

Eliminate Cold-Weather Leaks!

Now you don't have to wait for the temperature to rise

As temperatures drop, does your confidence in the sealing ability of your API Bottom-Loading Couplers also experience a decline? In the past, the only solution to leaking bottom-loading couplers in low-temperature environments was a simple—but frustrating—one: wait for the temperatures to rise.

OPW Engineered Systems Low-Temperature Seal-kit Protects

OPW Engineered System has put an end to that discouraging waiting game with the announcement that the 1004D3 and 1004D4 models of its API Bottom-Loading Couplers are now available with a special “lo-temp” sealing material with a temperature rating as low as -55°F (-48°C). This new compound retains its sealing capabilities in the coldest environment, while also being compatible with all gasoline, diesel and ethanol formulations and blends.

Also available for Swivel Joints
