

Kamvalok® Dry Disconnect Couplings

OPW Kamvalok® Dry Disconnect Couplings are considered the standard of the industry. Used at liquid transfer points where product loss could occur, OPW Kamvaloks® provide a reliable solution to prevent spillage during connection or disconnection.

BENEFITS

Spill Protection

Helps to reduce the hazards involved in the connection/disconnection process of transferring hazardous materials.

Provides for Total Closed-Loop Loading Capabilities

Keeps hazardous liquids and vapors in-line and out of the environment.

Dual Protection

Poppeted seal cylinder design provides automatic closure from both directions – the coupler and the adaptor to permit occasional spills.

Autolok™ Locking Arms

Provides added protection with an automatic locking mechanism signaled by a positive click. Release requires only an easy tug on the lock release.

SST Locking Lever Assembly

Locks in position to prevent accidental opening or closing of valve.

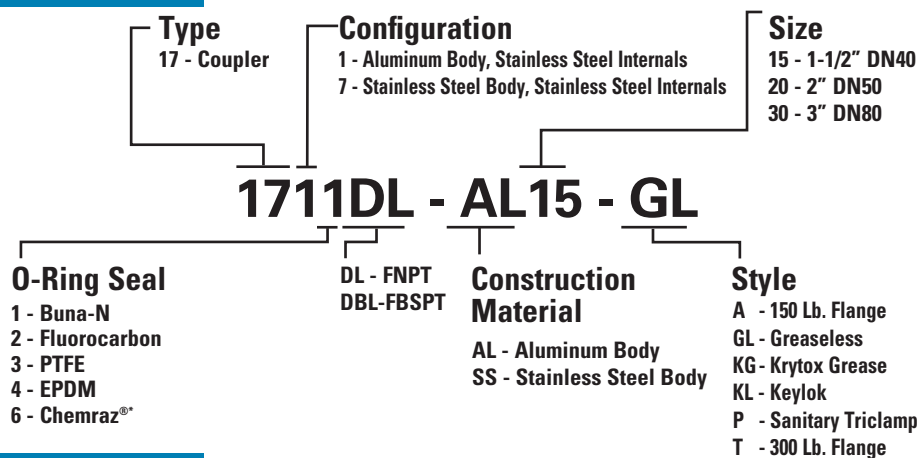

Ease of Use

Simple connection and disconnection design provides for smooth and easy operation.

INSTALLATION PREPARATIONS

WARNING: Read & understand these instructions before starting installation or dismantling:

- Coupler to be used for its designated purpose only
- Local regulations for (un)loading must be followed at all times
- Product flow may result in static electricity; grounding of equipment is required
- OPW instructions must be followed for installation or dismantling at all times
- Make sure to use adequate personal protection at all times during operation
- Secure whatever device coupler will be mounted to (e.g. loading arm, hose, etc.)
- Thread coupler onto pipe (use proper thread sealant)

MAINTENANCE

ATTENTION: The same risks and procedures of initial installation apply.

Consider the following when servicing the coupler:

- When coupler is over pressurized, it must be inspected thoroughly
- After maintenance is performed, it must be tested before the next use (see Testing After Servicing)
- Periodic inspection (every 3 months) for leakages (especially with toxic or hazardous mediums)
- Maintenance must be performed by authorized personnel
- Periodic maintenance (once a year) is required according to the maintenance instructions
- In case of (parts of) couplers being redirected, the initiator must provide information about the mediums, which have been in contact with (parts of) the coupler
- During maintenance, (partial) dismantling could be necessary; the same risks and procedures apply

DETAILED DISASSEMBLY

(for seal replacement)

Recommended Tools: Adaptor body of OPW Kamvalok® Adaptor, Flat Head Screwdriver, 17mm and 1-1/4" Driver and Torque Wrench

DISMANTLING WARNING: Verify what kind of medium is loaded with this coupler (read the manuals provided). When the medium is nuclear, hazardous or toxic, one is obligated to clean parts with the help of specialized personnel, companies or governments.

Step 1:

- Remove coupler from piping or hose
- Install adaptor and close Autolok™ arms
- Depress release latch and rotate lever only part of the way
- Do not rotate the lever into the fully opened position
- The adaptor is only in place to take the pressure off of the poppet

WARNING: With the release latch depressed, the operating lever is unlocked and can rotate. Do not unlock or apply pressure to the lever unless you are trying to open the valve. Use caution when working around the lever when the system is under pressure. Once the lever starts moving, pressure can cause it to rotate violently. Under pressure, poppet will cause lever to rotate violently, if not restrained.

