TECHNICAL SERVICE BULLETIN (TSB) 20221212-01 Issued: December 12, 2022

Revised Midland Model Numbers for PRV Component Tracking in RailInc

Scope: This TSB alerts tank car owners, lessees, and repair shops of changes to the RailInc permissible values for Midland pressure relief valve model numbers. The new model numbers should be used when registering Midland PRV CIDs in RailInc. No changes are required for existing registrations or associations.

Background: Since the launch of Component Tracking in July 2021, Midland's PRV model numbers were grouped into series (A-1000 SERIES, A-2000 SERIES, A-3000 SERIES, etc.). However, some Midland PRVs were grouped outside of this core series according to AAR design approval (e.g. A-2095/A-2097/A-2099, A-22075/A-22076). To reduce confusion and align with the complete part number on the nameplate, the new model number for CID registration will be the first string of the part number as shown below.

Exception: Midland PRVs now follow this template for all model numbers except the A-14167-KY and A-14167-3KY series. For the A-14167-KY/3KY valves, include the -KY or -3KY as shown below.

A-14167-KY-RTVGFS

PRV Model Number for KY Series

A-14167-3KY-EPDM

PRV Model Number for 3KY Series

Please contact Midland Engineering with questions.

This TSB is based on extensive testing and performance experience and is the most current information available. Midland reserves the right to make changes in specifications and other information contained in this document without prior notice. The users should in all cases consult Midland to determine whether any such changes have been made.
