DEFINING | WHAT'S NEXT IN FUELING SOLUTIONS WORLDWIDE

Since 1892, OPW has been Leading the Way and Defining What's Next in fluid-handling solutions worldwide. The OPW brand represents an implicit promise of trust to its customers and distributors. A promise backed by an unparalleled heritage of innovation, quality, reliability, safety, efficiency, sustainability and availability.

As an organization, OPW Retail Fueling consists of three global operating units worldwide and multiple manufacturing operations in North America, Europe, United Kingdom, China and India, and sales offices around the globe.

OPW Retail Fueling is part of the Clean Energy & Fueling segment of Dover Corporation (NYSE: DOV).

It is our mission to revolutionize fluid-handling and refueling operations globally by optimizing safety, efficiency, reliability and environmental sustainability through innovative fluid handling, piping and containment, valves and fittings, and refueling nozzles.

Combine OPW Retailing Fueling's aboveground and underground solutions and you get the only end-to-end solution from a single source in the industry – an integrated solution where every component is designed and manufactured to work in unison and provide the petroleum industry's most comprehensive and innovative refueling system.

OPW Retail Fueling consists of four key areas of operation – Nozzles and Accessories, Underground Storage Tank Equipment, Piping & Containment Systems, and CleanEnergy Fueling Products. Specifically designed to optimize fuel-transfer efficiency and environmental protection at commercial and retail-fueling sites, OPW is the brand specified by more fueling operators worldwide than any other.

We are a brand known as much for our character as for our great products. Operators around the world know they can trust OPW to consistently deliver the kind of high-quality fluid-handling solutions they need to meet their business requirements and to help them fulfill their individual goals of social and environmental responsibility today and into the future.

OPW Innovative Fueling Solutions

The heart of FlexWorks is an advanced, flexible piping system that can be installed quickly and easily in a variety of configurations. Flexible piping eliminates the need for buried piping joints, which are notorious leak points in rigid piping systems. In a pressure system, the submersible pump is connected in series directly to the dispensers with a continuous run of flexible pipe. In a suction system, a continuous run of flexible pipe connects the tank to the suction pump dispenser. All piping connections at the tank and dispensers are contained in sumps.

The primary fuel pipe is available with an integral secondary containment pipe, which can be inserted into a dual-layer, corrugated access pipe. The crush-resistant access pipe protects the primary pipe from the backfill while serving as an added layer of protection. The access pipe also affords the added advantage of primary pipe retractability. Future inspection, repair or replacement of the primary pipe is achievable without excavation.

The FlexWorks System features highly integrated components that interconnect seamlessly to provide reliable secondary containment. FlexWorks dispenser sumps are custom made for each particular dispenser footprint. FlexWorks tank sumps afford raintight containment for and accessibility to submersible pumps and UST equipment. A variety of FlexWorks entry fitting styles and sizes ensure the availability of a custom-designed solution for virtually every piping application.

FlexWorks by OPW is the complete Environmental System for underground fuel transfer and containment for the 21st century.

Listings and Certifications

FlexWorks Supply Piping

Why flex pipe?

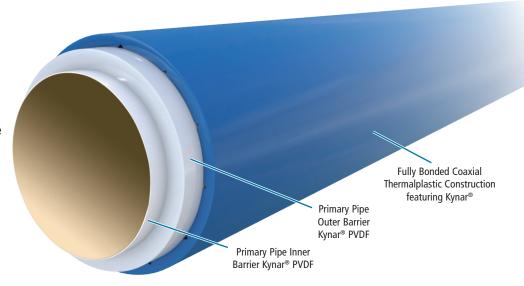

OPW developed FlexWorks pipe in response to customer feedback. You asked and we delivered! The pipe is more flexible, lighter and has reduced memory. Pipe can also be replaced without breaking concrete.

Elimination of potential underground leak points

- No underground fittings or joints
- No hand-built field joints
- All termination points are contained safely inside sumps
- Termination joints are precision coupled to simulate factory-made assemblies

FlexWORKS

THE WORLD'S MOST SPECIFIED FLEXIBLE FUEL-TRANSFER PIPE

Light, Flexible & Easy to Install. ULc Approved for All Fuels

What Makes This Pipe Different? Lower installation costs

- Eliminates the hassles –
 installation time and potential leak
 points of rigid pipe installations
- Fast and easy installation results in less installation labor, time and cost
- Eliminates burdensome cutting, fitting, and cleaning
- No adhesives heat assists, curing problems or electrofusion welding of joints
- ◆ Easy to bend no special fittings to install in order to make bends

Double-Wall Flexible Vent Piping: UL971-Listed, Integral Primary/Secondary, Normal Vent & Vapor Piping, Gasoline, Aviation & Marina Fuels:

A UL-listed, double-wall, flexible supply piping system is designed for installation within access piping (not required but recommended).

The outer containment pipe includes inner stand-off ribs to create a small interstitial space which allows for optimum fluid migration, continuous monitoring and easy periodic testing. This piping features an enhanced construction that meets the new UL971 standard. OPW's FlexWorks double-wall piping has both the primary and secondary containment pipe UL-listed and is labeled as follows:

INTEGRAL PRIMARY/SECONDARY FOR MOTOR VEHICLE FUELS.

Flexible Piping Manual Order Number: UPM-0001

FlexWorks Supply Piping

OPW's FlexWorks Pipe is more flexible, lighter and has reduced memory to aid installation and is UL approved for all fuels.

Note: Discounted short runs available while supplies last. Please contact Customer Service for availability and pricing.

^{*} OPW also offers short and custom lengths of pipe, as well as pipe packaged and shipped on Mega Reels. Please contact our Customer Service department at 1-800-422-2525, or visit us on the web at www.opwglobal.com for the most up-to-date information.

Access Pipe

A 4"or 6" diameter corrugated flexible conduit is used to provide access to and permit the future replacement of the flex piping if desired. This corrugated pipe is strong enough to withstand H-20 loading requirements when properly buried and thick enough to minimize damage from shipping and jobsite handling. Access pipe can accommodate the 3/4", 1", 1-1/2", 2" and 3" FlexWorks supply pipe.

Features & Benefits:

- Crush and puncture-resistant
- Semi-smooth liner facilitates ease of installation
- Saves you time and money
- No buried joints

FlexWorks Vent Piping

Why flex pipe for venting?

OPW developed FlexWorks Vent Pipe in response to customer feedback and alternatives to FRP vent piping. You asked and we delivered! The pipe is more flexible, lighter and has reduced memory. Our vent pipe is available with the typical short lead times you have come to enjoy from OPW!

Elimination of potential underground leak points

- Continuous piping runs between tank and vent stacks
- No hand-built field joints
- Stainless-steel fittings for worryfree corrosion resistance
- Can be used with either OPW 2"
 DPC swage-on or SBC bolt-on double-wall couplings

Light, Flexible & Easy to Install. ULc Approved for Venting with All Fuels

Celebrating More Than 25 Years of **Success** Through Piping Excellence

What Makes This Pipe Different? Lower installation costs

- Eliminates the hassles –
 installation time and potential leak
 points of rigid pipe installations
- Fast and easy installation results in less installation labor, time and cost
- Eliminates burdensome cutting, fitting, cleaning, gluing or welding
- No adhesives heat assists, curing problems or electrofusion welding of joints
- Easy to bend no special fittings to install in order to make bends
- Vent Pipe Kit to seal off interstitial testing port when directly burying DW fittings

Double-Wall Flexible Vent Piping: UL971-Listed, Integral Primary/Secondary, Normal Vent & Vapor Piping, Gasoline, Aviation & Marina Fuels:

A UL-listed, double-wall, flexible supply piping system is designed for installation within access piping (not required but recommended).

The outer containment pipe includes inner stand-off ribs to create a small interstitial space which allows for optimum fluid migration, continuous monitoring and easy periodic testing. This piping features an enhanced construction that meets the new UL971 standard.

OPW's FlexWorks double-wall piping has both the primary and secondary containment pipe UL-listed and is labeled as follows:

INTEGRAL PRIMARY/SECONDARY FOR MOTOR VEHICLE FUELS.

Double-Wall Swivel Pipe Couplings

Double-Wall Swivel Pipe Couplings are a proven coupling and fitting system designed exclusively for use with FlexWorks Piping.

Double-wall swivel couplings and fittings are a double-wall design and are used to interconnect FlexWorks flexible piping. These UL/ULc listed stainless-steel couplings must be contained within containment sumps and not directly buried.

This pipe-connection system includes an internally expanded stainless-steel coupling attached to the end of a FlexWorks pipe section. The swivel coupling has a smooth sealing face fitted with a Viton® ring gasket.

Double-wall swivel couplings eliminate the need for cutting back the secondary jacket and rubber test boots. They have an integral interstitial access port for connector and test tubes.

These double-wall couplings permit higher interstitial testing pressures and eliminate added parts and labor costs.

Double-Wall Pipe Coupling (DPC Model)

Double-wall pipe couplings require the use of an OPW Retail Fueling coupling machine to internally expand the stainless-steel fitting onto the end of a FlexWorks pipe section.

Internally expanded couplings have a long, successful history of reliable performance.

Features & Benefits:

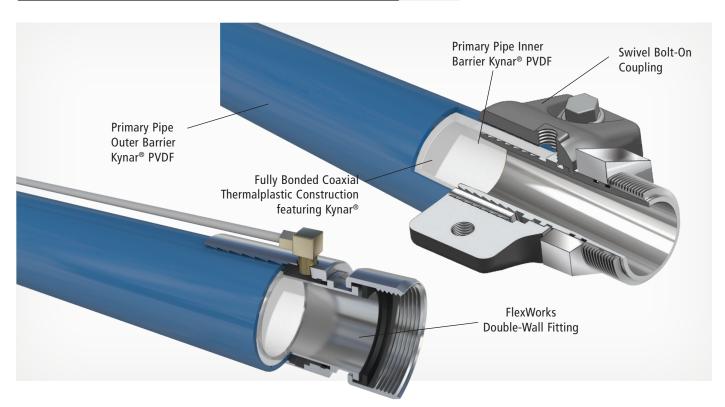

- UL/ULc listed for use with flex piping
- Quick, easy to install
- All stainless-steel couplings
- Internally expanded couplings
- Permanent Interstitial Test Port

3" Double-Wall Coupling

- Fully compatible with our 3" FlexWorks Piping
- Interstice integrated with the pipe secondary

OPW 21BV Full Port Two-Way Ball Valve

OPW Ball Valves are used throughout fueling systems where a shut-off point is desirable to isolate a section of the piping system. These full-port, forged-brass valves feature a manual open-close arm and a quick quarter-turn handle, allowing easy shut down of your AST or UST system. Compatible with gasoline, alcohol fuels, diesel and MTBE. Available with Lockable Handle (LH).

OPW Retail Fueling Introduces a Next Generation of Swivel Bolt-On Couplings

Announcing our revolutionary new SBC Swivel Bolt-On Double-Wall Pipe Coupling. The new patent-pending technology gives users the same great features as our revolutionary DPC swage-on double-wall fittings in a bolt-on design. The SBC eliminates the need to trim back the secondary jacket — and eliminates the need for rubber test boots!

Features and Benefits

- All Stainless-Steel Wetted Surfaces
- No Jacket Stripping
- No Test Boots
- Male NPT thread allows this coupling to be used with standard plumbing Tees and Flbows
- Decreased installation time
- Provides quick and effective means to monitor or retest secondary containment
- State-of-the-art clamshell interlock design only available through OPW
- Double O-ring swivel design for easy and secure connections

New patent-pending Swivel Bolt-On Coupling system simplifies the interstitial connection process for FlexWorks Flexible Piping.

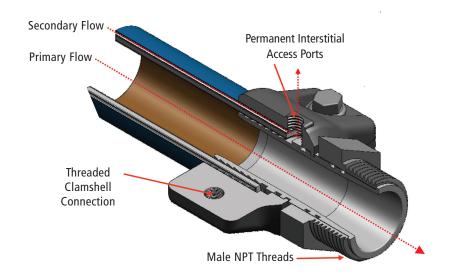

Our new FlexWorks Swivel Bolt-On Coupling features permanent access to the pipe's interstice allowing for future integrity testing or continuous interstitial monitoring. Swivel Bolt-On Couplings have an integral interstitial fluid path and a threaded access port located directly on the coupling collar. This state-of-the-art method of connection is a cost-effective solution that allows rapid system integrity testing as well as interstitial monitoring capability, at installation and in the future to accommodate new monitoring regulations.

Installation Tools Coupling Machines

The OPW Coupling Machine is required for the installation of both coax and swivel pipe couplings. The Coupling Machine is designed to internally expand the metal pipe insert installed at the end of a flexible pipe section. Coupling machines are available in both 110- and 220-volt models. Coupling swage kits are available to couple both coax and swivel couplings for a variety of pipe sizes.

*IMPORTANT: When coupling 3/4" and 1" pipe, use the faceplate for the CSK-0150S swage kit as a base for the CSK-0075S and the CSK-0100S swage kits.

Manual, Pneumatic and **Electronic Coupling Machines**

The OPW Manual, Pneumatic and Electronic Coupling Machines can couple stainless-steel (SSPFC), Swivel (SPC) and Double-Wall (DPC) fittings for 1.5" and 2" only. Swage kits are required.

Ordering Specifications Coupling Machine

Pipe Cutters

The FlexWorks pipe cutter is designed to produce a clean and even pipe cut, which is necessary for proper coupling attachment. This is required for installation of swivel pipe couplings.

The PCT 2000 makes it easy to cut through OPW FlexWorks pipe up to 2" with a clean, professional-quality finish. The Teflon®-coated hardened steel blade makes clean, burr-free cuts repeatedly, and the spring-loaded ergonomic handle provides a comfortable grip for extended use.

NOTE: When using double-wall pipe couplings, do not trim piping secondary.

Ordering Specifications-Pipe Cutter

Model #	Application
PCT-2000	3/4", 1", 1.5", 2"
PCT-3000	3" Pipe Cutter

Fishing Bullnose

An attachment for the end of a flexible pipe section, used to aid in fishing the flexible pipe section through the access pipe. There are a variety of bullnoses available to connect to swivel couplings.

NOTE: 3/4" and 1" fishing bullnose are female threaded to accommodate 3/4" or 1" couplings.

Ordering Specifications - Fishing Bullnose

Model #	Application
FBN-2075	³/4" Fishing Bullnose
FBN-2100	1" Fishing Bullnose
FBN-2150	1.5" Fishing Bullnose
FBN-2200	2" Fishing Bullnose
FBN-2300	3" Fishing Bullnose
FBN-3200	2" Bullnose Plug

Barbed Fittings and Adaptors for FlexWorks Primary Pipe

OPW Retail Fueling's barbed fittings are a single-wall design and are used to connect Flex or Vent piping. This piping-connection system does not require the use of pipe couplings or the OPW Retail Fueling coupling machine. These fittings should be contained within containment sumps or protected in direct-bury applications.

Barbed Male Adaptors

An adaptor is designed to connect one end of a flexible pipe section to a female NPT-threaded coupling or fitting. There is a barbed insert with a clamp assembly on one end and male NPT threads on the other. When used with double-wall FlexWorks piping, it is recommended that a reducer test boot be installed. These adaptors are required to be secondarily contained.

Features and Benefits

- For use with FlexWorks piping
- No coupling machine required
- All stainless-steel clamps
- Barbs are offset
- Interlock design

OPW Offers a Variety of Tank Sump Models Made From Both Polyethylene and Fiberglass

OPW tank sumps function as a liquid-tight isolation container providing secondary containment for the tank fittings, valves, pumps and FlexWorks pipe fittings.

They also provide surface access to the tank itself, as well as a clean, dry environment for future service and maintenance. All tank sump models have height-adjustable risers to accommodate different tank burial depths. Each sump model has its own specific range of height adjustability and are fabricated and assembled at the job site.

Order Number: TSM-0001

ElectroTite Tank Sump

Introducing the latest OPW tank sump innovation from the engineering labs of FlexWorks and Fibrelite. ElectroTite is the most watertight system on the market. It ships factory installed with conduit ports and electrical wiring box - eliminating unnecessary tank sump leak points at site installation. No drill, no water, no sweat.

Features & Benefits:

Watertight:

- Reduces the number of entry and leak points into sump
- Sealed conduit threads on outside of sump – enter above water table
- Factory-installed fitting with proper torque guns, cutting tools and sealing compound

Materials:

Versatile for Your Installation:

- UL-listed explosion-proof junction box allows space to re-route communication wires and loop additional sensors without entering sump
- Shield allows for high-voltage and sensor wires to be separated in the same box
- Conduits can be potted entering box, exiting box, or both using built-in electrical seal-offs

33 = 33"

Sump Lid

Diameter

(WT-37)

 UL-listed explosion-proof box is single-piece cast aluminum, with bolt-on access cover

Factory Installed:

- Eliminates the need to cut holes in sump for conduits
- No field-installed conduit penetrations

FibreTite Tank Sump

From the engineering labs of Flexworks and Fibrelite, OPW has made the best even better. Meet the newest member of the FibreTite Family of sumps, the most watertight sumps on the market today. Designed to meet all the new 2018 EPA UST regulations.

Features & Benefits:

- The only sump manufactured using superior Resin Transfer Molding (RTM) technology. The RTM process utilizes a two-sided mold to ensure consistent wall thickness and exceptionally smooth wall surfaces inside and out for an ultra-tight entry fitting sealing surface
- Two-piece top-hat design allows for tailored height adjustments

- Inverted U-Channel allows for equal resin distribution, creating a superior bond between the base and the top hat to eliminate water intrusion
- Stainless-steel ring and watertight sealing gasket provide the proven seal-ability of our world-renowned Fibrelite sumps
- Available with and without bottom for collar or flange mounting
- Ergonomic "L-Handle" provides ease of use and a visual indicator that the handle is in the locked position and the watertight lid is secure

TSE Tank Sump

Using the same innovative Advanced Composite Technology as the DSE, OPW is proud to introduce the TSE Tank Sump.

The industry's first all fiberglass/composite containment system utilizing sheet molded compounds (SMC) to create a high-quality solution that quickly creates cost-effective peace of mind for retail petroleum operators.

Smooth Sides, Inside and Out

As the only manufacturer in the industry using Advanced Composite Technology, OPW's E-Series are the only fiberglass sumps with smooth walls on the inside and outside of the sump. Smooth sides bond better to prevent leaks and other maintenance needs.

Materials:

Body: Fiberglass

Cover/Lid: Fiberglass

Water Tight Seal: Stainless-

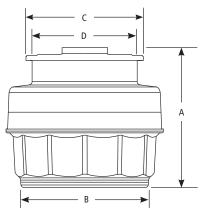

Steel/Nitrile

Compression Seal: Nitrile

Features & Benefits:

- The shortest lead times of any fiberglass sumps in the industry
- Consistent thickness and smooth surfaces for a watertight seal
- Built with legendary OPW quality, service, support and value
- Value-priced to compete against any fiberglass sumps on the market

Polyethylene Tank Sumps with Mechanically Fastened Covers

Features & Benefits:

- Long-Term Watertight Performance/Strength & Rigidity
 - one-piece design provides reliable watertight integrity and long product life. Designed to resist deformation under burial and high water-table forces
- Installation Flexibility multiple flats provide maximum area for locating pipe entries
- Easy Field Height Adjustability the special ribbed height adjustment design makes adjustments to finished grade, if necessary, quick and easy

4" Tank Fitting Adaptor – No-Bolt Style (TFA-4090)

4" Sump Inspection Port (SIP-4) Includes Urethane Sealant (SL-1100)

Sump Inspection Ports

Our no-bolt style mounting flange,

model TFA-4090, is also used to mount FlexWorks tank sumps to 4" underground storage tank bung fittings and attaches to the bottom of the sump base to provide a secure and liquid-tight connection. This model has compression studs for added stability and fast and easy installation with a socket wrench.