Step 2:

- Remove shaft nut and lock washer from top of lever assembly
- Remove lever assembly from shaft
- Unthread stuffingbox and pull out shaft
- Pull stuffingbox off of shaft and remove the 3 O-rings from it
- Remove spacer from the shaft

WARNING: Use caution when performing this next step.

Step 3:

- While pressing the adaptor into the body, release the Autolok™ arms
- Slowly allow the adaptor, poppet & seal cylinder assembly to spring out of the body
- Once all spring pressure is relieved, you can remove the adaptor

move the poppet assembly, followed by the seal cylinder and spring

Step 4:

- Remove the seals from the seal cylinder
- Remove the seals from inside the coupler body
- Be careful not to scratch the sealing surfaces of the coupler body

Disassembly Complete:

- Clean and inspect all sealing surfaces after removing seals
- Install new seals and re-assemble coupler

IMPORTANT: OPW products should be used in compliance with applicable federal, state, provincial, and local laws and regulations. Product selection should be based on physical specifications and limitations and compatibility with the environment and materials to be handled. OPW MAKES NO WARRANTY OF FITNESS FOR A PARTICULAR USE. All illustrations and specifications in this literature are based on the latest product information available at the time of publication. OPW reserves the right to make changes at any time in prices, materials, specifications and models and to discontinue models without notice or obligation.

DETAILED REBUILD

Step 1:

- Lubricate o-rings with proper grease and fit into the grooves in the stuffingbox
- Lubricate stuffingbox threads
- Fit new o-rings into the grooves in the stuffingbox

Step 2:

- Carefully fit nose seal into seal cylinder and slightly expand sleeve bearing and fit into lubricated outer groove on seal cylinder
- Run finger over inside mating surface between nose seal and body to check for any uneven seating. If any raised edges exist remove nose seal and re-seat more evenly.

Step 3:

- Fit o-ring and gasket into body
- Gasket should be compressed slightly and allowed to spring into its groove

Step 4:

- With coupler body in a vertical position, insert cylinder spring & seal cylinder using the adaptor body to compress the spring and push all components into the body
- Use caution not to disturb the O-ring already installed in the body when working the seal cylinder into the opening
- Open the Autolok arms to allow the adaptor to fully seat in the coupler body
- Once the adaptor is fully seated, lock adaptor into body by closing Autolok handles

Step 5:

- Insert poppet linkage assembly through adaptor with cast "dots" on linkage components facing up towards stuffingbox area of coupler body

Step 6:

- Insert spacer through threaded end of the coupler
- Insert shaft through stuffingbox hole in coupler body
- Insert shaft through shaft link, aligning flats on shaft with flats on shaft link
- Insert shaft through spacer and into hole in bottom of coupler body
- When installed, the shaft and poppet linkage assembly should be oriented as shown

Step 7:

- Turn the shaft 90 degrees from the closed position to relieve the spring pressure on the linkage
- Install stuffingbox over shaft and thread down with a wrench until it is tight
- Using a torque wrench, tighten the stuffingbox to 960 inch-pounds (108 Newton-meter)
- Remove the adaptor from the coupler

Step 8:

- With the poppet in the outward position, install the handle as shown
- Secure the lever by threading the shaft nut with lock washer on the shaft
- Tighten the shaft nut to a torque of 290 inch-pounds (33 Newton-meter)

Step 9:

- Rotate the lever assembly into the closed position
- Assembly complete. Re-attach coupler to piping or hose.

Testing After Servicing:

- When servicing has occurred and parts have been replaced, it is necessary to test the coupler for a safe and secure use.
- Open Autolok™ handles, and bring coupler and adaptor together. Once fully seated, close the Autolok™ handles.

WARNING

Failure to follow these warnings could result in serious personal injury, property damage or product failure.

1) Do not attempt any maintenance service while the equipment is in operation. System pressure must be relieved and the product drained before attempting any service on the unit. The line must be locked out while service is in progress. Proper thermal relief must be provided at all times while equipment is in service.

2) OPW products do not eliminate possible exposure to hazardous substances. The conditions of handling and use are beyond our control, and we make no guarantee and assume no liability for damages or injuries related to the use of our products. Follow the safety precautions outlined in the Material Safety Data Sheets for the material being used. It is the responsibility of the user to comply with all federal, state and local regulations. Always employ proper safety precautions and handling techniques.

3) Proper seal and wetted material part selection is critical for safe operation. To assure maximum life for the service intended, use only those materials compatible with the fluids being handled. Please note material being supplied and make certain that it is suited for the intended service.
