ACCUFLO™ TECHNOLOGY

Introducing OPW's New AccuFlo Technology

The most accurate flow pattern for optimum dispensing performance

Today, auto manufacturers use OPW nozzles as the standard to confirm fill pipe design. Why? To ensure their vehicles are compatible with the nozzles found at more locations worldwide than any other – OPW nozzles.

Now, with the 21Gv ORVR nozzle, you not only get the nozzle excellence auto makers rely on, but you also get the world's most accurate flow pattern. All 21Gv ORVR nozzles come with **AccuFlo** to ensure maximum dispensing satisfaction – for you and your customers.

AccuFlo is highly engineered, patent-pending nozzle spout innovation, utilizing a specially designed spout.

AccuFlo generates the most accurate, cylindrical fluid flow pattern available today.

When fuel passes through **AccuFlo** it is formed into a consistent uniform flow that minimizes fuel turbulence, reducing splash back and premature shutoffs at the pump.

AccuFlo Technology:

1) Maximizes customer satisfaction
2) Captures potential lost revenue
3) Ensures environmental sustainability

Choose the OPW 21Gv with AccuFlo Technology.