Tank Sump-

Mounting Flanges

FlexWorks tank sump-mounting flanges are used to mount FlexWorks tank sumps to 4" and 6" underground storage tank bung fittings. Flange top models (SMF-6) provide added flexibility in positioning of pump or extractor outlets. First, the riser or extractor is threaded into the top flange. The top flange is then oriented and bolted to the mounting flange.

FlexWorks optional sight-glass kits include urethane sealant (SL-1100).

HIFLO DISPENSER SUMPS

Loop System Dispenser Sumps are shipped complete with factory-installed pipe entry fittings, OPW 10 Plus Shear Valves, and Stabilizer Bars. Each Dispenser Sump has been assigned a custom Sump Configuration Number based on the number and position of pipe entries into the sump. Each Sump Product Number reflects this configuration number as well as materials used and for the application needed. The guide below explains the Product Number in detail.

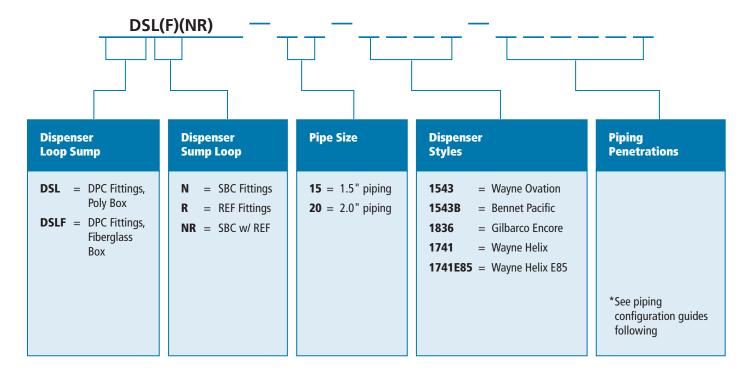

Benefits

- 50% Faster Installation Times
- 100% Accessible No Breaking Concrete
- Double Containment Protection
- Completely Testable
- End-to-End Monitoring
- Fewer Parts to Stock and Install

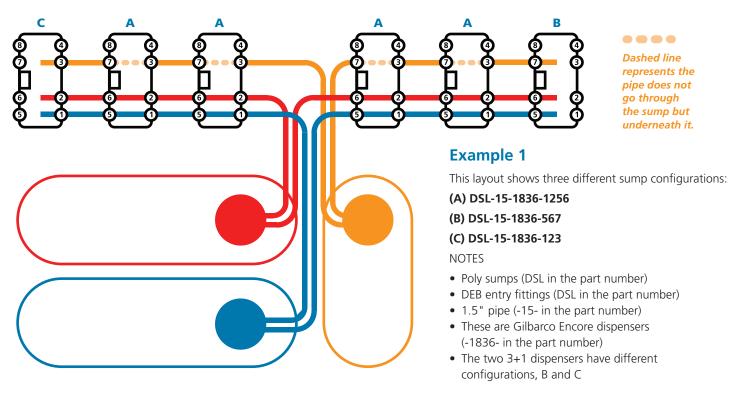

For high-flow applications, see HiFlo Ordering Guide on page 28.

The patented OPW HiFlo Loop System™ represents the state of the art in Retail Fueling containment technology offering a completely integrated, environmentally secure underground fuel-delivery system. By design, the system employs pre-fabricated and factory-assembled components resulting in dramatically less field labor, lower associated costs, and reduced potential for installation errors. The installed product preserves complete underground access to all piping connections, piping runs, and containment sumps. This unprecedented level of access allows for hassle-free inspections and maintenance without ever having to disrupt the business of the site with excavation. The HiFlo Loop System incorporates field-proven OPW technology to provide the same peace-of-mind that customers have come to expect from the traditional Retail Loop System.

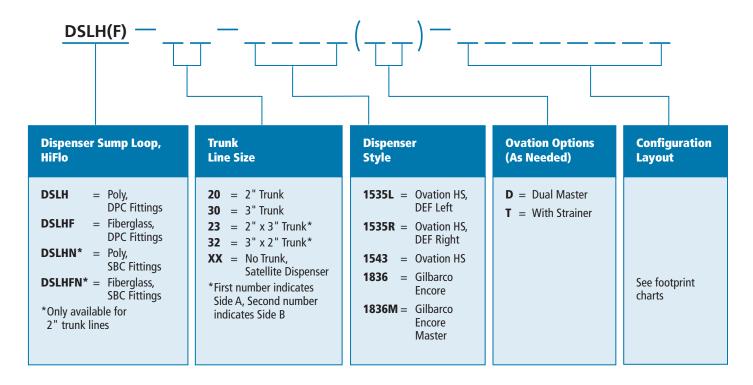

Benefits

- Compatible with Ovation and Encore High-Speed Dispensers
- Configurable for any Master->Satellite setup
- New 2" 10 Plus provides best-in-class flow and protection
- New Hybrid Entry Fitting (HEF) combines the benefits of REF outside the sump with the flexibility of DEB on the inner sump

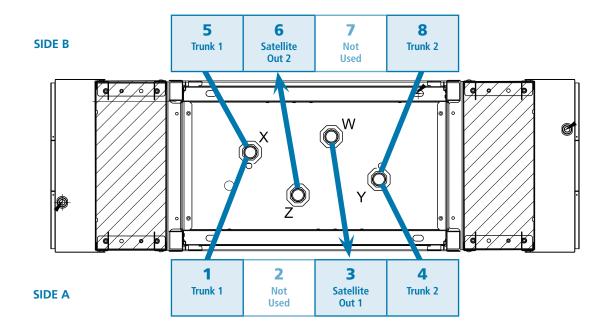

- The OPW HiFlo Loop System™ Providing a radically new solution to minimize traditional fuel-delivery system problems.
- **The End Result** An exponentially higher level of environmental protection and lower cost of fuel-delivery system ownership.

DEF Loop Configuration Ordering Guide*

Starting with 2010 models, DEF is now required in diesel-powered trucks utilizing Selective Catalytic Reduction (SCR) to meet federal emissions standards. The dispensing infrastructure at travel centers and fleet refueling sites continues to evolve as DEF-compatible equipment is Installed. OPW's new 60V-DEF-SS Shear Valve body is made of 100% stainless-steel construction for unmatched compatibility. This double-poppet shear valve is third-party tested to ensure compatibility with the ISO 22241 Standard. With NPT connections on the top and NPT or NSPH threads on bottom of the loop-style valve, the 60V-DEF-SS shear valve provides peace of mind and minimizes damage to DEF-dispensing equipment in the case of impact collision, which will also help prevent product loss.

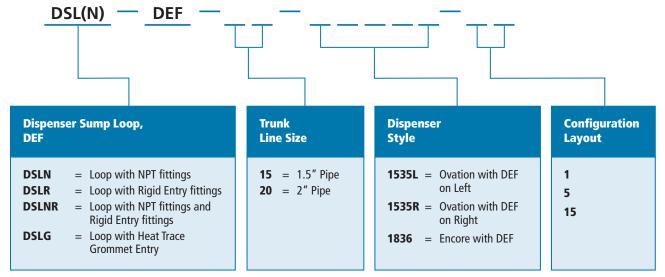

Benefits

- Compatible with Wayne Cold Weather Ovation w/DEF and Gilbarco Encore w/DEF
- Proprietary designed fully stainless-steel valve-body construction
- Utilizes a 1" NPT connection on the top and a 1.5" or 2" NPT/NPSH thread on the bottom for easy installation with a DEF-approved thread sealant, or DPC style couplings
- PEI RP1100 recommended materials used for doublepoppet internals to contain product in the event of impact collision
- Machined shear groove for reliable shear performance
- Loop body version is designed to accommodate easy use with DEF recirculation systems

DSE Dispensing Sump

OPW brings you a new dispenser sump that delivers cost-effective peace of mind for retail-fueling operators. The innovative DSE combines superior design, premium materials and world-class manufacturing expertise without breaking the bank, and its fast, reliable construction means it's ready to slot into your station right away.

Stacked with Features

DSE Dispenser Sumps fit into your existing dispensing network with ease. The sump base is designed to create strong bonds with fiberglass and flexible pipe and fittings. The DSE's universal base is sized to nest perfectly inside itself, while the feet and specialized grooves help it to unstack with ease.

Sump Model	A		A B			2	D		
Number	in.	cm	in.	cm	in.	cm	in.	cm	
DSE-1836	20.22	51.36	17.20	43.69	44.11	112.04	35.90	91.19	
DSE-1543	17.18	43.64	14.60	37.08	45.90	116.59	38.90	98.81	
DSE-1741	18.50	46.99	16.70	42.42	44.20	112.27	38.10	96.77	

Separate Component Part Numbers

Part Number	Decription
DSE-BASE	Description: DSE Universal Base. Combines with any DSE top
DSE-TOP-1836	Gilbarco Encore Top. Combine with DSE-BASE to make DSE-1836
DSE-TOP-1543	Wayne Ovation Top. Combine with DSE-BASE to make DSE-1543
DSE-TOP-1741	Wayne Helix Top. Combine with DSE-BASE to make DSE-1741

FEATURE	COMPETITOR	OPW	VALUE
Advanced Composite Manufacturing Technology	•	0	Provides dependable quality each and every time with consistent wall thickness, material blend, sump shape and detail
Quick and Efficient Manufacturing Time per Unit	Q	0	Shortest lead time of any fiberglass sump in the industry; best value for the price on the market
Designed for Easy Nesting, Stacking and Unstacking	O	0	Maximizes distributor warehouse, construction trailer and jobsite space; lowers shipping costs
Smooth Surface on Both Sides of the Sump Wall	O	0	Enhanced leak-resistant sealing surface for all types of entry fittings
One Base for All Dispenser Models	O	0	Reduces distributor inventory and improves ease of ordering; all sump models are conduitless with wide access
Closed-Molded Manufacturing Process	O		Eliminates worker and environmental exposure to resin vapors or glass fibers

Pre-Plumbed DSE Dispenser Sump

Utilizing the quality and value of the DSE Dispenser Sump, OPW now offers a Pre-Plumbed DSE for customers who wish to save time and costs of installation.

Complete with factory-assembled and tested components, the Pre-Plumbed DSE continues the OPW E-Series tradition of superior design, materials, and affordability. The OPW Loop System® without the "loop".

All elbows, tees and rigid NPT pipe nipples e-coated for superior protection and performance.

The Pre-Plumbed DSE ships installed with the following items:

- Tops (Wayne Ovation or Gilbarco Encore)
- Pipe Entry Fittings
- Stabilizer Bars
- OPW 10 Plus Double-Poppet Emergency Shear Valves
- Flex Connectors or Rigid Risers (NPT Pipe Nipples)
- Elbows/Tees (DPC or SBC compatible)

Features & Benefits:

- Quality Components Factory-Installed – pre-plumbed dispenser sump provides convenience and installation cost/time savings
- Piece-of-Mind Installation components are factory installed and tested in a controlled environment eliminating potential costly installation errors in the field
- Advanced Composite Technology

 premium construction of a robust
 fiberglass product with smooth
 surfaces on both sides of the sump
 walls and consistent thickness, blend
 and shape for strong bonds with
 entry fittings
- Customizable choose your configuration by dispenser type, entry fittings, traditional or renewable shear valves, flex connector or rigid riser, and pipe coupling type
- Efficient Manufacturing and Fast Lead Times – provides best-in-class quality and value shipped quickly
- ◆ Loop System Advantages all the features and benefits of the legendary OPW Loop System for jurisdictions that still require piping slope back to the tank

Components

Part Configurations

Base			DSE-BASE	
Tops	DSE-1836	Gilbarco Encore	DSE-1543	Wayne Ovation
Stabilizer Bars	SBK-1800	Gilbarco Encore	SBK-1500	Wayne Ovation
Pipe Entry Fittings	REF-4015 REF-4020	1.5" Rigid Entry Fittings 2.0" Rigid Entry Fittings	HEF-4015 HEF-4020	1.5" Hybrid Entry Fittings 2.0" Hybrid Entry Fittings
Emergency Shear Valves	10P-0152	10 Plus 1.5" Double Poppet	10P-0152RF*	Renewable Fuel 10 Plus 1.5" Double Poppet
Flex Connectors or Rigid Risers (1.5" x 18")	217817	1.5" NPT Pipe Nipple, 18" length (Rigid Riser)	FC15-SWM18	1.5" Flex Connector Male Swivel x Male, 18" length
Pipe-Coupling Compatibility**	Double Wall	Swivel Pipe Couplings (DPC)	Swivel Bolt-On	Couplings (SBC)

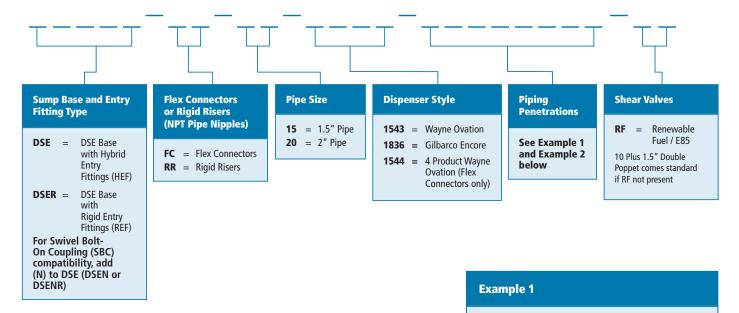

^{*}E85/B100 Applications. All shear valves in the Pre-Plumbed DSE will be RF version if selected.

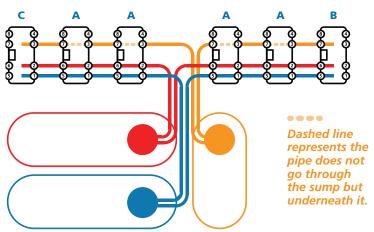

^{**} DPC & SBCs must be purchased separately. The proper e-coated tees & elbows to be pre-installed based on selection.

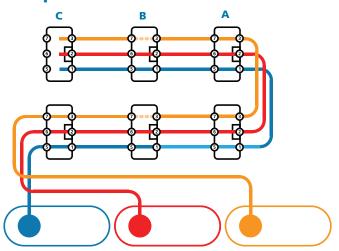

Pre-Plumbed DSE Dispenser Sump Ordering Guide

Example 1

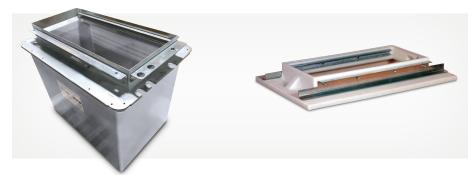

Example 2

- a. DSE-FC-15-1836-1256
- b. DSE-FC-15-1836-567
- c. DSE-FC-15-1836-123
- Hybrid Entry Fittings (DSE in part number)
- DPC compatible (No N present in part number)
- Flex Connectors (FC in part number)
- 1.5" pipe (15 in part number)
- Gilbarco Encore dispensers (1836 in part number)
- The two 3+1 dispensers have different configurations, B & C

Example 2

- a. DSENR-RR-15-1543-123567
- b. DSENR-RR-15-1543-1256
- c. DSENR-RR-15-1543-123
- Rigid Entry Fittings
- SBC compatible NPT tees/elbows (N present in part number)
- Rigid Risers (RR in part number)
- 1.5" pipe (15 in part number)
- Wayne Ovation dispensers (1543 in part number)
- The product lines cross in order to keep the dispenser "Side A" consistent

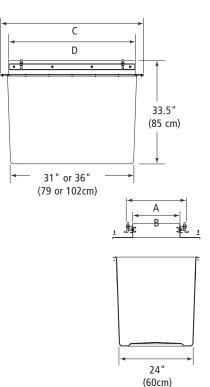

Features & Benefits:

- Conduitless Design the fiberglass base and metal cap and frame are designed to directly conduit into the dispenser along the side of the sump to avoid requiring additional entry boot penetrations
- Multi-Product Flexible the wide sump surface area is designed to accommodate up to 4 product lines into the sump
- Structural Integrity engineered with thick side walls to withstand backfill and high water table forces.
 Precise glass and resin metering throughout the molding process ensures material consistency and maximizes the strength-to-weight ratio
- Full-Perimeter Liquid Collection Channel – facilitates quick leak detection and allows flexibility in locating leak sensors

- Smooth Sealing Surfaces For Leak-Tight Sump Entry Fittings our fully enclosed molding manufacturing method produces a uniform wall thickness while eliminating air entrapment. The result is a flat, smooth finish, both inside and out, which provides leak-tight pipe entries
- Convenient Shipping and Storage

 sump boxes are nestable. Two
 sizes accept multiple frames to
 accommodate all common dispensers
- Full-Access Working Area frame is attached after plumbing is complete
- Mounting Flange sump rests on island form crossbars for support during installation

Wide-Access Fiberglass Dispenser Sumps

Ordering Specifications - Wide Access Fiberglass Dispenser Sumps

SL-1100 Urethane Sealant - One Tube required per Sump (Packaged 12 tubes/case)

^{*} Flush Mount model supplied without rain lip due to dispenser frame clearance limitations; Frame Gasket Included. Anchor bolts provided, Stabilizer Bar Kits ordered separately; One kit required for each emergency and vapor valve. Refer to FlexWorks Dispenser Sump Selection Chart (See Pages 38 - 39 of this catalog) to select sumps for particular dispensers. Yellow indicates metal top model.

^{**} These sumps are designed for Conduitless applications.

^{***} C Conduitless

Features & Benefits:

- Contractor-Friendly Installation –
 open top provides unrestricted access
 to the inside of the containment
 chamber to facilitate entry fitting
 and piping installation. Dispenser
 mounting frame is attached after
 plumbing is complete
- Deeper Burial Capability 37" burial depth allows piping slope requirements to be met more easily in layouts with long piping runs
- Simple Field-Height Adjustment –
 the top portion of the chamber can be

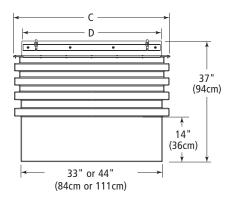

quickly and easily trimmed along the ribs to ensure maximum installation flexibility

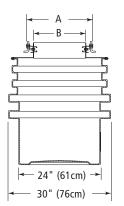

- Full Perimeter Liquid-Collection Channel – facilitates quick leak detection and allows flexibility in locating leak sensors
- Convenient Shipping and Storage

 sump boxes are partially nestable.

 Two chamber sizes accept multiple frames to accommodate all common dispensers
- Polyethylene Top polyethylene top will not corrode

One-Piece Polyethylene Dispenser Sumps

FlexWorks Dispenser Sumps are installed beneath fuel dispensers to provide access to and secondary containment of dispenser plumbing, emergency shear valves and underground piping connections. Stabilizer Bar Kits are installed in FlexWorks Dispenser Sumps to provide reliable support for boss-mounted emergency shear valves.

