OPW 14HC HiFlo Diesel Capture Nozzle

Dear Valued Distributor:

Everyone likes to begin the new year with a clean start. If one of your New Year's resolutions is to provide your customers with the latest and greatest fueling equipment and help them provide the best possible re-fueling experience at their site, then OPW is here to make sure that resolution becomes reality. The retail fueling market has been asking for a cleaner nozzle. Specifically at Truck Stops and retailers offering High Speed Diesel lanes. OPW is happy to announce the release of our 14HC 1" diesel nozzle for high flow dispensers. Just in time to help you get a "Clean Start" to the New Year!

In 2019 OPW launched our **14C Diesel Capture Nozzle**. Marketers were quick to realize the effectiveness of our design and voiced their need to broaden these benefits to all their diesel islands. We are excited to announce that we have adapted OPW's patented Diesel Capture technology to high-flow applications. On **January 2nd, 2023**, we launched the new, highly anticipated **14HC HiFlo Diesel Capture Nozzle**.

The Diesel Capture technology focuses on improving the customer experience by keeping the nozzle clean and assists in a cleaner dispenser and forecourt. After the diesel fueling process, any excess fuel runs down the spout and is securely captured into a chamber. The resulting cleaner nozzle and dispenser make it more attractive for customers to use. Statistics have shown that customers' primary condition for where to stop at a gas station or truck stop is cleanliness. Furthermore, it reduces the maintenance/cleaning costs for gas station and truck stop owners.

The 14HC Nozzle is cULus listed, is standard rated up to B-20, and is available in extreme cold versions. You can download the latest 14 Series Nozzle brochure below which now includes the newest addition to the family. You can also download specific information on the 14HC nozzle with part numbers and available options.
