IntelliSense™ Technology

Streamline Sensor Maintenance with IntelliSense™

When paired with OPW sensors, OPW’s IntelliSense™ Technology simplifies sensor maintenance and delivers superior monitoring of fuel containment and storage areas.

IntelliSense™ Technology

OPW’s IntelliSense™ Technology interfaces with OPW’s comprehensive line of discriminating and non-discriminating sensors to communicate connection statuses and sensor types to SiteSentinel® iSite™ and Integra tank gauges. This capability significantly simplifies sensor maintenance processes and record-keeping for fuel sites of every size and configuration.

Applications

- Monitor all areas of the fuel site including tank interstice, piping sumps, STP containment sumps, dispenser sumps/ pans and monitoring wells
- Interface all sensors through a single 3-core cable connection for reduced equipment costs
- Integrates seamlessly with SiteSentinel® iSite™, Integra 100™ and Integra 500™ tank gauges

Contact your OPW representative to learn more about innovative IntelliSense™ Technology today!

Phone: (708) 485-4200  Fax: (708) 485-4630  6900 Santa Fe Drive  Hodgkins, Illinois USA 60525  www.opwglobal.com

IntelliSense™ Technology

IntelliSense™ makes innovative sensor technology even smarter by communicating the connection status and sensor type to compatible SiteSentinel® tank gauges

MAINTENANCE LOG

IntelliSense™ technology and compatible SiteSentinel® tank gauges keep track of replaced sensors by recording the sensor’s serial number and date and time of its replacement

COMPLIANCE

OPW’s full line of discriminating and non-discriminating sensors monitor all critical areas of a fuel site, helping managers meet stringent environmental compliance standards

COST SAVINGS

The IntelliSense™ technology allows sensors to be multi-dropped during an installation, eliminating a wiring home-run for each sensor

Leading The Way in Fluid Handling Solutions Worldwide

**IntelliSense™ Technology**

**Discriminating Dispenser Pan Sensor**
Provides the ability to detect a low and high liquid level and distinguish whether the fluid is water or hydrocarbons. Detection of fuel or water will result in an alarm condition at the console. Detection of a fuel or high-water condition is useful to disable dispenser power to ensure protection of the environment. This feature assures that an alarm condition is sounded if the cable to the sensor breaks or if the sensor malfunctions.

Part Number: 30-0232-DH-10
Application: Dispenser pans
Detects: Fuel, water – high and low level
Differentiates: Fuel vs. water
Product Detection: 1.25 in (3.17 cm) fuel only - 1.25 in (3.17 cm) fuel on water
Operating Temp: -40°F to 150°F (-40°C to 65°C)

**Discriminating STP Sensor**
Provides the ability to detect a low- and high-liquid level and distinguish whether the fluid is water or hydrocarbons. Detection of fuel or water will result in an alarm condition at the console. Detection of a fuel or high-water condition is useful to disable STP power to ensure protection of the environment. This feature assures that an alarm condition is sounded if the cable to the sensor breaks or if the sensor malfunctions.

Part Number: 30-0232-DH-20
Application: STP Sumps
Detects: Fuel, water – high and low level
Differentiates: Fuel vs. water
Product Detection: 1.25 in (3.17 cm) fuel only - 1.25 in (3.17 cm) fuel on water
Operating Temp: -40°F to 150°F (-40°C to 65°C)

**Discriminating Interstitial Sensor**
Utilizes a solid-state optical technology to detect the presence of fluid in the annular space of a tank and distinguish whether the fluid is water or hydrocarbons. Detection of fuel or water will result in an alarm condition at the console. This feature assures that an alarm is sounded if the cable to the sensor breaks or if the sensor malfunctions.

Part Number: 30-0236-LW
Application: Tank Interstice
Detects: Fuel, water
Differentiates: Fuel vs. water
Product Detection: Fuel or water 0.63 in (1.59 cm)
Operating Temp: -40°F to 176°F (-40°C to 80°C)

**Sump Sensor, Float Switch**
Designed to detect the presence of fluid in a containment sump/pan. Additionally, this feature assures that an alarm is sounded if the cable to the sensor breaks or if the sensor malfunctions.

Part Number: 30-0231-L
Application: Dispenser pans/transitions
Detects: Fuel, water
Product Detection: Min. height 1.50 in (3.81 cm)
Operating Temp: -40°F to 150°F (-40°C to 65°C)

**Hydrocarbon Vapor Sensor**
Designed for the early detection of the presence of hydrocarbon vapors in dry monitoring wells and interstitial spaces of a double-wall tank. The sensor is recoverable from detection and will return to its normal state after the vapors have dissipated. This feature assures that an alarm is sounded if the cable to the sensor breaks or if the sensor malfunctions.

Part Number: 30-0235-V
Application: Dry monitoring wells, double wall tank interstice
Differentiates: Fuel
Product Detection: Hydrocarbon vapor
Operating Temp: -40°F to 150°F (-40°C to 65°C)

**Interstitial Hydrocarbon Liquid with Water Indicator**
Designed for use in a double-wall fiberglass tank to detect the presence of fluid and distinguish between fuel and water. This feature assures that an alarm is sounded if the cable to the sensor breaks or if the sensor malfunctions.

Part Number: 30-0234-HW-01
Application: Interstitial space of double-wall fiberglass tank
Differentiates: Fuel vs. water
Product Detection: Requires min. 0.10 in (0.25 cm) fuel to activate
Operating Temp: -40°F to 150°F (-40°C to 66°C)

**Discriminating Fuel/Water Monitoring Well Sensor**
Provides the ability to detect the presence of hydrocarbons floating on the surface of water in a groundwater monitoring well. It’s also able to detect when the water in the monitoring well has dropped below the sensor, making the detection of hydrocarbons no longer possible. The system will activate an alarm condition indicating that the monitoring well is dry and environmental protection has been compromised. This sensor is used for monitoring wells that are 6 to 20 feet (1.83 to 6.09 meters) deep.

Part Numbers: 30-0234-HW-06 [6.0 ft (1.83 m)], 30-0234-HW-15 [15.0 ft (4.57 m)], 30-0234-HW-20 [20.0 ft (6.09 m)]
Application: Wet monitoring wells
Detects: Fuel on water surface
Differentiates: Fuel on water or when water drops below sensor
Product Detection: As little as a 0.10 in (0.25 cm) fuel on water
Operating Temp: 32°F to 122°F (0°C to 50°C)

**Dual-Float Brine Sensors**
The dual float brine sensor measures the level of brine solution in a dispenser sump or fiberglass tank. The bottom float of the brine sensor will remain floating under normal conditions. If the bottom float drops, it will trigger a low liquid alarm; if the brine sensor’s top float begins floating, it will trigger a high liquid alarm.

Part Numbers: 30-0232-D-10B (dispenser sump) and 30-0232-D-20B (fiberglass tank)
Application: Measures brine solution in dispenser sump and fiberglass tanks
Detects: Low liquid, high liquid
Operating Temp: -40°F to 158°F (-40°C to +70°C)