Features & Benefits:

- Multiple Models ensure a custom fit.
- Structural Reinforcing on Large MPD Models – prevents sump deformation from backfill and high water table forces.
- Light Color preserves rigidity in sunlight before backfill and provides maximum visibility after installation.
- Full Perimeter Liquid-Collection Channel – facilitates quick leak detection and allows flexibility in locating leak sensors.
- Integral Rain Lip protrudes into the dispenser frame to prevent surface water entry.
- Easy Installation field-height adjustment capability and large pipe entry area ensures installation flexibility.
- Many Are Available in a
 Conduitless Model eliminates
 conduit entry fittings and prevents
 a notorious leak point inside
 dispenser sumps.

^{*} Refer to FlexWorks Dispenser Sump Selection Chart to select sumps for particular dispensers (See pages 38 - 39 of this catalog)

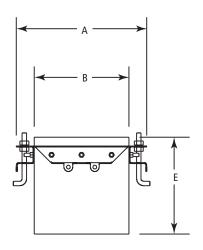

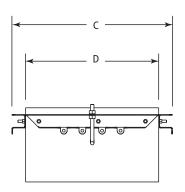

^{**} Flush mount model supplied without rain lip due to dispenser frame clearance limitations; Frame gasket included. Anchor bolts provided, Stabilizer Bar Kits ordered separately; One kit required for each emergency and vapor shear valve.

FlexWorks Polyethylene Dispenser Pans

FlexWorks Dispenser Pans are installed beneath fuel dispensers to provide secondary containment of dispenser plumbing and emergency shear valves. Dispenser pans are commonly used with rigid fuel pipe and to retrofit existing dispensers.

DEF Containment Sumps

Offering both the DEF Loop Sump - a fast, DEF-specific bolt-on sump with the same great value of Loop - and the same bolt-on containment sumps to be installed for a traditional UDC.

- DEF containment adapted to the same profile as our one-piece polyethylene Dispenser Sumps for Encore and Ovation II.
- Depending on dispenser configuration, sumps can be bolted on either side to fit within the dispenser manufacturer's footprint.
- For an Encore dispenser, the DS-DEF-1836 is a traditional style DEF UDC, which can be added to either a DSE-1836, or DS-1836. This sump requires an SBK-1800 stabilizer bar.
- For an Ovation II dispenser, the DS-DEF-1535 is a traditional style DEF UDC, which can be added to the DS-1535. This sump requires an SBK-1100C.

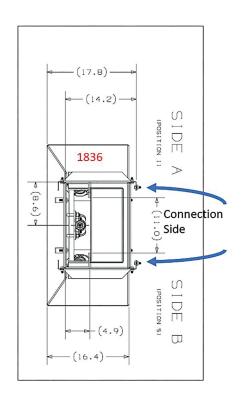

Standard Configuration

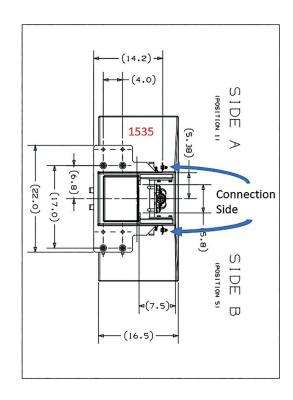

Containment Sump		DEF Sump

Automatic Fire-Extinguisher System

The FlexWorks Automatic Fire-Extinguisher System is a small, non-rechargeable fire extinguisher designed specifically to be installed in a containment sump underneath an aboveground fuel dispenser, and to automatically extinguish a fuel fire in the event of a dispenser knock-over. The FlexWorks Fire-Extinguisher System will automatically activate and discharge its extinguishing agent when the surrounding temperature reaches 175°F (79°C). The fire extinguisher comes with its own mounting bracket and can be mounted to a variety of surfaces. The fire extinguisher contains enough extinguishing agent to protect dispenser containment sumps up to a maximum capacity of 50 cubic feet.

Features

- Charged with a clean agent - FK-5-1-12
- Operating temperatures of 32° to 130° F (0° to 54° C)
- One-year replacement warranty
- Low-cost solution to a potentially expensive problem

Benefits

- Extinguishes fuel fires quickly
- Provides year-round fire protection
- No certified annual testing required
- May reduce fire insurance premiums

Fire Prevention

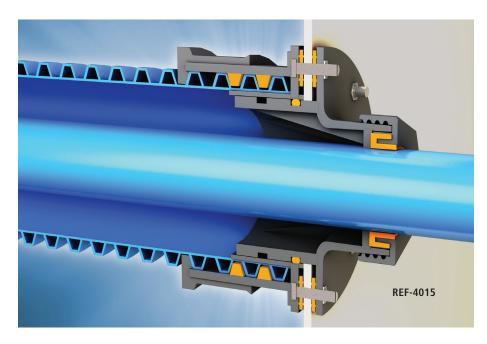

Dispenser and UST containment sumps offer significant environmental protection by providing secondary containment and corrosion protection of valves and pipe fittings. Under certain conditions, a potential fire hazard could develop. Should a fire occur inside the containment chamber, the FlexWorks Automatic Fire-Extinguisher System automatically extinguishes the fire in a matter of seconds, protecting patrons, underground piping, shear valves and sump.

Application	Dispenser Containment Sump
Agent	FK-5-1-12
Coverage Area:	50 ft. ³ (1.42m ³)
Atmospheric Life	Less than one day
Activation Temp:	175°F (79°C)
Operating Temp Range:	32° to 130° F (0° to 54° C)

The "REF" Rigid Entry Fitting

As a result of OPW's all-inclusive development program to bring Next Generation Solutions to the market, OPW is proud to announce the release of our new state-of-the-art Rigid Entry Fitting.

How is this fitting different than other fittings in the industry? Our new Rigid Entry Fitting has minimal exposed rubber, yet still accommodates ground movement. The sealing redundancy throughout the fitting provides maximum containment and unmatched protection from water intrusion.

Features & Benefits:

- Sealing redundancy throughout Maximum containment and unmatched protection from water intrusion
- Preserves total accessibility For monitoring, maintenance, testing and repair
- Maintains flexibility to accommodate pipe and ground movement
- Hard-shell exterior to weather the elements and abuse of the underground environment

Hybrid Entry Fittings

FlexWorks Hybrid Entry Fittings are designed to seal the sump penetration. These entry fittings bring the best of both worlds from the robust and popular REF and legacy DEB lines of products. The outer buried half features a hard-shell exterior to weather the elements and abuse of the underground environment, the same as you find on an REF. The inner accessible half provides the flexibility of the DEB. The sealing redundancy throughout the fitting provides maximum containment and unmatched protection from water intrusion.

- Watertight pipe and conduit entries
- Maximum flexibility to accommodate pipe and ground movement
- Added flexibility providing quick and easy installation
- Provides clean, dry environment inside tank and dispenser sumps and accommodates various site installations
- Allows for easy field adjustments
- Can be repaired if damaged
- Internal and external clamps provide dual positive seal-off points
- Third-party tested and approved by UL/ULc
- Available heat-trace entry fittings with grommet

Flexible Entry Boots

FlexWorks Flexible Entry Boots are reliable, safe seals for pipe and conduit entries into underground containment sumps. These entry boots allow for angled pipe entries and have no exposed metal parts to the underground environment. These entry boots are available in a variety of sizes and designs to accommodate rigid and flexible piping, ducting and access pipe.

Features & Benefits:

- Watertight pipe and conduit entries
- Installation on flat or round surface
- Added flexibility permitting angled entries up to 15 degrees

Sump Entry

Flexible entry boots have been tested to withstand a minimum of 6' of liquid head pressure. These seals provide a studded flange connection to create a positive and secure seal where the rubber contacts the sump wall and also around the pipe or conduit. Tightening down on a series of stud fasteners with a compression ring provides a high-compression mechanical seal compared to screw-on-type bulkhead seals.

Primary pipe and access pipe entering the containment sumps may not be perpendicular with the sump wall. Angled entries are generally a result of directional plumbing restrictions on the inside of the containment chamber due to space limitations. Flexible entry boots are flexible enough to permit angled pipe or conduit entries (on two axes) into the sidewall of a containment chamber. All flexible entry boots permit angled entries up to a 15-degree angle off the perpendicular center line in any direction without leaking or putting undue stress on the pipe or conduit seal.

Flexible Entry Boot Manual Order Number: EBM-0001

Test Boots

FlexWorks Test Boots are used to isolate and air-test the interstitial space between the primary and secondary pipe. One test boot is required for each pipe end.

The QCJ-2512 and QCT-2512 models allow users to quickly close the interstitial space of the pipe for testing. New EPA regulations maintain that secondarily contained areas must be tested for tightness after repairs and this new hardware saves time and money on labor when tests are necessary.

- QCJ-2512 (Junction) is used for pass-through UDCs, and the QCT-2512 (Termination) is used to terminate the run.
- Quick-close system allows for open systems to be closed and tested in minutes.

Flexible Piping Systems for Fuel Oil & Generator Applications

The FlexWorks Fuel Oil Piping System is designed to provide a reliable fuel-supply system to generators and boilers from remote fuel tanks. Typical applications include both a 3/4" supply and a 1" overflow return line running from a remote AST or UST to a generator engine or boiler day tank. Both lines are typically inserted into a common FlexWorks Access Pipe to provide retractable access to the fuel lines. OPW will cut fuel oil pipe to length at no charge.

VSE Vent Transition Sump

The new OPW Vent Transition Sump (VSE) is an at-grade system that utilizes the fiberglass DSE Dispenser Sump base with a powder-coated steel top. This laser-cut top features a lockable access hatch and is sloped for water-shedding. Tops arrive configured with up to four (4) pre-cut entry holes for either 2" or 3" vent stacks.

Rigid Entry Fittings (REF) are included for the vent stack entries, along with UV/ weather-resistant caps for protection. A vent stack rack system is available in units of 4 feet up to 12 feet total.

The smooth walls inside and out of the DSE base allow for a more secure bond of the pipe entry fittings. See the chart below for available OPW Vent Transition System components for more efficient installs and superior quality.

The VSE Includes:

- Fiberglass DSE Base
- 14-Gauge Powder-Coated Steel Top
- Desired Configuration of Vent Stack Entries with REF Fittings and UV/ Weather-Protection Caps

VSE Vent Transition Sump (with rack system)

OPW Vent Transition System

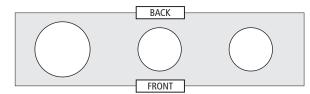

Features & Benefits:

- Powder-Coated Steel Tops –
 long-lasting, lockable, less heat
 absorption, and water-shedding
 performance. Rigid entry fittings
 included with UV / weather-resistant
 protective caps
- Fiberglass DSE Base advanced composite technology provides smooth surfaces on both sides of the sump walls to create consistent thickness and shape for strong bonds with entry fittings
- Any Pipe, Any Fittings sump base is compatible with all vent pipe and entry fittings.

- Customizable Steel tops are preconfigured to arrive laser-cut with up to four (4) vent stack entries at either 2" or 3"
- Peace-of-Mind Installations –
 Tested, quality products that are designed to install faster and perform over time
- Vent Transition System Combine with OPW's vent pipe, PV vents, and other components for superior performance, cost savings, and enhanced efficiency of installs
- Tops can be ordered separately if stocking DSE bases

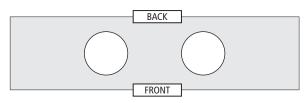

Part Number Configuration Guide

VSE - ____ Dashes represent the sizes of vent stack entries, determined from left to right. (Up to 4 entries. Entry sizes 2" or 3") To order Tops separately, follow above method using part number **VSE-TOP-**

Example A:

VSE-322 = (3) entries total. (1) 3" diameter and (2) 2" diameter

Example B:

VSE-22 = (2) entries total, both 2" diameter

GSE Grade-Level Transition Sump

The new OPW GSE Grade-Level
Transition Sump is an at-grade system
that utilizes the fiberglass DSE base
with a powder-coated steel top. The top
features a lockable access hatch and is
sloped for water-shedding.

The smooth walls inside and out of the DSE base allow for a more secure bond with pipe entry fittings.

The GSE is an ideal transition sump for aboveground storage tank (AST), aviation, marina, fuel oil and generator applications. It can also serve as a multi-purpose junction box for various fuel, chemical, water and electrical installations.

The GSE Includes:

- Fiberglass DSE Base
- 14-Gauge Powder-Coated Steel Top

Part Numbers	
GSE-3344	GSE Steel Top with DSE Base
GSE-TOP	GSE Steel Top
DSE-BASE	DSE Base

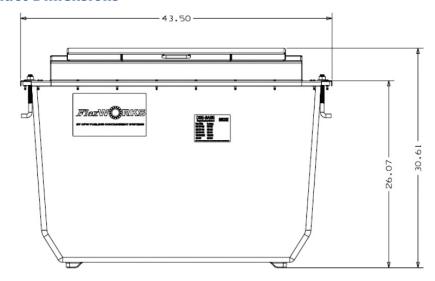

Features & Benefits:

- ◆ Fiberglass DSE Base advanced composite technology provides smooth surfaces on both sides of the sump walls to create consistent thickness and shape for strong bonds with entry fittings. This is a multi-purpose base and is the same one used for dispenser and vent transition applications. It is completely stackable, nestable and easily separated to maximize warehouse and job-trailer space. One base many functions!
- Versatile Transition Sump multiple applications as a transition or junction box, including AST, aviation, marina, fuel oil, generator, chemical, water and electrical

- Powder-Coated Steel Tops longlasting, lockable, less heat absorption and water-shedding performance
- Any Pipe, Any Fittings sump base is compatible with all pipe and entry fittings
- Peace-of-Mind Installations –
 Tested, quality products that are designed to install faster and perform over time
- GSE Tops can be ordered separately
 for those who stock DSE bases

Transition Sumps

Model PTS-4021 Transition Sump (2 Piece - Polyethylene Sump/ Polyethylene Top)

- Non-corroding, polyethylene sump container
- Weatherproof lockable cover
- Exterior anchoring system

AST Application: Provides secondary containment and accessibility to the fittings that connect the underground supply piping to the rigid supply piping that leads from an aboveground storage tank.

Vent Stack Application: Transition sump is used for containment and accessibility to the fittings. At the vent stack, where the underground vent piping connects to the rigid vent stack piping.

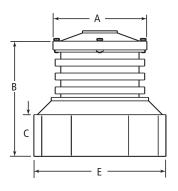

Special Application Sumps & Extensions

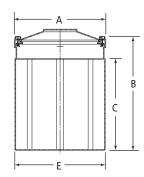

FlexWorks Special Application Sumps are installed below-grade and provide a convenient means of housing a multitude of underground piping connections and equipment, including valves, filters, meters and pumps. The PSL-3830 Line Connection Sump has large horizontal flats to accommodate multiple piping entries. The PSL-3630 Tall Mini-Sump has long vertical flats to accommodate applications with varying pipe entry heights. The PSL-2430 Mini-Sump is ideal for connecting long pipe runs in a contained area.

10 Plus Series Emergency Shut-Off Valves

OPW raised the protection standard in emergency valves when it introduced the first double-poppet valve back in 1989. This industry-changing OPW innovation helped to significantly reduce the risk of fire, explosion, personal injury, property damage and environmental contamination at sites around the world. Major oil companies and jobbers agreed that providing added protection for their customers, investments and the environment were the three most convincing reasons for switching to the innovative new valves.

10 Plus Series Instruction Sheet Order Number: **201614**

Materials

Top: Cast iron **Body:** Cast iron

Features

- ◆ The ONLY emergency shut-off valve in the world designed to protect your customers, investments, and the environment against the potential hazards of undetected shear-groove leaks caused by low-impact incidents
- The patented SmartGuard™ design contains shear-groove leaks, preventing fuel from leaking into sumps to help reduce the risk of fire, explosion, personal injury, property damage, environmental contamination, product loss and costly clean-up
- Superior shear-groove design and engineering results in reliable valve shut-off in the event of a pull-over or dislodged dispenser. The 10 Plus utilizes the same time-tested field-proven design of the OPW 10 Series Emergency Shut-off Valve – the most specified emergency shut-off valve in the world
- Fusible link releases to automatically close the valve to reduce fire hazard
- Rigorously tested to meet OPW's rigid quality standards
- Renewable Fuel (RF) Shear Valve Option E85 Compatible

Materials

Top: Cast iron
Body: Cast iron
Disc: M-19

Carrier: Zinc-plated steel

Stem: Copper-nickel-chrome-plated brass

Poppet Spring: Stainless-steel

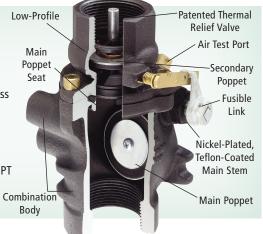

Seal: M-19 O-Ring

Packing nut: Brass, Teflon®-coated

Inlet and outlet thread: 1-1/2" (4 cm) NPT

(British threads available)

*With black Duragard® E-Coating

Features

- High Flow Capacity the primary poppet is held out of the flow stream while the secondary poppet is held normally open to minimize head loss across the valve and to protect the poppet seals from damage and erosion. True 1-1/2" (4 cm) and 2" (5 cm) body sizes ensure maximum flow.
- Fire Protection a fusible link trips the valve closed at 165° F (74°C) to shut off fuel supply to the dispenser.
- Main Poppet Seat Integral to the Top Assembly – having the main poppet seat as an integral part of the valve top ensures a new, clean seating surface is installed each time the top is replaced. This design also ensures that the integrity of the seal between the valve top and bottom is verified during line testing and allows full inspection of the main poppet when the top is removed.
- Duragard®-Coat Finish provides superior corrosion resistance.
- Reliable Shut-off a stainless-steel main spring, a Teflon®-coated brass packing nut and a copper/nickel/chrome-plated brass stem are designed to prevent tar build-up and corrosion from interfering with poppet operation after long periods of normal service without activation.

- Integral Test Port a 3/8" (9.5 mm) test port allows the piping system to be air-tested without breaking any piping connections.
- Patented Thermal Relief Valve relieves excessive pressure over 25 psi caused by thermal expansion of fuel in the dispenser piping system in the event of fire (doublepoppet models only).
- Low-Profile Tops female and union-top double-poppet valves have a low-profile top to allow upgrading from OPW singlepoppet valves without changing existing piping.
- ◆ Multiple Mounting Options valves are boss-mounted to stabilizer bars in sumps and pans or mounted to bars embedded in the island with optional U-Bolt kits 10UBK-015 (not included). Versatile Combination Body (boss mount/ U-Bolt mount) models are available to accommodate most mounting applications with one valve style.
- Underwriters Laboratories –
 listed for use with gasoline and 85% and 100% methanol. All OPW 10 Emergency Shut-Off Valves meet requirements of UL STANDARD 842.

10 Series Emergency Shut-Off Valves

OPW 10 Series Emergency Shut-off Valves are installed on fuel-supply lines beneath dispensers at grade-level to minimize hazards associated with collision or fire at the dispenser. If the dispenser is pulled over or dislodged by collision, the top of the valve breaks off at the integral shear groove, activating poppets and shutting off the flow of fuel. Single-poppet models shut off supply flow, while double-poppet models shut off supply as well as prevent release of fuel from the dispenser's internal piping. The base of the emergency valve is securely anchored to the concrete dispenser island through a stabilizer bar system within the dispenser sump or pan to ensure proper shearing action. The valve base is secured to the stabilizer bar using a three-point boss mount system or a U-Bolt Kit (not included) 10UBK-015 (1-1/2") and 10URK-0200 (sold separately). Valve inlet (bottom) connections are female pipe threads and outlet (top) connections are available with female threads, male threads or a union fitting. Other options include suction system models with a normally closed secondary poppet which maintains prime, and models with external threads on the inlet body which connect to secondarycontainment systems.

