

INNOVATIVE. GREEN. ORVR-COMPLIANT

Bring Your Station Into Compliance by Simply Changing Your Nozzle to the OPW 21Gv ORVR Nozzle

Problem:

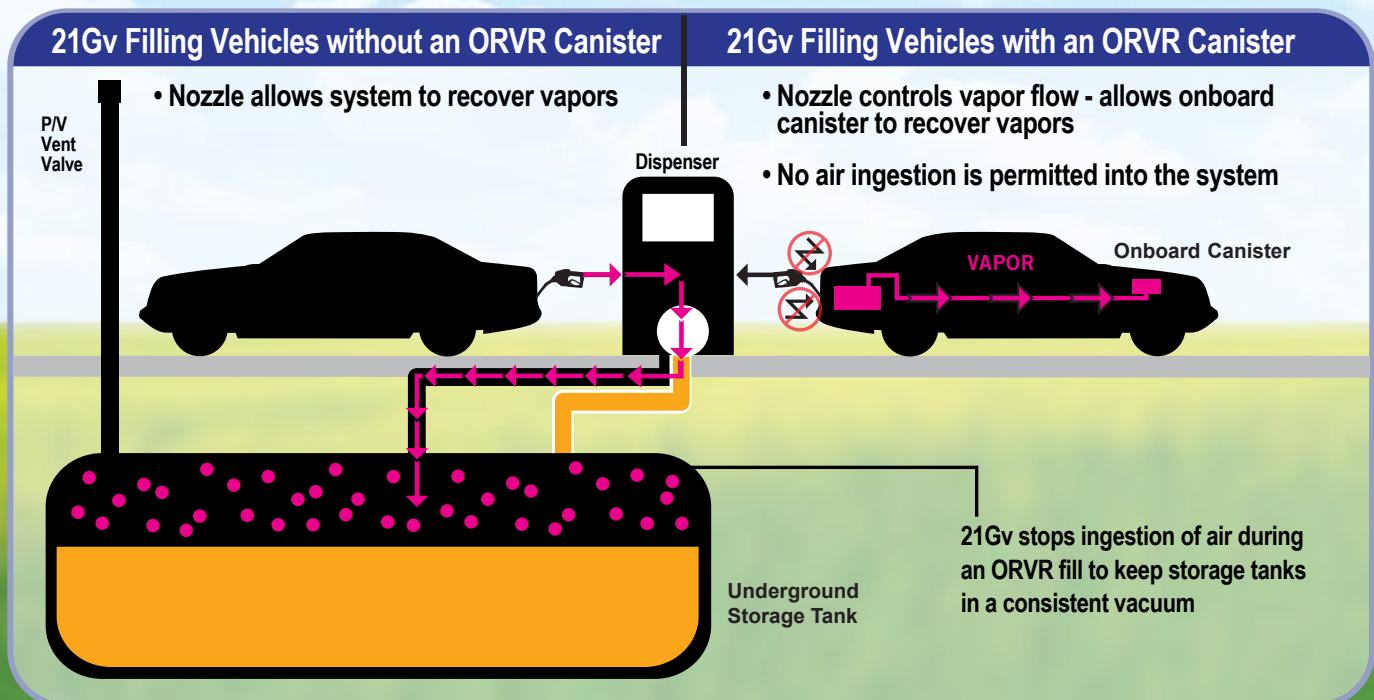

The 21Gv 21st century nozzle saves you money while keeping you in compliance.

- The 21Gv has a unique, built-in ORVR canister-sensing device to detect whether or not a vehicle has an onboard ORVR canister.
- If an ORVR canister is detected, the nozzle automatically shuts off the vapor flow to eliminate ingestion of air into your underground system.
- This revolutionary technology allows you to use standard, affordable and readily available vacuum-assist vapor recovery hoses, breakaways, swivels and whip hoses rather than expensive proprietary nozzles and hanging hardware required by all other ORVR solutions.
