Patent Pending

Testable 7150

Overfill Prevention Valve

Are you Prepared for New EPA Overfill Valve Test Requirements?

**NEW!**

Spend 60 Seconds vs 60 Minutes per Tank!

Now you can be with the New OPW Testable 7150 Overfill Prevention Valve

*The easiest, most affordable way to ensure overfill compliance*

- UST systems (drop tube, overfill prevention valve, spill containers) must be tested for vapor tightness
- Overfill prevention valves shut off devices must be manually inspected
The OPW Testable 71SO helps you prepare for these regulations:

- The Only UST Overfill Prevention Valve that is testable without removal from the tank
- A testable feature is attached to a sealed plug in the inlet Adaptor
- The plug is easily accessed with a standard socket extension
- Attached to the extension, the testable feature can be raised and lowered, allowing the user to inspect the valve operation from the inside of the tube
- The plug is then easily reinstalled to the inlet Adaptor from grade
- No fill components, overfill valves, or vapor tight seals have to be removed - avoids compromising vapor tight compliance
- The Testable 71SO uses the same industry leading overfill prevention technology for strong vapor tight compliance

NOTE: The OPW 71SO is designed for use on tight-fill gravity drop applications only. Do not use for pressure fill applications.