PA15 Offset Adaptor

The OPW PA15 Offset Adaptor is designed for adjusting misaligned pipes in dispenser sumps and suction stubs. The PA15 has a low-profile feature, and is designed for maximum flow.

NOTE: All BSPP Thread Shear Valves must be ordered through OPW's Europe or Asia office.

IMPORTANT NOTICE:

When mounting the OPW 10 Series Emergency Shut-off Valves, the anchoring system employed must withstand a force greater than 650 ft. pounds per valve.

NFPA Code 30A, Automotive and Marine Service Station Code, requires that the automatic closing feature of emergency shut-off valves be checked at least once per year by manually tripping the hold-open linkage. OPW recommends the use of the FlexWorks Stabilizer Bar Support System for proper mounting of 10 Series Valves.

NOTICE:

As per NFPA 30A, electrical supply to the submersible pump must always be disconnected before servicing meters, dispensers or emergency shut-off valves.

60V Instruction Sheet Order Number: **H12133M**

OPW 60VS Series Vapor-Line Shear Valves

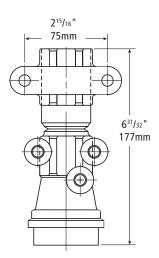

OPW 60 Series Vapor-Line Shear Valves are installed on vapor-return lines beneath dispensers at grade-level to minimize hazards associated with collision or fire at the dispenser. If the dispenser is pulled over or dislodged by collision, the top of the valve breaks free at the integral shear groove to minimize damage to the dispenser piping. Poppeted models afford additional protection by preventing the release of vapors from the dispenser's internal piping and the vapor line to the tank. The base of the Vapor-Line Shear Valve is securely anchored to the concrete dispenser island through a stabilizer bar system within the dispenser sump or pan while the valve top is secured to the dispenser structure to ensure proper shearing action. OPW Vapor-Line Shear Valves are designed to meet the requirements of NFPA-30A Section 4-3.7. Poppeted models are UL-listed and CARB-approved.

Materials

Features

- 1-1/2" female connection to underground piping.
- ◆ 1" female connection to dispenser piping.
- Air-test port to enable vapor-line testing without breaking pipe connections.
- Choice of top or side inlet connection.
- Three-Point Boss Mount stabilizer bar lower mounting connection; U-Bolt upper mounting connection.

Features & Benefits:

- Proprietary design of fully stainlesssteel valve-body construction
- Utilizes a 1" NPT Connection on the top and a 1.5" on the bottom for easy installation with a DEF-approved thread sealant
- PEI RP1100-recommended materials used for double-poppet internals to contain product in the event of impact collision
- Machined shear groove for reliable shear performance
- Standard OPW mounting design, to be installed with any of our Stabilizer Bar Kits (SBK)
- Loop body version is designed to include easy use with DEF-recirculation systems.

60V-DEF-SS Stainless-Steel Diesel Exhaust Fluid (DEF) Shear Valve

Starting with 2010 models, DEF is required in diesel-powered trucks utilizing Selective Catalytic Reduction (SCR) to meet federal emissions standards. The dispensing infrastructure at travel centers and fleet-refueling sites continues to evolve as DEF-compatible equipment is installed.

OPW's new 60V-DEF-SS Shear Valve body is made of 100% stainless construction, for unmatched compatibility. This double-poppet shear valve is third-party tested to ensure compatibility with the ISO 22241 Standard. With NPT connections on the top and bottom of the valve, our 60V-DEF-SS valve provides peace of mind and minimizes damage to your DEF-dispensing equipment in the case of impact collision, while preventing product loss.

OPW Island Forms & Protective Curbing

OPW is the world leader in commercial and industrial protective curbing products. The company designs, engineers and manufactures island forms, curb fascia and pipe to meet virtually any protective curbing application.

OPW Island Forms Feature:

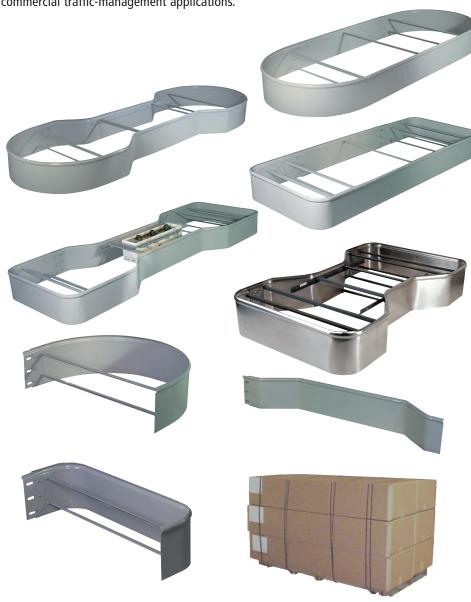

- Variety of End Sections, Lengths,
 Widths and Styles allows for a customized fit to site constraints and requirements.
- Spacious Mid-Section provides ample room to install standard and wide-access dispenser sumps from the top of the island.
- Unique Sump Mounting System

 ensures the dispenser sump is
 anchored to the Island Form and
 adjustable to accommodate various
 width sumps.
- Convenient Shipping and Storage

 revolutionary threaded-stud bracing system allows forms to stack together and enables boxing of the island assembly.
- Easy Installation cross braces bolt onto threaded studs. Field welding is not required.
- Attractive Appearance link plates impart a crisp, clean exterior joint between sections for a smooth, finished presentation.
- Material Standard models are 12-gauge steel powder-coated gray and stainless-steel models are 304 stainless.

OPW Island Forms

Designed to protect gasoline dispensers, electric vehicle (EV) chargers, electronic equipment, kiosks, bank teller and ATM equipment, as well as to restrict or route material-handling equipment in warehouses. OPW Island Forms and Protective Curbing streamline traffic flows in toll booths, quick-serve restaurants and various other commercial traffic-management applications.

Pre-Assembled Island Forms

Can pre-assemble islands max 4' wide, 5' long.

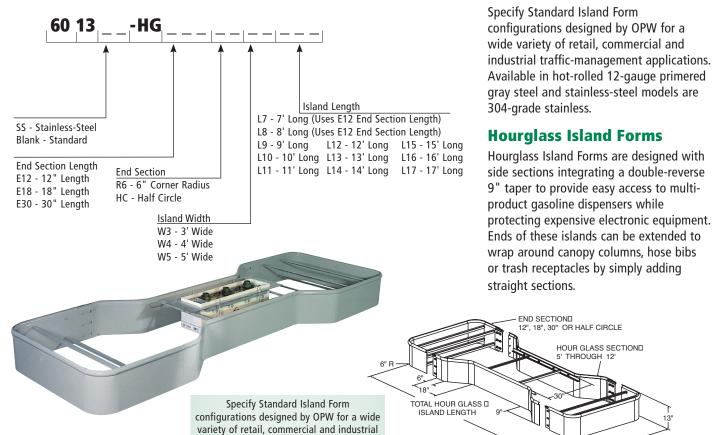

2005 UL Standard for safety for non-metallic underground piping for flammable liquids, UL971.

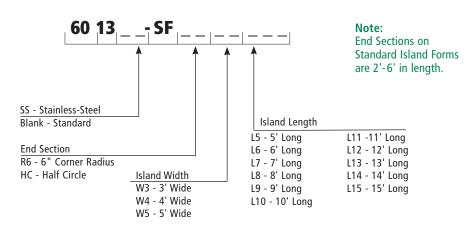

Hourglass Island Form Specification/Ordering Guide

traffic-management applications.

Standard (Straight) Island Form Specification/Ordering Guide

Standard (Straight) Island Forms

OPW Standard Island Forms

Straight Island Forms are designed with straight side sections to provide a convenient means of installing multiple dispensers on a single island. Straight Island Forms are also used to protect teller and ATM equipment at banks, restrict or route material-handling equipment in warehouses, streamline traffic flows in toll booths and quick-serve restaurants and various other commercial traffic-routing applications. Standard models are steel and stainless-steel models are 304 stainless.

Build Your Own Island Form Or Curbing From Individual Sections

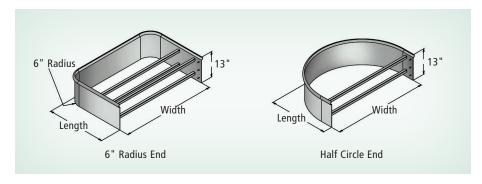

Build your own Island Forms and Protective Curbing to fit your particular application from standard sections. Standard models are steel and stainless-steel models are 304 stainless.

Standard Island Form End Sections

End Sections are available to build customized Island Forms from standard OPW Island Form components.
Sections are available in Half Circle or 6" Radius configurations. Each End Section is pre-braced and includes all required hardware for assembly.

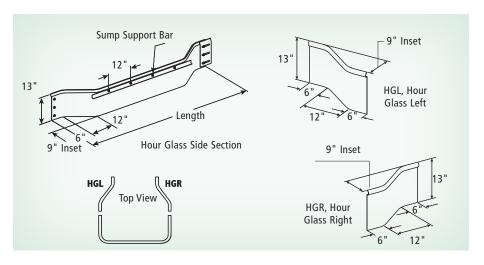

Hourglass Sections are designed with double-reverse 9" tapers to provide easy access to multi-product gasoline dispensers. One-piece Hourglass Sections are available from 5' through 9'. Sump Support Bars are included with individual Hourglass Sections. HGL and HGR sections can be used in conjunction with Straight Sections when designing longer Hourglass Islands, or for use in Protective Curbing applications.

Sump Support Bars

Sump Support Bars are designed to allow OPW Island Forms to accept various-width sumps. The bars are positioned to locate the top of OPW Dispenser Sump Frames 1/2" above finished island grade to direct water drainage away from the sump. Sump Support Bars must be specified when designing Island Forms from individual Straight Sections.

Ordering Specifications

Model #	Length (in.)	Weight		
6000P-SMP	54	3 lbs.		

Build Your Own Island Form Or Curbing

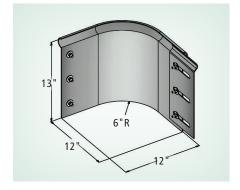

Build your own Island Forms and Protective Curbing to fit your particular application from standard sections. Standard models are steel and stainless-steel models are 304 stainless.

Corner Sections

Corner Sections are designed for use in various Island Form widths, or for use in Protective Curbing applications.

Ordering Specifications

Model #	Length (in.)	Weight		
6013P-R6C	12	10 lbs.		

Curb Fascia Brackets

Curb Fascia Brackets replace cross braces and are designed to brace sections when utilized as protective curb fascia. The brackets are hole-punched for bolting to threaded studs, and allow for 1/2" diameter #4 reinforcement bars to secure the sections in place.

Materials:

Hose: 322 Stainless-Steel

Wire Braid: 304 Stainless-Steel

Pipe Nipples: SCH. #80 Stainless-Steel

Swivel: Viton®/Buna Seals

Features:

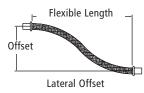

Maximum working pressure: 150 PSIG (10 bar)

 Service temperature range: -320°F to 1,500°F (-196°C to 816°C)

Minimum burst pressure 750 PSIG (52 bar)

 Inherent hoop strength of convoluted hose allows full vacuum service

ULC/ORD-C536-1998 (underground and aboveground installations)

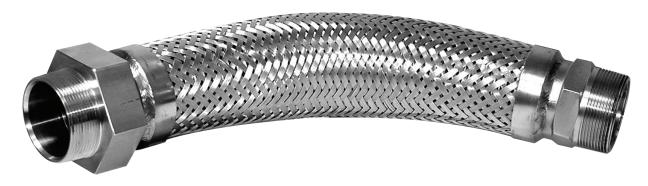

OPW Stainless-Steel Flexible Connectors

Stainless-Steel Flexible Connectors provide flexibility in the installation and operation of fuel-piping systems. Flexible Connectors can be used as a convenient means of connecting piping to pumps and dispensers and throughout the piping systems where connections and changes of direction are necessary. Flexible Connectors dampen the effect of ground and/or piping movement. All stainless-steel construction ensures long service life and corrosion protection. Flexible Connectors are rated for 150 psig (10 bar) working pressure, as well as for full vacuum service. Compatible with diesel, gasoline, methanol, ethanol and MTBE. Available as Male by Male and Male Swivel by Male, Male 90° and Easy Clamp Connectors.

Suction-System Accessories OPW 70 Vertical Check Valves (with Shear Groove)

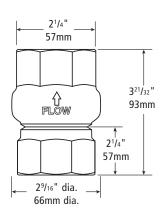

Materials

Body: Cast iron with black Duragard®

E-coating **Disc:** M-19 Viton

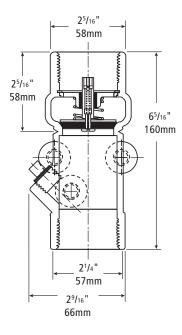

- Low Pressure Drop
- M-19 Viton® Seals on main poppet for compatibility with methanol-blended fuels and reliable sealing
- Protective Shear Groove –
 designed to reduce the possibility of
 damage to buried piping in the event
 the dispenser is knocked over
- Thermal Relief Valve to reduce pressure build-up in suction pumps.
 Opens between 25 & 35 PSI (1.7 & 2.4 bar)
- Compatible with 85% Ethanol (E85) or Methanol (M85)

Additional Features (70S Model)

- Stabilizer Mounting Bosses three bosses in the lower portion of the valve body allow for rigid mounting to stabilizer bars. Use FlexWorks mounting plate with appropriate stabilizer bar kit
- Built-In Air-Test Port allows air testing of the entire pumping system without breaking the line. Also allows line to be drained from the valve to the tank (assuming there are no other check or foot valves below the 70S)

OPW Vertical Check Valves

OPW Vertical Check Valves are installed on suction-system fuel lines directly below the inlet to the pump in the dispenser island to maintain prime. The 70 Series Valves feature a built-in shear groove, which helps minimize piping damage if the dispenser is pulled over or dislodged by collision. The single-poppet provides redundant protection from losing prime and are also available without shear grooves. **OPW Vertical Check Valves are** recommended for use on suction-lines where the pressure does not exceed 34 feet of head (approximately 15 psi [1 bar]). 70 Series valves need 1/2" of mercury to activate the poppet.

Ordering Specifications

Model #	in.	mm	lbs.	kg
70-0070	1 ¹ / ₂ " NPT	38 mm	1.80	.8
70S-0075	1 ¹ / ₂ " NPT	38 mm	2.9	1.3

70 and 70S Vertical Check Valve Instruction Sheet Order Number: **H11055PA**

Warning: The valve body must be rigidly anchored to a structural member within the island to ensure breakage at the shear groove in the event of severe impact. The shear groove must be at the same level or a maximum of 1/2" above or below the top of the pedestal island. Failure to provide rigid mounting or install the shear groove at the proper level may result in a failure of the valve to close or shear, resulting in an excessive loss of product and a hazardous condition.

OPW Underground and Aboveground Storage Tank Fuel-Transfer and Containment Systems

OPW offers a wide selection of underground storage tank equipment. This equipment is designed to help protect the environment by providing fuel operations with spill-containment manholes, manholes and monitoring equipment, fill-pipe connection equipment, overfill-prevention equipment and tank-venting equipment.

OPW offers a wide variety of different spill-containment products, including innovative double-wall spill-containment and Phase 1 Enhanced Vapor Recovery (EVR) products, designed to prevent spilled product from entering the soil near the fill and vapor-return riser connections on USTs during normal tank-filling operation, or in the event of tank overfill. OPW spill-containers are designed to catch spillage to help prevent soil contamination and groundwater pollution.

OPW manholes provide access from gradelevel to underground equipment including tank sumps, tank riser pipes, monitoring equipment, submersible pumps, valves and piping connections. OPW also offers a wide selection of tight-fill adaptors and caps, Stage I adaptors and caps and monitoring probe and well caps.

OPW overfill-prevention valves are designed to help prevent the overfill of USTs during product drops. OPW offers a wide selection, including 61SO and vaportight and testable 71SO positive shut-off valves, and ball-float vent valves.

OPW Phase 1 Enhanced Vapor Recovery (EVR)/ Torque Specifications

In March 2000, The California Air Resources Board adopted new, more stringent vapor recovery requirements for gasoline-dispensing facilities. The new program, titled "Enhanced Vapor Recovery" (EVR), was developed to promote enhanced vapor recovery system reliability and to seek further reductions to meet both California and Federal Air Quality Requirements. Phase I EVR is now enforced in California.

For the purpose of reducing fugitive vapor emissions at gasoline-dispensing facilities, the California Air Resources Board has formally adopted new compliance requirements and certification procedures for vapor recovery equipment. These new requirements, know as Enhanced Vapor Recovery (EVR), define the most stringent and comprehensive performance and reliability requirements for Phase I Vapor Recovery Systems. Some important new requirements for a certified EVR Phase I system include:

- EVR System Certification Test
 Protocol all components must now
 be installed and tested as a complete
 integral Phase I system
- EVR System Efficiency must now exceed 98% versus 95% previously allowed
- EVR System Performance allowable leak rates for components such as spill-container drain valves, overfill valves, and pressure vacuum vents have been cut by 50%
- EVR System Reliability operating test period for a complete system increased from 90 days to 180 days

Torque Specification

EVR Phase I Components Installation Torque Specifications (Oct 26, 2004)

Component	Foot Pounds (Inch Pounds)
All 4" NPT pipe. See note 1	125 to 250 ft.lb.

61VSA Swivel Vapor Adaptor	90 to 110 ft.lb.
61SALP Low-Profile Swivel Fill Adaptor	90 to 110 ft.lb.
623V Pressure Vacuum Vent base	30 to 35 ft.lb.
233V Extractor Fitting. See note 1	125 to 250 ft.lb.
3" NPT	125 to 300 ft.lb.
2" NPT	100 to 150 ft.lb.
53VML Ball-Float Vent Valve and extractor cage - 3 3/4" threads	75 to 150 ft.lb.

Note 1: All 4" NPT threads are to be torqued progressively lower from the tank up.

On September 17, 2003, OPW received a second EVR certification for the Phase I Enhanced Vapor Recovery System. The new approval provides the option of using the ball-float with a straight drop tube or the positive shut-off overfill-prevention valve. OPW can offer the flexibility for installing an appropriately certified EVR system to meet the regulations in any jurisdiction for virtually any Phase I UST application. To review the EVR requirements visit: www.arb.ca.gov/vapor/vapor.htm

OPW Multiports and Spill-Containment Manholes

OPW Spill-Containment Manholes are designed to prevent spilled product from entering the soil near the fill and vapor-return riser connections on underground storage tanks during normal tank-filling operation, or in the event of tank overfill. The spill-containers catch spillage to help prevent soil contamination and groundwater pollution.

Single-Wall Spill-Containment Manholes

The new OPW 1-2200 Series Single-Wall Spill-Containers are advanced, rugged, easier to install and service, upgrades to a double-wall and are more reliable than current single-wall spill-containers available today. Never break concrete again with our new EPA Compliant UST Solution for today, tomorrow and the future.

Double-Wall Spill-Containment Manholes

The new OPW EDGE™ 3100 Series Double-Wall Spill-Container is leading-edge spill-containment technology. Designed to help prevent spilled product from entering the backfill in the event the primary spill-container is damaged, the new OPW EDGE™ is dimensionally identical to single-wall spill buckets (from riser to grade), making single-to-double-wall upgrades quick, easy and affordable. No need to break concrete or replace riser pipes. Florida and North Carolina compliant.

Thread-On Spill-Containment Manholes

OPW Thread-On Spill-Containment Manholes are generally used on new tank or riser pipe installations. The spill bucket is threaded directly onto 4" NPT fill and vapor-return riser pipes. An integral drain valve allows contained product to be drained into the tank. OPW Thread-On Spill-Containers are available in 5-, 10- and 15-gallon capacities. Thread-On Double-Wall spill-containers are also available in 5-gallon capacities.

Sealable Cover Spill-Containment Manholes

OPW Sealable Cover Spill-Containment Manholes are designed to eliminate problems associated with water entering grade-level spill-containers, and are ideal for areas with poor drainage, areas subject to tropical rain and standing water, and cold regions where melting snow and road salt can enter standard spill-containers. An expandable cover seal is latched down, sealing against the I.D. of the mounting ring and preventing ingress of surface water. Sealable spill-containers are available in thread-on and slip-on configurations in 5 and 15-gallon capacities.

Slip-On Spill-Containment Manholes

OPW Slip-On Spill-Containment Manholes are used on new or existing UST riser pipes. The spill bucket slides onto 3" or 4" fill and vapor-return riser pipes and is then secured in place. Slip-on spill-containers provide a fast, economical way to replace uncontained manholes or fill boxes. An optional suction hand pump allows contained product to be evacuated into the tank. OPW Slip-On Spill-Containers are available in 5- and 15-gallon capacities.

Below-Grade Spill-Containment Manholes

OPW Below-Grade Spill-Containment Manholes are used in new tank or riser pipe installations. The watertight spill-containment chamber is installed completely below grade-level. A grade-level manhole cover lies flush with the driveway grade to reduce a tripping hazard and the potential for damage from snow-plows and traffic. Surface water drains into the backfill between the manhole skirt and the exterior of the containment bucket. Below-grade spill-containers are available in thread-on and slip-on configurations in 5- and 15-gallon capacities.

Fibrelite Multiport Spill-Containment Manholes

OPW Fibrelite Multiport Spill-Containment Manholes provide spill-containment for underground storage tank (UST) fill pipes and vapor recovery risers.

Multiports are installed over the top of tank sumps to preserve future access to the tank top and to facilitate containment of tank-bung fittings.

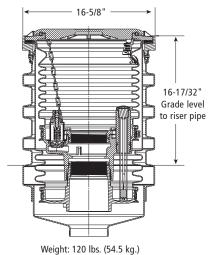

OPW EDGE™ Double-Wall Spill-Containers

Designed in collaboration with contractors and end-users, the OPW EDGE™ Double-Wall Spill-Container installs in the same space as single-wall buckets. The EDGE™ delivers best-inclass features that significantly improve reliability, installation, testing and ease of serviceability. The EDGE™ exceeds the performance levels of all other double-wall spill-containers.

- Fully Testable
- Unbeatable installation ease
- Uses existing riser pipe
- Unparalleled serviceability
- Superior quality
- Significantly reduces installation time and labor costs

Sealable Cover Option Available

Materials

Cover: Cast iron

Mounting Ring: Duragard®-coated

ductile iron

Bellows: Polyethylene **Base:** Cast iron E-coating **Clamps:** Stainless-steel

Seals: Buna-N

Features

- Top-Mounted Vacuum Test Port
 - For quick and easy access
- Superior Visual Gauge
 - No messy dipsticks to contend with
 - Significantly simplifies and reduces testing time
- Ease of Access to the Electronic Sensor for Testing
 - · Easy access for testing
 - Located to eliminate damage potential during product drops
- Roto-Molded Primary & Secondary Buckets
 - Thicker walls for greater durability and reliability
- Ribbed Polyethylene Skirt Design
 - · Roto-molded for long-life durability
 - Provides rigidity for added durability
 - Provides handles on all sides for ease of installation
- Patent-Pending Socket Design
 - Enables the EDGE[™] to install into the space of a single-wall spillcontainer
 - Helps to align bucket on riser

- Provides machined sealing face for drop tube
- Improves overall drop tube sealing integrity
- Eliminates face seal adaptors or de-burring of the riser pipe to obtain a flat surface for the drop tube

Patent-Pending Removable Adaptor

- Allows for quick and easy access to drop tube
- Eliminates the need for cumbersome chain wrenches
- Bellow Seals
 - Improves overall sealing integrity
 - Eliminates mess and curing time found in sealants
 - Reduces service time and costs
- SC Test
 - Vacuum Testing Lid for Edge, 2200, 21000 and Multiports

OPW EDGE 1™ Single-Wall Spill-Container

Introducing an advanced single-wall spill-container – the new EDGE 1™ by OPW. The new EDGE 1[™] is rugged, easier to install and service, upgrades to a double-wall and is more reliable than current single-wall spill-containers available today. Leading-EDGE design features and superior materials of construction combine with expert spillcontainment engineering excellence to deliver more benefits than any other single-wall spill-container, making the FDGF 1[™]

number one in:

- Installation and upgradeability ease
- Serviceability ease
- Durability and long-life reliability

A = 16 5/8" $B = 16 \, 15/32$ " $C = 25 \frac{1}{4}$ "

Replacement Parts/Accessories

Part #	Description
201689	Mounting Ring Seal
201530	Snow-Plow Ring
201692	O-Ring, Nipple Adaptor
1-21CC	Cover
203035	Sealable Cover Ring
H12229M	Cover Seal
SC-xxxx	(Xxxx=Color) Sealable Cover
1DK-2100-EVR	Drain-Valve Sub Assembly
203193-KIT	Replacement 5-Gallon with Drain-Valve
203194-KIT	Replacement 5-Gallon with Drain Plug
IP-2105	Hand Pump

Materials

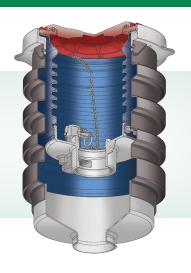

Cover: Cast iron

Mounting Ring: Duragard®-coated

ductile iron

Bellows: Polyethylene Base: Cast iron E-coating Clamps: Stainless-steel

Seals: Buna-N

Features

- Upgradeable to a double-wall bucket without breaking concrete
- Quick, easy replacement of spill bucket and mounting ring without breaking concrete - significantly reduces labor time and cost
- High-quality materials of construction
 - Roto-molded technology provides for thicker, more robust bellows
 - Heavy-duty ductile-iron mounting ring - provides superior long-term reliability and damage protection against traffic drive-over and snow-plows
 - The integral pull-to-open drain

- valve uses non-corrosive and stainless-steel materials, unlike our competitors, which have corrosive materials in their design (a drain plug version is also available)
- Thread-on bucket design ensures leak-free integrity, especially in the event of ground movement
- Corrosion-resistant polyethylene skirt - increased rigidity and durability, superior reliability over corrosive metallic skirts
- Unique concrete anchoring ring - wide-lip and four (4) convenient anchoring ears provide for better anchoring and longevity

Ordering Specifications

OPW Threaded Riser Adaptor (Face Seal Adaptor)

An OPW FSA-400 Threaded Riser Face Seal Adaptor provides a flat, true sealing surface on threaded pipes where a gasket seal exists per EVR requirements. The FSA-400 is installed on the fill pipe riser below the spill-container to provide a true sealing surface for the drop tube flange on the overfill-prevention valves. The FSA-400 is also required on tank-gauging risers and optional on vapor risers and rotatable adaptors.

OPW 1-2100-EVR Series Direct-Bury Spill-Containment For CARB/EVR

The OPW Thread-On 1-2100-EVR
Series Spill-Containers are certified
for installation on OPW Phase I EVR
Systems. All Fill-Port Spill-Containers
feature an enhanced 1DK-2100-EVR
vapor-tight drain valve (DEVR Models).
The Vapor Return Spill-Containers (PEVR
Models) feature a permanent plug in
the drain port as per EVR requirements.
The 1-2100-EVR Series Thread-On SpillContainers are available in Composite
or Cast-Iron bases with either 5- or
15-gallon buckets.

The FSA-400 Threaded Riser Face Seal Adaptor is installed on the fill pipe below the spill-container to provide a true sealing surface for the drop tube flange on the 61SO and 71SO overfill-prevention valve. The 61SO and 71SO series valves are installed in the base of the OPW EVR spill-container with the patent-pending 61JSK Jack Screw device. This configuration allows liquid in the spill-container to be drained directly into the drop tube thereby isolating the drain valve from the tank ullage, eliminating a notorious leak point in previous systems.

OPW 1-2100 Series Thread-On Spill-Containers

OPW Spill-Containment Manholes are designed to prevent spilled product from entering the soil near the fill and vapor-return riser connections on underground storage tanks during normal tank filling operation, or in the event of tank overfill. The spill-containers catch spillage to help prevent soil contamination and groundwater pollution.

OPW Thread-On Spill-Containment Manholes are generally used on new tank or riser pipe installations.

Materials

Cover: Cast aluminum or cast-iron **Mounting Ring:** Cast iron E-coating

Bellows: Polyethylene

Base: Cast iron E-coating or Duratuff® II

Clamps: Stainless-steel

Seals: Nitrile

1-2115, 15-Gallon

Features

- Easy Installation reduces
 job-site time and installation costs.
 OPW Thread-On Spill-Containers
 screw directly onto 4" NPT riser. No
 external connections to make; adjust
 the final grade height and support
 the unit with backfill
- Integral Pull-to-Open Drain-Valve – allows high-speed drainage of excess product into the tank.
 Designed with a convenient self-cleaning seal and removable screen for easier component cleaning
- Capacity available in a true 5-gallon capacity as well as 15-gallon capacity
- Rain-Shedding Cover available in either cast-aluminum or cast-iron, this unique design incorporates a seal in the underside of the cover. The seal seats between two dams on the mounting ring to prevent surface water from entering the spill-container.
- Fuel Compatibility designed to accommodate the fuels of the future, including methanol, ethanol and fuels with MTBE additives

- Product Identification Tags –
 available for both the cover and
 bucket to positively identify the
 product contained in the UST with
 standard API symbols (See product
 I.D. tag specification page for more
 information: page 85.)
- Heavy-Duty Mounting Ring –
 the angled ramp design offers
 superior protection against snow plow and traffic damage, and
 provides for secure concrete
 anchoring
- Corrugated Bellows can be adjusted +/- 1" for desired grade-level
- Duratuff® II or Cast-Iron Base composite Duratuff® II material is lightweight, durable, and conductive. A rugged, optional, cast-iron base is also available.
- Highway 20 Rated (H20 /HS20)
 all OPW spill-containers and manholes exceed the requirements of the Highway 20 rating

OPW 1-2115, 15-Gallon

*Subtract 2" from height dimension for Cast-Iron Base Models.

NOTE: 20¹⁷/₃₂" dimension is height from riser pipe to finish grade (+1" for slope)

TC-400 Torque Cap

Provides an easy means of threading a 4" NPT nipple into a spill-container. The OPW TC-400 coupled with the OPW 61SA-TOOL can provide the necessary torque requirements for installing adaptor nipples for spill-containers. The TC-400 can easily be removed without disturbing the installed threaded nipple. The TC-400 also eliminates the need for a strap or chain wrench.

4" Threaded Pipe Nipple

OPW pipe nipples are CNC machined, providing a smooth sealing surface where a gasket seal exists. Available in various lengths to custom fit the necessary height requirements for Fill and Vapor Adaptors.

61JSK Jack Screw Device See page 84 for detailed information.

FSA-400 Face Seal Adaptor See page 84 for detailed information.

The following products are in compliance with California Water Resources Control Board (W.R.C.B.) for coating of buried metal components, such as stainless-steel clamps or entire Spill-Containment Bucket bottoms.

OPW 1SC-2100-EVR Series Sealable Cover Spill-Containers

OPW Spill-Containment Manholes are designed to prevent spilled product from entering the soil near the fill and vaporreturn riser connections on underground storage tanks during normal tank-filling operations, or in the event of tank overfill. The spill-containers catch spillage to help prevent soil contamination and groundwater pollution. The OPW 1SC-2100-EVR Series Sealable Cover Spill-Containers are designed to eliminate the problems associated with water entering grade-level spillcontainers. The operation of the cover is similar to that of a "plumbers plug." When the lever is latched down, the plates are drawn together, expanding the seal against the machined mounting ring wall. The 1SC-2100-EVR spill-containers are ideal for areas with a high water table, areas subject to tropical rain and standing water, and cold regions where melting snow and road salt can enter standard spill-containers.

Materials

Cover: Cast aluminum

Cover Seal: Low-swell nitrile

Lever: Bronze

Mounting Ring: Teflon® plasma-

coated cast-iron

Bellows: Polyethylene

Base: Duratuff® II or cast-iron

E-coating

Clamps: Stainless-steel Seals: Low-swell nitrile

Lid Features

- Simple "Plumbers Plug" Operation

 cover seal is expanded against
 mounting ring wall
- Vertical Sealing Surface prevents gravel and debris from damaging or interfering with the cover seal
- Machined Sealing Surface ensures watertight seal. Teflon®coated stainless-steel
- Field Replaceable Seal designed for all-weather performance
- Clear Anodized Aluminum Top
 Plate deters cover theft
- Potted Hinge Mechanism prevents ice and debris from hindering lever operation
- Product Identification Tags –

Additional Features

available for both the spill-container cover and bucket to positively identify the product contained in the UST with standard API symbols (See product I.D. tag specification page for more information: page 87.)

- ◆ Capacities 5- and 15-gallon
- Fuel Compatibility designed to accommodate all fuels, including methanol, ethanol and MTBE
- Highway 20 Rated (H20/HS20)
 all OPW spill-containers and manholes exceed the requirements of the Highway 20 rating

OPW 1-2105 Series Slip-On Spill-Containers

OPW Slip-On Spill-Containment
Manholes are used on new or existing
UST riser pipes. The spill bucket slides
onto 3" or 4" fill and vapor-return
riser pipes and is then secured in place.
Slip-on spill-containers provide a fast,
economical way to replace uncontained
manholes or fill boxes.

Materials

Cover: Cast aluminum or cast-iron **Mounting Ring:** Duragard®-coated

cast-iron

Bellows: Polyethylene

Base: Duratuff®

Clamps: Stainless-steel

Seals: Nitrile

Features

- Easy Installation clamps directly onto a 4" riser pipe. Reduces job-site time and installation costs; no need to remove, cut or thread riser pipe
- Capacity available in a true 5-gallon capacity as well as a 15-gallon capacity
- Rain-Shedding Cover available in either cast-aluminum or cast-iron, this unique design incorporates a seal in the underside of the cover. The seal seats between two dams on the mounting ring to prevent surface water from entering the spill-container
- Fuel Compatibility designed to accommodate the fuels of the future, including methanol, ethanol and fuels with MTBE additives
- Optional Suction Hand Pump 8 oz. per stroke capacity for highspeed evacuation of excess liquid. Allows user to pump product back into the tank or out of the spillcontainer for proper disposal

- Product Identification Tags available for both the spill-container cover and bucket to positively identify the product contained in the UST with standard API symbols (See product I.D. tag specification page for more information: Page 101.)
- ◆ Offset-Base Pipe Entry 1" offset allows for proper clearance with close fill/vapor riser spacing on tanks
- Heavy-Duty Mounting Ring the angled ramp design offers superior protection against snowplows and provides for secure concrete anchoring
- Highway 20 Rated (H20/HS20)
 all OPW spill-containers and manholes exceed the requirements of the Highway 20 rating
- Compatible with DEF fuels

OPW 1-2105 Series Slip-On Spill-Containers

OPW 1-2155, 15-Gallon

OPW 101BG-2100 Series Below-Grade Spill-Containers

OPW Below-Grade Spill-Containment Manholes are used in new tank or riser pipe installations. The watertight spill-containment chamber is installed completely below grade-level. A grade-level manhole cover lies flush with the driveway grade to reduce a tripping hazard and the potential for damage from snow-plows and traffic. Surface water drains into the backfill between the manhole skirt and the exterior of the containment bucket. Below-grade spill-containers are available in thre ad-on and slip-on configurations in 5- and 15-gallon capacities.

101BG Slip-on Model Instruction Sheet Order Number: **H12579M**

101BG-2100 Instruction Sheet Order Number: **H12260M**

Important Notice: The
OPW101BG-2100 Spill-Container
Series does not prevent contamination
of the soil or backfill resulting from
spills flowing between the spillcontainer and the outer shell. Ground
contamination may result if the spillcontainer is filled beyond capacity,
or if a spill occurs outside the spillcontainment cell.

 Highway 20 Rated (H20/HS20) – all OPW spill-containers and manholes exceed the requirements of the Highway 20 rating.

Materials

Grade Cover: Fiberglass-reinforced

composite (steel optional)

Lid: Glass-reinforced composite

Lever, top case: Polyethylene

Outer shell: Polyethylene,
powder-coated steel

Containment cell: Polyethylene

Base: Duratuff® II or cast-iron

Features

- Pull-to-Open Drain-Valve allows high-speed drainage of excess product into the tank. Designed with a convenient self-cleaning seal and removable screen for easier component cleaning (CARB Approved)
- Capacity 5-gallon and 15-gallon capacities
- ◆ Outer Shell the outer shell isolates the containment vessel from the surrounding concrete and gravel. This high-density polyethylene shell is designed to provide space between the outer shell and the containment vessel to allow any surface water that enters to flow into the backfill, not the containment vessel. Elimination of water in the spill-container reduces product contamination and ice formation during cold winter months
- ◆ Vapor-Tight Lid a unique, hinged and sealed containment-vessel lid provides a vapor-tight seal, designed to prevent vapors from escaping at ground level while eliminating the accumulation of dirt and water that contaminate fuel. Incorporating a special lid-interlock design, the grade-level cover cannot be replaced on the outer shell without the lever being in the closed and locked position

- ◆ Composite Grade Level Cover made of sturdy fiberglass-reinforced composite, the grade cover is less prone to theft than aluminum covers, and lighter in weight than castiron. In addition, the cover lies flush with the actual grade so no ramps are required to support the cover, eliminating snow-plow hazards and "speed bumps" (Optional steel-plate cover is also available)
- Fuel Compatibility designed to accommodate the fuels of the future, including methanol, ethanol and fuels with MTBE additives
- ◆ Easy Installation reduces job-site time and installation costs. Simply thread the Duratuff® II base (cast-iron base is optional) onto a standard 4" Schedule 40 pipe. Guides are provided to assure proper positioning of the spill-container. The hinged lid orientation is adjustable during installation for site-specific placement
- Product Identification Tags available for both the spill-container cover and bucket to positively identify the product contained in the UST with standard API symbols (See product I.D. tag specification page for more information: page 91.)

OPW FibreTite Multiport Spill-Containment

OPW "FibreTite" Multiport Spill-Containment Manholes provide spillcontainment for underground storage tank (UST) fill pipes and vapor recovery risers.

Multiports are installed over the top of tank sumps to preserve future access to the tank top and to facilitate containment of tank-bung fittings.

OPW "FibreTite" watertight covers are easy to remove. The composite manhole covers are available with center or offset port for access to fill risers.

Materials:

Cover: Fiberglass Frame: Fiberglass Skirt: Fiberglass

Features & Benefits:

- Lightweight reduce risk of back, foot and hand injuries
- UV resistant
- Standard duty (20-ton load rating)
- No bolts required to seal top cover
- Anti-slip surface
- Composite construction; does not corrode
- Watertight, sealed design
- Monolithic structure eliminates delaminating

- Ergonomic, single-person removal and replacement with Fibrelite lifting handle
- Easy access watertight sump inspection port
- Replaceable double-wall spill-containment
- ◆ Easy access to overfill-prevention valve

OPW FibreTite Multiport and Sump System Kit Includes:

- Multiport Cover
- Frame
- Skirt
- Spill-Containers
- Port Covers
- Shroud Boot
- Clamping Kits
- Top Hat

- Sump Base

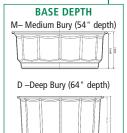

- Water-Spill Platform

Model Descriptions

- ◆ OPW 411 Series features a flush-mounted manhole lid and raised dual dam-and-groove-spill-container rings, with P2105 Buckets using OPW 1-2105 Style Slip-On 5-gallon containers. Base is standard 1" offset from center and can be used for 12", 14", 16" or wider riser spacing. Optional 1P-2105 Hand Pump available
- OPW 500 Series (511 / 521) EVR Multiport – features a flush-mounted manhole lid and raised dual dam-andgroove-spill-container ring, with P511-EVR Buckets using OPW 1-2100 Style Thread-On Spill-Containers. All Fill Ports in these spill-containers feature an enhanced 1DK-2100-EVR vaportight drain valve. The Vapor Return Spill-Container features a permanent plug in the drain port as per EVR requirements. EVR Multiport Thread-On On Spill Containers are available in composite or cast-iron bases with 5-gallon buckets. Drain-Valve Spill Bucket & Plug Spill Bucket standard on Dual Ports, Drain-Valve Spill Bucket standard on Single Port
- Required for EVR APPLICATIONS the FSA-400 Threaded Riser Face Seal Adaptor is installed on the fill pipe below the spill-container to provide a true sealing for the drop tube flange on the 71SO overfill-prevention valve. The 61SO and/or 71SO series valve is installed in the base of the OPW EVR spill-container with the patent-pending 61JSK jack screw device. This configuration allows liquid in the spillcontainer to be drained directly into the drop tube, thereby isolating the drain valve from the tank ullage, eliminating a notorious leak point in previous systems

Features

- Contractor-Friendly Installation studded mounting ring simply bolts together inside the spill-containment bucket. No need to align bolt holes in the manhole cover
- Rain-tight Service nitrile gaskets on the manhole and spill-bucket mounting rings help prevent contamination of the sump area
 - from surface water intrusion
- Highway 20 Load Rating the rugged diamond plate steel manhole covers, as well as the ductile iron (RT) or aluminum (SC) spill-container covers meet H20/ HS20 Load Rating requirements
- ◆ Spill-Container and Manhole Positive I.D. System – special recesses cast into spill-container covers allow product I.D. tags to be attached to the lids. Matching bucket tags can be affixed to the inside of the spill container to prevent covers from getting switched
- ◆ Fill/Vapor Ports configurations are available to accommodate a single fill riser, dual ports for both a fill and vapor riser, and triple and quad ports for multiple fill and vapor risers. Ports can be supplied with or without containment buckets
- ◆ Port Configurations standard port locations match the popular riser spacings (16" or 24") and bung configurations on underground storage tanks. Custom port locations are easily accommodated. For riser spacings less than 16", old-style buckets must be used
- CARB Certified 500 Series CARB EVR Approved Executive Order #VR-102
- Manhole Cover Sizes standard bolt-down manhole cover diameters of 30" (76 cm), 37" (94 cm), 42" (107 cm) and 48" (122 cm) allow ample access to the sump area. Heavy-duty reinforced lid options are also available upon request

OPW 400 and 500 Series Multiport Spill-Containment Manholes

OPW Multiport Spill-Containment Manholes provide spill-containment for underground storage tank (UST) fill pipes and vapor recovery risers in a completely integrated single manhole package. Multiports are installed over the top of tank sumps to preserve future access to the tank top and to facilitate containment of tank-bung fittings. OPW offers a vast array of standard multiport configurations and options, in addition to an almost unlimited ability to provide custom solutions for virtually any spill-containment application.

- ◆ Spill-Container Cover Options standard spill-container options include the patented OPW dam-and-groove rain-tight (RT) design and the watertight Sealable Cover (SC) "plumber's plug" design. The rain-tight cover features a finger-grip lifting facility and an integral seal. The Sealable Cover features a cam-operated mechanism that expands the seal against the vertical wall of the mounting ring. Both of these water-shedding covers are protected by raised mounting rings.
- ◆ Fastener Options two types of fasteners are available to secure the manhole lid and monitoring port to mounting rings. Standard are 5/16"-18 hex-head bolts. Optional are OPW Roto-Lock Fasteners. The OPW Roto-Lock system enables a secure, watertight connection without the need to locate threaded bolt holes on the mounting ring.
- Powder-Coated Rings & Covers available upon request.
- Replacement Covers see Part Number Configurations at www.opwglobal.com.

Multiport Manhole Water-Shroud System Option

The new OPW Multiport Manhole Water-Shroud System (MPWS) is designed to completely isolate surface water and condensation from the tank sump. The MPWS features an injection-molded fiberglass Water-Shroud lid that mates to a standard tank sump top hat reducer. This new bolt-down design allows even compression to facilitate watertight sump access. Shroud Boots isolate the spill-container buckets using stainlesssteel band clamps, which provide a tight seal between the water shroud top hat and the underside of the spillcontainer mounting rings. A 6" Sump Inspection Port is provided on each FRP Cover, allowing full inspection access through the Multiport Gauge Port. The OPW Water-Shroud system is available in 33" and 36" models. The MPWS Water-Shroud is sold separately.

Bolt-Down Manhole Water- Shroud System Option

The Bolt-Down Multiport Water Shroud (MPWS-BD) is designed to mate with the OPW Multiport. The MPWS-BD isolates surface water and condensation from Tank Sumps.

Shroud boots isolate the spill-container buckets using stainless-steel band clamps, providing a tight seal between the water-shroud top hat and the underside of the spill-container-mounting ring. Bolts on the outer edge of the shroud cover secure it to the top hat. Available in 33 " and 39 " diameter covers.

OPW 106 Identification Marker

OPW 106 Identification Markers are used to identify the grade product stored in underground tanks. These markers are easily set in concrete, and once set, are permanent. The letter plate is recessed into the face of the base and fastened with two screws. The raised letters are easy to change when the product is changed. Letters available are P, R, U, SU, X, DL. Numbers 1, 2, 3, 4.

Materials

Base And Anchor Shank: Aluminum Letter Plate: Cast aluminum

Screws (2): Brass

Spill-Container Product Identification Tags

OPW Color-Coded Spill-Container Tags positively and conspicuously identify tanks, preventing costly and dangerous product-drop mistakes. Simply "peel and stick" the high-visibility color inserts into the special recesses cast into the spillcontainer cover.

Matching bucket tags, supplied with tie wraps, are permanently affixed inside the spill-container to help prevent covers from getting switched.

Features

- Unique Fiberglass Embedment Process - ensures that the color identifiers won't scratch, crack, peel, weather or fade, even in gasoline and the harshest of environments
- Compatible with all OPW 1-2100, 1-2200 and 1-3100 Series Spill-Containers, including aluminum, cast-iron, sealable cover and 101BG Composite Cover models. Also compatible with 111 Series, Multiport Spill-Containers and OPW 104FG/104C Manhole Covers
- Available in All API Product I.D. **Designations**

UST Fill-Pipe Connection Equipment

Tight-Fill Adaptors and Caps

Tight-Fill Adaptors are installed in spill-containment manholes on the fill riser pipe from an underground fuel-storage tank. They mate with the gravity-drop delivery elbow on the transport truck. Tight-Fill Caps are installed on adaptors, when not in use, to prevent gasoline vapors from escaping and to prevent water, dust and debris from entering the tank.

Stage I Vapor Recovery Adaptors and Caps

Stage I Vapor Recovery Adaptors are installed in spill-containment manholes on the vapor recovery riser pipe from an underground gasoline-storage tank. They mate with the vapor recovery elbow on the delivery transport truck when recovery of gasoline vapors is required. Stage I Caps are installed on adaptors, when not in use, to prevent gasoline vapors from escaping and to prevent water, dust and debris from entering the tank.

Monitor Probe and Monitoring Well-Caps

Monitoring Probe Caps are installed on tank riser pipes to help prevent vapors from escaping or water from entering the tank. Monitoring Probe Caps include a wire-grommet fitting to accommodate the electric tank-gauge probe. Lockable Monitoring Well-Caps are installed on slotted PVC-pipe monitoring-wells to help prevent contamination from surface-water intrusion or inadvertent fuel deliveries.

OPW Adaptor & Cap-Height Profiles

The adaptor and cap dimensions below reflect the overall height and installed height of OPW adaptors and adaptor and cap combinations. The installed height is from the gasket seal to the top of the component. For example, the 61VSA height is 6 1/2", but only adds 4-7/8" to the overall height when added to the riser.

61VSA Vapor Recovery Swivel Adaptors Overall Height Installed Height 6-1/2" 4-7/8"

OPW 61SA Swivel Adaptor

Pressure-decay testing of underground storage tank systems has identified the joint between the tight-fill adaptor and the nipple or tank riser as a persistent leak point. Considerable movement takes place along the hose while the fill elbow is connected. Walk-downs and changes from one compartment to another move the hose across the pavement, rotating the elbow along with it. The result can be a loosening of the adaptor. As the adaptor backs off, the seal between it and the nipple is relaxed and a leak path is created allowing vapors to escape to the atmosphere. Vacuum-assist dispensing systems can aggravate this situation due to the slight pressurization of the UST.

The 61SA Swivel Adaptor mates with 4" top-seal delivery elbows and features a top section that rotates with hose movement while the bottom section remains securely in place maintaining seal integrity.

Features

- Dual Seals ensure a vapor and liquid-tight seal
- Conductive, Self-Lubricating Retaining Rod – ensures maintenance-free, reliable service life
- Same Internal Dimension as Standard 633T Adaptors – to minimize pressure drop and maximize flow rates for quick product delivery
- 61SALP-MA EVR Approved for E85

OPW Tight-Fill Top-Seal Adaptors

Coaxial Adaptors OPW 633TC

OPW coaxial vapor recovery fittings provide an easy, inexpensive means to convert existing conventional 4" underground storage tank fill pipes to coaxial vapor recovery installations when Stage I Vapor Recovery is required. Normally, little or no digging or breaking of concrete is necessary. Simply remove existing tight-fill adaptor and drop tube (if installation is so equipped), and insert an OPW 61TC Coaxial Drop Tube and the 633TC Adaptor. The OPW 633TC Adaptor is designed to mate with a coaxial delivery elbow.

OPW 633TCP Use On 61SOP

The OPW 633TCP Coaxial Adaptor features a poppeted vapor-return path that opens only when connected to a fill elbow. When not in use, the vapor path is sealed, preventing fugitive emissions. The 633TCP is a replacement adaptor for the 61TCP Coaxial Drop Tube, and is designed to mate with a coaxial delivery elbow.

NOTE: Poppeted fittings are certified by California Air Resources Board (CARB).

OPW 633LC

OPW 633LC Lock Clamp is designed to lock the OPW adaptor onto the riser pipe, preventing any potential vapor leaks from pressurized systems. The locking clamp slips over the riser pipe. The 633T, 633TE, or 1611 Adaptor is then threaded onto the riser pipe. Next, the lock clamp should be slid up the riser until the protrusions in the lock clamp line up with the notches in the adaptor. Once the adaptor and clamp are engaged, the lock clamp can be tightened and the adaptor will be locked onto the riser pipe, preventing it from being loosened by a delivery elbow.

Additionally, the lock clamp can be turned upside down on the riser pipe to lock the riser into the base of all OPW spill-containers, which have notches in them similar to the adaptors. Using the lock clamp in this manner will lock the riser pipe into the spill-container.

633TC & 633TCP Instruction Sheet Order Number: **H10013PA**

OPW 61SA-TOOL

The 61SA-TOOL is a wrench designed to thread on the 61SA Fill and 61VSA Vapor Adaptors. The OPW 61SA-TOOL Adaptor installation tool is required to insure proper installation of OPW rotatable swivel adaptors, thread-on spill-containers, fill and vapor adaptors, TC-400 torque cap for pipe nipples and threaded riser adaptors as per EVR requirements. The 61SA-TOOL includes provisions for the use of a torque wrench to facilitate accurate installation and testing.

OPW 634 Series Tight-Fill Top-Seal Caps

Tight-Fill Top-Seal Caps are installed on top-seal adaptors, when not in use, to prevent gasoline vapors from escaping and to prevent water, dust and debris from entering the tank.

EVR Approved for E85

OPW 634TT

The OPW 634TT is designed to mate with 4" 633T, 633TE, 61SA, 633TC, and 633TCP Top-Seal Adaptors. Heavy-duty and corrosion-resistant, the body is made of Duratuff® to help eliminate rust and oxidation for a long, maintenance-free life. The toggle lever distributes downward pressure to compress its Buna-N gasket evenly, ensuring a positive, water and vapor-tight seal. The 634TT can be locked with a padlock or wire seal.

The OPW 633TE adaptor is similar to the 633T, except it does not have internal wrenching lugs.

OPW 634TT - Metal

The 634TT-4000 is a metal top-seal cap with the same dimensions as the 634TT-7085.

OPW 634LPC Low-Profile Top-Seal Fill Cap

The OPW 634LPC Low-Profile Top-Seal Fill Cap is designed for tight installations where the clearance between the top of the fill adaptor and the underside of the spill-container cover is limited. The rugged iron lever provides a positive cam-action that seats the cap firmly in the adaptor groove for a water and vapor-tight seal. When engaged, the lockable cap adds only 1/2" to the final height of the adaptor. The 634LPC can be used with the 4" OPW 633T, 633TE, 633TC, and 61SA series top-seal fill adaptors.

OPW 61VSA Series Adaptors are EVR Approved for E85

(ĥr)

OPW Stage I Vapor Recovery Adaptors and Caps

Stage I Vapor Recovery Adaptors are installed in spill-containment manholes on the vapor recovery riser pipe from an underground gasoline-storage tank. They mate with the vapor recovery elbow on the delivery transport truck when recovery of gasoline vapors is required.

OPW 61VSA Vapor Swivel Adaptor

The OPW 61VSA Vapor Swivel Adaptor is a poppeted adaptor, designed to mate with a vapor recovery elbow, featuring a top section that rotates with hose movement while the bottom section remains securely sealed to the 4-inch tank riser.

OPW 61SA-TOOL

The 61SA-TOOL is a wrench designed to thread on the 61SA Fill and 61VSA Vapor Adaptors. The OPW 61SA-TOOL Adaptor installation tool is required to insure proper installation of OPW rotatable swivel adaptors, thread-on spill-containers, fill and vapor adaptors, TC-400 torque cap for pipe nipples and threaded riser adaptors as per EVR requirements. The 61SA-TOOL includes provisions for the use of a torque wrench to facilitate accurate installation and testing.

OPW 1611 Series Vapor Recovery Adaptor

The OPW 1611AV and 1611AVB are poppeted adaptors, designed to mate with a vapor recovery elbow, for returning gasoline vapor to the tank truck during a fuel delivery to an underground tank.

OPW Stage I Vapor Recovery Caps OPW 1711T

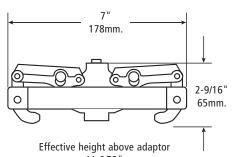

The OPW 1711T Vapor Recovery Cap is for use with the OPW 1611AV, 61VSA, 1611AVB and 1611VR Adaptors. The 1711T is installed on the vapor recovery adaptor, when not in use, to prevent vapors from escaping and to prevent water, dust and debris from entering the tank. Constructed of Duratuff® to help prevent corrosion, the OPW 1711T will couple to Civacon/OPW 4" Kamloks, and features a center post that allows an even distribution of force when coupling to the adaptor. The 1711T can be locked with a padlock.

Materials

Gasket: Nitrile

1711LPC Cap

OPW 1711LPC Low-Profile Vapor Cap

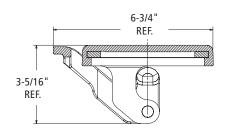

The OPW 1711LPC Low-Profile Top-Seal Vapor Cap is designed for tight installations where the clearance between the top of the vapor adaptor and the underside of the spill-container or manhole cover is limited. The rugged iron lever provides a positive cam-action that seats the cap firmly in the adaptor groove for a water and vapor-tight seal. When engaged, the lockable cap adds only 1/2" to the final height of the adaptor. The cap is powder-coated API Orange to signify vapor recovery. The 1711LPC can be used with the OPW 3" 1611AV, 1611AVB and 61VSA series vapor adaptors.

OPW 1711 Series Caps are EVR Approved for E85

OPW Monitoring Well/Pipe/Probe Caps

Monitoring Probe Caps are installed on tank riser pipes to help prevent vapors from escaping or water from entering the tank. Monitoring Probe Caps include a wire-grommet fitting to accommodate the electronic tank-gauge probe.

OPW 62M Monitor Probe Cap & Adaptor Kit

The 62M Monitoring Probe & Adaptor Kit includes a 4" side-sealing adaptor, 4" side-sealing cap (tapped), and a 3/8" or 1/2" wire-grommet to secure the cable from an electronic tank-gauge probe in the tank riser pipe. A bracket, located on the underside of the cap, is provided to install a tension wire to relieve strain on probe cables. The 62M is gasketed to seal against water and debris entering, or vapors from escaping the tank. The cap includes provisions for a padlock to secure entry.

OPW 116M

The OPW 116M Monitor Probe Cap is a standard 116 4" threaded pipe cap, drilled and tapped to accept a 3/8" or 1/2" wire-grommet to secure an electronic tank-gauge probe in a tank riser pipe. The 116M is gasketed for vapor and watertight service.

OPW 116

The OPW 116 Pipe Cap threads onto 4" riser pipes and provides access to ball-float extractor fittings and underground storage tank-bung openings. The 116 is constructed of composite Duratuff® to prevent rusting or corroding of steel riser pipes.

OPW Monitoring Well/ Pipe Caps

OPW 634TTM Well Cap Kit

The OPW 634TTM Well-Cap Kit is designed to install onto a 4" slotted PVC monitoring-well. The cap is marked "Do Not Fill" to clearly identify the monitoring-well. A cast-aluminum adaptor ring is set-screwed to the top of the slotted PVC well, and the cap mates with the ring. The 634TTM can be locked with a padlock or a wire seal.

OPW 62PMC Lockable Monitoring Cap

The OPW 62PMC is designed to thread or solvent-weld to a 61SPVC 4" slotted PVC monitoring-well pipe. The 62PMC is constructed of durable PVC with a stainless-steel hinge pin for resistance to rust and corrosion. An API warning statement, "Monitoring-Well...Do Not Fill," is permanently molded into the cap. The 62PMC can be locked with a long-shank padlock.

OPW 61SPVC Slotted PVC Pipe

The OPW 61SPVC Slotted PVC Pipe is designed for monitoring-well applications. The 61SPVC is constructed of durable Schedule 40 PVC pipe, PVC bottom plug with slot thickness of .020".

OPW Loose-Fill Pipe Cap Assemblies

Loose-Fill Pipe Cap Assemblies are installed in spill-containment manholes on fill riser pipes from an underground fuel-storage tank. They are used when a tight-fill connection is not required.

OPW 83

The OPW 83 Fill Cap Assembly threads onto the fillpipe of an underground or aboveground tank. The screw-on cap is gasketed to ensure a tight seal against air, water, dust and debris. The 83 can be locked with a padlock or wire seal.

OPW 269 Sanitary Tank Hatch

The OPW 269 Sanitary Tank Hatch threads onto the fill pipe of an underground sanitary waste-disposal tank. The 269 is foot-operated and quick-opening/closing for clean emptying of sanitary waste from RVs, campers and travel trailers. The non-recessed design provides straight-through flow to eliminate entrapment of waste materials.

Testable 71SO Overfill-Prevention Valve

The OPW Testable 71SO helps you be in compliance with the NEW EPA Regulations

- The Only UST Overfill-Prevention Valve that is testable without removal from the tank
- A testable feature is attached to a sealed plug in the inlet Adaptor
- The plug is easily accessed with a standard socket extension
- Attached to the extension, the testable feature can be raised and lowered, allowing the user to inspect the valve operation from the inside of the tube
- The plug is then easily reinstalled to the inlet Adaptor from grade
- No fill components, overfill valves, or vapor-tight seals have to be removed - avoids compromising vapor-tight compliance
- The Testable 71SO uses the same industry leading overfill-prevention technology for strong vapor-tight compliance
- B100 Compatible (ULC)

NOTE: The OPW 71SO is designed for use on tight-fill gravity-drop applications only. Do not use for pressure-fill applications.

Overfill-Prevention and Venting Equipment

71SO Testable Overfill Valve

The OPW Testable 71SO-T Overfill-Prevention Valve is the easiest, quickest and most cost-efficient way to ensure that your overfill valves will operate when called upon - verifiable without removing them from the tanks. The OPW 71SO-T Testable Overfill-Prevention Valve is the only UST Overfill-Prevention Valve that is testable from the surface without removal from the tank.

61SO & 71SO Overfill-Prevention Valves

The OPW 61SO and 71SO vapor-tight Overfill-Prevention Valves are two-stage shut-off valves designed to prevent the overfill of underground storage tanks by providing a positive shut-off of product delivery. Models of the 61SO and 71SO are available to meet virtually any UST application, including two-point, coaxial, poppeted coaxial and remote fill. The 71SO vapor-tight model is designed for enhanced vapor recovery (EVR) applications. Both the 61SO and 71SO are designed for use on tight-fill gravity-drop applications only, and can be installed in the fill riser of both new and existing underground storage tanks.

Ball-Float Vent Valves and Extractor Fittings

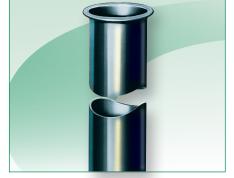

OPW Ball-Float Vent Valves protrude into underground storage tanks from the Stage I vapor-return riser pipe. As the tank becomes full during a product drop, the ball seat restrict the flow of vapors back to the transport truck or through the tank-vent. As the vapors are compressed in the tank, product flow into the tank is severely restricted.

OPW ball-floats are mounted in OPW extractor fittings to maintain access through grade-level manholes.

Drop Tubes and Accessories

OPW drop tubes are installed inside tank fill risers to prevent fuel from contacting riser joints. Drop tubes extend close to the bottom of the tank to minimize turbulence and vapor production. Tank-bottom protectors are installed on the bottom of drop tubes to prevent tank erosion at the fill point.

Pressure Vacuum Vents and Adaptors

Pressure Vacuum Vents are installed on the top of vent pipes from underground or aboveground fuel-storage tanks. The vent-cap and internal wire screen are designed to protect the tank-vent lines against intrusion and blockage from water, debris or insects. A normally closed poppet in the valve opens at a predetermined pressure or vacuum setting to allow the tank to vent.

OPW 71SO Overfill- Prevention Valves

The CARB-certified OPW 71SO vapor-tight Overfill-Prevention Valve is designed to prevent the overfill of underground storage tanks by providing a positive shut-off of product delivery. The shut-off valve is an integral part of the drop tube used for gravity filling. The OPW 71SO allows easy installation (without breaking concrete) and requires no special manholes.

The OPW 71SO is a vapor-tight twostage shut-off valve. When the liquid level rises to about 95% of tank capacity, the valve mechanism is released, closing automatically with the flow. This reduces the flow rate to approximately 5 gpm through a bypass valve. The operator may then stop the filling process and disconnect and drain the delivery hose. As long as the liquid exceeds the 95% level, the valve will close automatically each time delivery is attempted.

If the delivery is not stopped and the liquid rises to about 98% of tank capacity, the bypass valve closes completely. No additional liquid can flow into the tank until the level drops below a reset point.

NOTE: The 71SO Overfill-Prevention Valve can be adjusted to shut off at any desired tank capacity. Please contact the Authority Having Jurisdiction (AHJ) and review local, state and national codes to determine the regulatory requirements governing shut-off capacity in your region, as well as take into account other considerations such as extreme tank tilt. In all cases, the upper tube must protrude into the tank at least 6 1/2" to ensure that the valve can shut off flow into the tank completely before the top of the tank is wetted as per EPA requirements.

71SO Instruction Sheet Order Number: **H15524PA**

Materials

Valve Body: Cast aluminum

Float: Nitrile rubber, closed-cell foam

Valve: Aluminum Seals: Viton®

Upper & lower Drop Tube: Aluminum

Plastic parts: Acetal Hardware: Stainless-steel

Features

- Simple, Easy and Quick Installation

 no excavation or special manholes required.
- Economical costs a fraction of expensive, complicated and difficult-to-install valves.
- Furnished Complete supplied with new upper and lower drop tubes, mounting hardware and thorough instructions for quick job-site time.
- Completely Automatic Operation –
 no pre-checks to perform, no resets and
 no overrides to be broken
 or abused.
- No Pressurization of the Tank operates directly from liquid level.
- Will Accept a Dipstick for Gauging

Important

In order to prevent product spillage from the Underground Storage Tank (UST), properly maintained delivery equipment and a proper connection at the tight-fill adaptor are essential. Delivery personnel should be managed and trained to inspect delivery elbows and hoses for damaged and missing parts. They should always make certain there is a positive connection between the adaptor and elbow. If delivery equipment is not properly maintained, or the elbow is not securely coupled to the adaptor, a serious spill may result when the OPW 71SO closes, causing a hazard and environmental contamination.

NOTE: The OPW 71SO is designed for use on tight-fill gravity-drop applications only. Do not use for pressure-fill applications.

- Retrofits Directly for both new and existing tanks with 4" fill risers.
- Quick Drain Feature automatically drains hose when head pressure is relieved.
- Best Flow Rate in The Industry*
- * OPW Test Lab results

Advantages of Overfill-Prevention Compared to Overfill-Warning Systems:

- Completely Automatic Operation

 does not rely on the alertness or speed of response of the delivery attendant for certainty of overfill-prevention.
- Keeps the Top of UST "Dry," per EPA Requirements – eliminating possible leaks at loose bung fittings and the need for double containment on vent lines.
- Does Not Rely on Pressure in the UST to Stop Flow – allowing

- faster fill times and reducing spill risk.
- Speeds Delivery Operations –
 product flows unimpeded into the
 tank until the hose "kick" that
 accompanies the valve shut-off
 provides a clear signal that the
 liquid has reached the shut-off level.
- Simple and Inexpensive
 Installation in both two-point and coaxial-fill applications, no additional excavation, manholes or vent piping are required.

Listings and Certifications

OPW 71SOM is EVR Approved for E85

Raising The Standard In Overfill-Prevention

From the company that brought you the industry standard OPW 61SO, OPW raises the standard with the introduction of the **71SO Overfill-Prevention Valve** – breakthrough innovation that takes overfill-prevention to a whole new level of overfill perfection.

- Eliminates curing issues due to hot or cold temperatures
- Easier, quicker installation
- Higher quality more reliable installation
- Lower costs
- Greater protection against fugitive emissions and pressure decay
- Fastest flow rate in the industry

The new 71SO is a two-stage, positive shut-off valve, providing completely automatic operation with no pre-checks to perform, no resets, and no overrides to be broken or abused. The valve closes when the tank level rises to 95% capacity and provides a special bypass valve so the tank can be filled to a maximum capacity of 98%. The 71SO is available for direct-bury and remote applications.

All Vapor-Tight Overfill Valves are CARB EVR Certified

71SO Vapor-Tight Remote Fill

The OPW Vapor-Tight Remote Fill is designed for two-point vapor-tight remote-fill applications, where the fill point is not directly over the UST. A CARB-approved vapor-tight 71SO overfill valve is installed in the sump through a riser pipe directly over the tank.

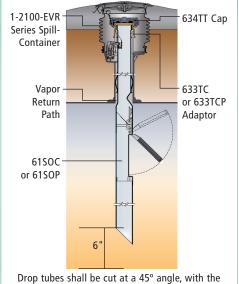

61SOR Remote-Fill

The OPW 61SOR is designed for two-point remote-fill applications, where the fill point is not directly over the UST. The valve is installed in the tank through a riser pipe directly over the tank. A window in the drop tube is aligned with the entrance of the fill pipe from the remote-fill location to allow product to flow into the drop tube and down through the valve. A riser seal prevents product from flowing into the tank from outside the drop tube. A "trap door" assembly installed in the riser above the tank provides access for a gauging stick. Trap door, adaptor and cap are included with 61SOR.

Drop tubes shall be cut at a 45° angle, with the top of cut no greater than 6" from the bottom of the tank (Or per local regulations)

61SOC Coaxial

The OPW 61SOC is used for coaxial-fill applications, tanks equipped with a single product/vapor-return connection. The 61SOC replaces the standard coaxial-fill drop tube in a 4" riser fill pipe.

OPW 233 Series Extractor Fittings

OPW 233 Series Extractor Fittings thread into 4 NPT openings on underground storage tanks. A 4" riser pipe threads into the top of the 233 for use in Stage I Vapor Recovery or to access a ballfloat. The 233 Extractor Fittings have threaded single-outlet connections for attaching tank-vent lines or multiple outlets used to manifold tank-vents or accommodate Stage II vapor-return lines from dispensers. Internal threads on the 233 are designed to install a ball-float or test plug in the extractor.

OPW 233

The OPW 233 Extractor Fittings are designed for use with all OPW 53VML Ball-Float Vent Valves that include an extractor cage (the OPW 233 does not include an extractor cage). The 233 Extractor incorporates either single-outlet or multiple-outlet threads.

OPW 233VP Extractor Test Plug

The OPW 233VP Extractor Fitting Test Plug is used on all OPW 233 Series Extractor Fittings. The 233VP incorporates an O-Ring above the threads (on the plug) to isolate the tank from the vent piping systems during a tank test.

OPW 53 Bushings

OPW 53 Bushings are general-purpose bushings for use on tank-vent lines, fill lines, suction-lines or other lines where it is necessary or desirable to bush up or bush down.

Listings and Certifications

OPW 233 Series Extractor Fittings are EVR Approved for E85

OPW 53VML (30MV) Ball-Float Vent Valves

The OPW 53VML Ball-Float Vent Valves protrude into underground storage tanks from OPW 233 Series Extractor Fittings at the Stage I vapor-return riser pipe or tank-vent line. During a product delivery, as the tank level rises, a counterweight stainless-steel ball seats on the valve body and restricts flow of vapors back to the transport truck. As the vapors become compressed in the tank (ullage), product flow into the tank is severely restricted. The 53VML Series Ball-Float meets the U.S. EPA 90% requirement for product flow restriction into underground storage tanks. The 53VML-0060 and 53VML-0065 are designed as "back-up" overfill protection for overfill-prevention valves, and to minimize product mixing with underground manifold vent lines.

^{* 1/16&}quot; Vapor-Flow Orifice

30MV-KIT Ordering Specifications

Part #	Description
30MV-KIT	O-Ring 1/16" Brass orifice insert

Materials

Pipe Nipple: Steel
Coating: Black Duragard®
Basket: Stainless-steel
Ball: Stainless-steel

Features

- ◆ Stainless-Steel Counterweight

 Ball-Float corrosion-resistant

 for long service life. Counterweight
 ensures proper seating of the ball for
 precision "slow-down" of product flow
 into the tank
- Vapor-Flow Orifice a "bleed" hole machined into the body of the valve, sized to properly "slow-down" the delivery flow rate
- Duragard® Body Coating helps prevent rust and corrosion build-up for a smooth seating surface and long service life
- Various Body Lengths accommodate virtually any size tank
- ◆ 2" and 3" Body Sizes 3" size increases vapor flow to reduce product delivery time
- Easy Installation, Service and Testing – both 2" and 3" valves install in OPW 233 Series Extractor Fittings and are easily removed for inspection or tank testing with OPW 89 Extractor Wrench
- Compatible with 85% Ethanol (E85) or Methanol (M85)

Convert your 53VML into the 30MV Ball-Float

The 30MV Series ball-float has the same function as the 53VML, but allows for higher storage capacity in larger-volume tanks. The 30MV meets the U.S. EPA 30-minute warning requirement for product flow restriction in the underground storage tank. Using the Tank Ullage calculation on page 121, convert your desired length 53VML by adding the 30MV-KIT.

53VML 2"

53VML 3"

53VML/30MV Instruction Sheet Order Number: **H14111PA**

Warning OPW Overfill-Warning Systems should only be used on submerged pumping systems, not suction-pump systems. For special applications, contact OPW Fueling Components. OPW Overfill-Warning Systems should only be used on gravity-drop systems. DO NOT use where Pump-Off Unloading or coax fills are used.

Specifying the Proper Length 53VML or 30MV Series Ball-Float

Step 1: Determine Dimension "X": Consult the tank chart (provided by the tank manufacturer) to determine the distance that corresponds to 10% of the total tank capacity for 53VML or 308 gallons for 30MV.

Step 2: Determine Dimension "Y": Measure the dimension from the inside top of the tank to the top of the 4" threaded tank "bung" fitting.

Step 3: Add measurements "X" and "Y". Then subtract 1/4" and round up to the nearest length ball-float.

Tank Ullage Calculator

- ◆ 30 minutes x 5GPM = 150 gallons
- Ullage-compression rate* is 27% after the ball seats
- ◆ 150 gallons ÷ .73 (1- ullagecompression rate) = 205.48 gallons
- 205.48 x 1.5 (OPW recommended) safety factor) = 308.22 gallons
- Approximately 308 gallons required ullage

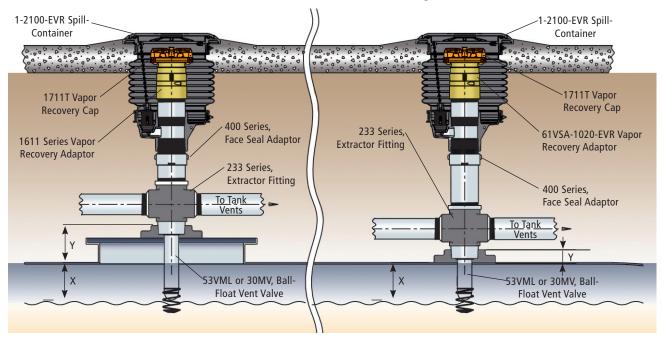

OPW 53VML and 30MV **Ball-Float Sizing/OPW 89 Extractor Wrench**

IMPORTANT:

Installing the incorrect-length OPW 53VML or 30MV Ball-Float Vent Valve for your specific application may result in delivery flow restriction at unacceptable levels. Always consult the appropriate tank charts and determine the specifics of your tank installation to determine the appropriate length OPW 53VML or 30MV. The illustration and instructions below are intended to serve as a guide in this determination.

OPW 89 Extractor Wrench

The OPW 89 Extractor Wrench is designed to install or remove OPW 53VML and 30MV Ball-Float Vent Valves or OPW 233VP and 233VMP Test Plugs in OPW 233, 233V, and 233VM Extractor Fittings. The 89 is also designed to work with the cage assemblies on the 233E Suction-Tube Extractor Fitting and 88E Extractable Angle Check Valve in suction-system applications. The 89 wrench consists of a 4" section of pipe welded to a "T" handle with a 2" hook section. The 2" hook section mates with current OPW ball-floats and extractable cages.

89-0044

^{*}Ullage-compression rate will vary with head pressure.

OPW 61T Drop Tube

The OPW 61T Drop Tube is installed in the fill riser pipe to an underground storage tank. It is designed to transfer product from the fill connection point (between the delivery drop elbow and tight-fill adaptor) to within 6" (or per local requirements) of the bottom of the tank. This allows for submerged filling of the tank, resulting in a more efficient delivery flow rate while reducing the buildup of vapors or foam in the tank.

OPW 61TC Coaxial Fill Drop Tubes

The OPW 61TC Coaxial Drop Tube is designed to replace an OPW 61T Conventional Drop Tube when Stage I Vapor Recovery is required and a vapor recovery riser pipe is not available on the tank or would require excavation to the top of the tank. The 61TC is used in conjunction with OPW 633TC Coaxial Vapor Recovery Adaptors to return vapors to the tank truck through one riser pipe during a fuel delivery to an underground storage tank. The upper section of the 61TC is tapered to allow vapors to return to the tank truck through the interstitial space between the riser pipe and outside wall of the drop tube. Simultaneously, product is delivered to the tank through the center of the 61TC.

OPW 61TCP Poppeted Coaxial Fill Drop Tubes

The OPW 61TCP Poppeted Coaxial Fill Drop Tube is similar to the 61TC, but is spring-loaded. When used in conjunction with the OPW 633TCP, the 61TCP acts as a poppet to close off the vapor-return side of the coaxial-fill tube.

Dron Tubo

 .062" Thick Drop Tube Walls – deter denting and damage to the tube upon installation or removal for long service life.

 Various Lengths and Diameters – accommodate a variety of tank diameters and fill riser pipe sizes.

OPW Tank-Bottom Protectors

OPW Tank-Bottom Protectors are installed at the bottom of overfill-prevention valves or drop tubes to help prevent the underground storage tank from damage or leakage at the fill point due to manual tank-gauging with wooden sticks and erosion from dirt or debris.

OPW 6111-1400 Tank-Bottom Protector

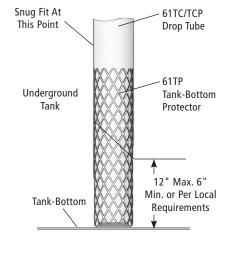

The OPW 6111-1400 incorporates a sliding bracket that is pop-riveted to the bottom of the drop tube. This secures the tank-bottom protector to the drop tube for easy, reliable installation and removal for servicing the tank.

Features

- Zinc-Plated Steel Cage ensures corrosion resistance for long service life
- Mesh Screen Design helps prevent debris or other foreign matter from obstructing the submersible pump or suction-line foot valve

OPW 61TP Tank-Bottom Protector

The OPW 61TP is a flanged, mesh screen design that slides to the bottom of the drop tube. The 61TP is held in place by the flanged spring action of the mesh screen. The mesh screen helps keep debris or other foreign matter from obstructing the submersible pump or suction-line foot valve.

6111-1400 Tank-Bottom Protector Instruction Sheet Order Number: **H14977PA**

OPW 723V Pressure Vacuum Vents

Pressure Vacuum Vents are installed on the top of vent pipes from underground or aboveground fuel-storage tanks. The vent-cap and internal wire screen are designed to protect the tank-vent lines against intrusion and blockage from water, debris or insects. A normally closed poppet in the valve opens at a predetermined pressure or vacuum setting to allow the tank to vent.

723V Vent Must Be

Features

- Preset and Tested Factory Settings - 2.5" to 6" water-column pressure settings and -6" to -10" watercolumn vacuum settings
- Cycle Tested For Reliability tested to the equivalent of 80 years of service in the most severe environment without leakage problems
- ◆ Long Service Life corrosionresistant Duratuff® composite construction
- Easy Installation the 723V is available in 2" and 3" threaded versions
- Certifications California Air Resources Board and Enhanced Vapor Recovery (CARB EVR)
- ◆ UL Approved to CARB CP-201 Requirements
- Underwriters Laboratory 2583 Listed
- Complies with NFPA 30 Requirements for venting gasoline vapors upward
- ◆ High Maximum Flow Rate 6450 SCFH at 2 psi (0.1 bar) pressure drop

- Manifold Vent Pipes vent pipes may be manifolded to produce a single Pressure Vacuum Vent line. The 723V exceeds California's requirements of a maximum vapor leak rate of 0.17 SCFH at 2.00 inches H_2O
- Leak Rate multiple pressure vacuum vents may be installed on a single site. The 723V exceeds California standards with a leak rate of 0.05 SCFH or less at 2.00 inches H_2O
- Screened Tank Vent Lines a 65-micron stainless-steel screen helps prevent debris and insects from entering the lines. An added screen installed at the base prevents debris from intruding from the vent stack
- ◆ No Tools Required A removable snap-fit top allows for easy maintenance (recommended yearly)
- Removable Threaded Bushing designed for easy installation on NPT-threaded risers. Allows easy access to lower screen

OPW 23 Series Open Atmospheric Vents

Open Atmospheric Vents are installed on the top of vent pipes from underground or aboveground fuel-storage tanks. The vent-cap and internal wire screen are designed to protect the tank-vent lines against intrusion and blockage from water, debris or insects. These vents are always open to atmosphere and allow any pressure or vacuum in the tank to vent.

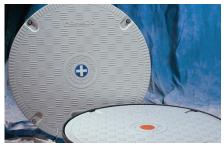

OPW 113 Series Open Atmospheric Utility Vents

OPW 113 Open Atmospheric Utility
Vents are installed on the top of above
ground fuel-storage tanks. The vent-cap
and internal wire screen are designed
to protect the tank-vent lines against
intrusion and blockage from water,
debris or insects. These vents are always
open to atmosphere and allow any
pressure or vacuum into the tank to
vent. The 113 vents vapors downward
and is used primarily on diesel, fuel oil,
waste-oil and motor-oil tanks,
but can also be used on a wide
variety of aboveground storage tankventing applications.

Manholes & Monitoring Well Equipment

OPW Manhole Covers Exceed Highway Specification-20 (H20/HS20)

Highway Specification-20 (H20/HS20) is contained in the "Standard Specifications for Highway Bridges" and is intended to serve as a standard or guide of preparation of state specifications.

H20/HS20 incorporates rear-axle loading of 32,000 lbs. over rear-axle (4 wheel on single axle) or wheel loading of 8,000 lbs. per tire.

These sketches illustrate the AASHTOapproved live-loading specifications for the standard H20 and HS20 trucks.

Fibrelite Composite Access Covers

Fibrelite manufactures the widest range of composite manhole covers for the Retail Fueling industry. After 30 years Fibrelite remains number one in the market, supplying globally innovative new designs.

Manholes & Monitoring Well Equipment

OPW Manholes are designed for use in a wide variety of service station, commercial and industrial driveway applications. They provide access from grade-level to underground equipment including tank sumps, tank riser pipes, monitoring equipment, submersible pumps, valves and piping connections.

Composite Manholes

Lightweight and extremely durable, composite cover manholes make sump accessibility safer and easier than ever before. Designed for use in many service station, commercial and industrial driveway applications, these manholes offer a wide variety of features to ensure the ultimate in safety, user-friendly convenience and long-lasting performance.

Cast-Iron Manholes and Fill Boxes

Heavily ribbed cast-iron covers and body rings ensure maximum load-bearing capacity on cast-iron manholes and fill boxes. These manholes are ideal for connecting underground tank lines directly to the surface without sump enclosures. A variety of features available on cast-iron manholes and fill boxes make them the perfect choice for many applications.

Steel Manholes

Steel Manholes are designed for use in a variety of service station driveway, industrial and commercial applications, and are used to provide access to all types of underground equipment, including vapor recovery connections, UST monitoring equipment, submersible pumps and tank-gauging equipment.

Monitoring Well Manholes

OPW Monitoring Well Manholes are designed for monitoring and observation well applications where limited access and clear identification are essential. Rugged castiron covers meet H20/HS20 load rating requirements for long-lasting and reliable performance. The covers feature a permanently cast-in "Do Not Fill" warning statement and a black equilateral triangle inset into a white background in accordance with API Recommended Practice 1615.

Fibrelite Composite Manholes

Fibrelite offers the retail-petroleum industry's leading watertight, easy to remove, non-bolted composite manhole covers in a large selection of shapes and sizes. From general tank sump access to multiport and single-port fill-sump applications to interstitial sumps and monitoring-wells, Fibrelite has every application covered.

Multiple colors are available – Contact OPW Customer Service for pricing, availability, and lead times.

Materials:

Cover: Fiberglass Frame: Fiberglass Skirt: Fiberglass Cover Includes Frame and Skirt

Features & Benefits:

- UV resistant
- Round, square and rectangular (wide range of sizes)
- Anti-slip surface no costly injury claims
- Will not corrode
- Watertight, sealed design
- No bolts required
- Monolithic structure eliminates delaminating

- Ergonomic, single-person removal and replacement with Fibrelite lifting handle
- Locks available for all covers
- Available in any color
- Heavy-duty (HD40) covers available for truck stops, bus depots and industrial applications

OPW Conquistador™ Plus Composite Cover Manholes

Lightweight and extremely durable, composite cover manholes make sump accessibility safer and easier than ever before. Designed for use in many service station, commercial and industrial driveway applications, these manholes offer a wide variety of features to ensure the ultimate in user-friendly convenience and long-lasting performance.

The Conquistador™ Duratuff® helps put an end to the risk of back, foot and hand injuries with a slip-resistant tread pattern and lightweight, low-profile construction for easier and safer access to tank sumps and other underground equipment.

Gain independence from heavy steel covers with this all-new composite cover. OPW engineered the Matador with next-generation composite technology to make it the lightest cover in the industry, and priced it to compete with any cover on the market for use at petroleum retail operations, in addition to use for commercial and industrial driveway applications.

Available in 37" and 42" options, the Matador Composite Cover is lightweight, water resistant and extremely durable. Standout features include a steel frame, stainless-steel recessed lift handle and a polyethylene skirt with a flair that prevents corrosion and rust. The lightweight design and slip-resistant tread pattern helps to prevent the risk of back, foot and hand injuries. The Matador makes sump accessibility safer and easier than ever before.

Performance Chart

Materials

Cover: Fiberglass **Ring:** Painted Steel **Skirt:** Polyethelene

Recessed Handle: Stainless-steel

Roto Locks: Ductile iron

Features & Benefits

- Lightweight design helps to reduce risk of back, foot and hand injuries
- Slip-resistant tread pattern
- Water resistant
- Easy removal and replacement
- Stainless-steel recessed handle
- Exceptional deflection performance
- Long-life performance comparable to heavier competitor models in cycle tests
- Special structural fiberglass reinforcement matrix

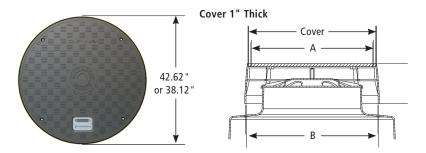

- Two mounting options
- Roto-Lock Option for providing a secure locking mechanism without the need to locate threaded bolt holes on the mounting ring. The Roto-Lock offers quick and easy access while maintaining a secure sump application.
- Painted steel frame
- ◆ Polyethylene skirt with flair
- H20/HS20 Rating Exceeds Highway Specification – 20 (H20/HS20) Rating
- Flared skirt allows equivalent water percolation to 39" and 44" covers

OPW 104C Composite Cover Manholes

The OPW 104C 20" (500mm)
Composite Cover Manholes allow easy access to UST-monitoring equipment and provide additional space for electrical junction boxes.

Features

- Lightweight Cover provides safe, easy removal and replacement
- Durable Composite Construction

 never rusts, fades or needs to be painted
- Spark-Free Cover Design fiberglass construction eliminates the possibility of sparks caused by replacing cover on mounting ring
- Flush-Mount, Rolled Steel
 Mounting Ring eliminates the
 need for sloping concrete to reduce
 snow-plow and traffic hazards
- Highway 20 Rated (H20/HS20)
 all OPW spill-containers and manholes exceed the requirements of the Highway 20 rating

Typical Underground Storage Tank Manhole Layout

104AOW-1200 Monitoring/ Observation Well Manhole

Materials

Body Ring: Cast iron **Cover:** Cast iron **Skirt:** Galvanized steel

OPW 104A Cast-Iron Manhole

A sturdy steel skirt on the standard 104A extends nearly a foot below grade to ensure trouble-free installation in deep concrete, and optional skirts that extend a full 19-1/4" below grade are available in 12" and 18" diameters for sandy-soil locations.

OPW 104FG Cast-Iron Manhole

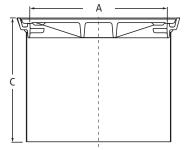

The 104FG provides a convenient fingergrip feature on the cover to facilitate cover removal.

Features

- Full-size internal diameters for maximum access and working area
- Highway 20 Rated (H20/HS20) All OPW spill-containers and manholes exceed the requirements of the Highway 20 rating
- Rugged cast-iron covers and body rings
- Cast-in, non-skid finish on covers
- Sturdy, extra-long steel skirts
- Individually boxed for ease of handling

OPW 104 Series Cast-Iron Manholes

Heavily ribbed cast-iron covers and body rings ensure maximum load-bearing capacity on cast-iron manholes and fill boxes. These manholes are ideal for connecting underground tank lines directly to the surface without sump enclosures. A variety of features available on cast-iron manholes and fill boxes make them the perfect choice for many applications.

^{*} Recessed Handle

Standard - Plain No Bolts Rain-tight - Bolt Down Deep skirts available upon request

^{**} Reinforced Cover

Materials:

Cover: Fiberglass Frame: Fiberglass Skirt: Fiberglass Cover Includes Frame and Skirt

Features & Benefits:

- UV resistant
- Round, square and rectangular (wide range of sizes)
- Anti-slip surface no costly injury claims
- ◆ Will not corrode
- Watertight, sealed design
- No bolts required
- Ergonomic, single-person removal and replacement with Fibrelite lifting handle

Fibrelite Composite Monitoring Manholes

Fibrelite offers the retail-petroleum industry's leading watertight, easy to remove, non-bolted composite manhole covers in a large selection of shapes and sizes. From general tank-sump access to multiport and single-port fill-sump applications to interstitial sumps and monitoring-wells, Fibrelite has every application covered.

Multiple colors are available – Contact OPW Customer Service for pricing, availability, and lead times.

OPW CARB-Certified 14E ECO Enhanced Conventional Gasoline Nozzle

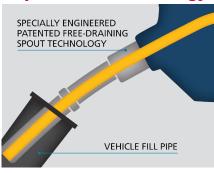

The OPW 14F FCO Enhanced Conventional Gasoline Nozzle is part of the new OPW 14 Series cleaner fueling experience nozzles, featuring innovative patented* dripless free-draining spout technology. Other dripless technologies capture fuel in the spout where it is allowed to evaporate and increase VOC emissions.

The new OPW 14E dripless-spout technology is designed to keep gasoline from dripping on your customers' hands, clothing, vehicles and the ground to provide a cleaner, greener, and more satisfying customer experience.

The CARB ECO OPW 14E utilizes a special interlock system inside the bellows to activate the flow of fuel.

CARB exec order in Listings and Certifications section of this catalog.

Dripless Nozzle Technology

FEATURE IS ACTIVATED

MATERIALS

Body: Aluminum Lever & Lever Guard: Duratuff® Packing: Graphite with Teflon® Disc: Viton® **Spout:** Aluminum with Stainless-Steel tip and Teflon®-coated inside Inlet Size: 3/4" NPT Certified Weight: 2.73 lbs. each The 14E is designed with an interlock 1.25 kg each to meet CARB requirements for dripless nozzles.

FEATURES & BENEFITS

Safe for Use

- True Dripless Technology* patented dripless, free-draining spout with no dams or hidden reservoirs to catch liquid. Designed to exceed CARB dripless requirements.
- Rugged Durability designed to meet the rigorous demands of high-volume sites.
- FlowLock™ allows nozzle to shut off when falling out of a vehicle or is tipped up, limiting spillage and unsafe conditions.
- Enhanced Drip Control (14E Models only) - specially designed interlock prevents fuel from flowing unless the spout is fully inserted in the vehicle fill pipe and the actuator is engaged. This is a CARB requirement.

Durable and Long-Lasting Design

 Cycle tested and proven to last longer than 1 million cycles.

 Durable lever guard that won't scratch vour customers' vehicles - made from Duratuff®.

Cleaner Fueling Experience for Customers

- Easy to use utilizing Accu-Stop® to-the-penny Flow Control Technology.
- Attractive two-piece hand-insulator which includes NEWGARD™ barrel cover and colored scuff guard, is the most comfortable nozzle in the industry to use.
- Convenient one-finger hold-open clip that is easy to set the flow rate.

Design Working Pressure

50 psi (3.45 bar) maximum pressure.

OPW 14C Diesel-Capture Technology Nozzle

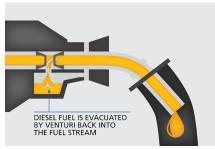

The OPW 14C is part of the new OPW 14 Series cleaner fueling experience nozzles, featuring innovative patented* diesel-capture technology. This innovation is designed to provide a cleaner, greener fueling experience for customers while keeping diesel fuel off their hands and off the ground.

Diesel-Capture Technology

MATERIALS

Body: Aluminum

Lever & Lever Guard: Duratuff®

Packing: Graphite with Teflon®

Disc: Viton®

Spout: Aluminum

Inlet Size: 3/4" NPT

Weight: 2.73 lbs. each

1.25 kg each

FEATURES & BENEFITS

Safe for Use

- Diesel-Capture Technology* the patented technology allows excess diesel fuel to drain into a uniquely engineered chamber located in the body of the nozzle located at the base of the spout. This excess diesel fuel is then introduced back into the fuel stream.
- Drip Guard designed to capture any fuel that runs out onto the outside of the nozzle.
- Compatible for diesel-fuel blends up to B20.
- Rugged Durability designed to meet the rigorous demands of high-volume sites.
- ◆ FlowLock™ allows nozzle to shut off when falling out of a vehicle or is tipped up, limiting spillage and unsafe conditions.

Durable and Long-Lasting Design

 Cycle tested and proven to last longer than 1 million cycles. Durable lever guard that won't scratch your customers' vehicles
 made from Duratuff®.

OPW Factory-Assembled Hose Kits

Factory-assembled OPW Hose Kits include all components from the whip hose to the nozzle. Each connection is tested for pressure tightness and continuity. Customize your hose kits by choosing from a variety of nozzles, swivels, breakaways and hoses. By selecting an OPW Hose Kit, you'll save time and money as opposed to purchasing and installing each item separately.

Features

- Quick and easy installation
- Save costs vs. purchasing items separately
- Reduce downtime
- Quality components
- Customizable
- Various renewable fuels, biodiesel, ethanol blends available
- Each hose kit is tested

Unleaded and Diesel Packages Include

A Nozzles (Standard colors available)

11BP	3/4" Unleaded, No Pressure - No Flow
14E	3/4" Unleaded, CARB-Approved, Dripless
14BP	3/4" Unleaded, Automatic Dripless
11B	3/4" Leaded/Diesel, Automatic Standard
14C	3/4" Auto-Diesel, Diesel Capture Technology
7HB	1" High-Flow Diesel, No Pressure - No Flow
14HC	1" High-Flow Diesel, Diesel Capture Technology

B Swivels

Body: Aluminum

Lever & Lever Guard: Duratuff®

Packing: Graphite with Teflon®

Disc: Viton®

Spouts: Aluminum
Inlet Size: 3/4" NPT

Weight: 2.85 lbs. each, 44.90 lbs./case of 15

1.3kg each, 20.4kg/case of 15

Features

- The new and improved farm hanger is now made from stamped metal and bolted to the nozzle, making it stronger and sturdier than ever.
- UL- and ULc-Listed for use in gasoline, diesel and up to 10% ethanol blends.
 Specific listings available at www.opwglobal.com.
- New bleeder poppet orifices allow for use in transfer pumps with or without air-elimination systems.
- Prevents consumer from jamming the nozzle in an open position – blocker on lever guard.

- Durable lever guard that won't scratch your customers' vehicles – made from Duratuff®.
- Easy to use utilizing Accu-Stop® to-the-penny Flow Control Technology.
- Works with self-priming and non-selfpriming pumps.

Design working pressure

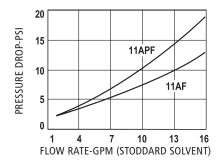

◆ 50 psi (3.45 bar) maximum pressure.

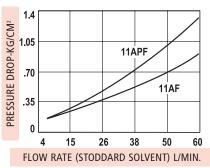

OPW 11AF® 3/4" Automatic Nozzles

The OPW 11AF® Nozzle is a sturdy industry-proven standard used primarily for fueling up to 15 gallons per minute. The 11AF® is an automatic dispensing nozzle designed for use in transfer pump. This nozzle should not be used for retail applications, and does not include a No-Pressure - No-Flow or Interlock Device.

△ WARNING

Do not use OPW 11AF Nozzles for any retail application. It is only intended for use in non-retail applications. Use of foreign objects to hold open automatic nozzles could result in failure to shut off and personal injury.

FIRST to Meet NEW UL-2586 Requirements e of 15 f 15 7H® 7HB®

Features

Safe for Use

- UL- and ULc-Listed for use in gasoline, diesel and up to 10% ethanol blends.
 Specific listings available at www.opwglobal.com.
- Prevents gasoline spills in prepay or card-lock systems utilizing OPW's unique No-Pressure - No-Flow Device. The nozzle cannot be opened until the pumping system is pressurized, and closes automatically when the pressure is removed. (7HB Series only)
- Prevents consumer from jamming the nozzle in an open position – blocker on lever guard.
- FlowLock™ allows nozzle to shut off when falling out of a fill pipe, and is tipped up, limiting spillage and unsafe conditions.
- Reliably low shut off specifically designed to ensure proper automatic shut off as low as 5 gallons per minute.

Durable and Long Lasting Design

 Cycle-tested and proven to last longer than 1 million cycles – better than any other nozzle available on the market today.*

- Durable lever guard that won't scratch your customers' vehicles – made from Duratuff®.
- New hold-open clip spring lasts longer than previous designs.

Appealing to Customers

- Easy to use utilizing Accu-Stop® to-the-penny Flow Control Technology.
- Easy to open, even at high pressures, utilizing Dual Poppets.
- Even, smooth spray pattern minimizes diesel foaming and false shut offs.
- Smooth closing action and reduced line shock from incorporated dashpot technology.
- Convenient one-finger hold-open clip that is easy to set the flow rate. (not on all models)
- Spout Retaining Ring adds extra measure in securing nozzle spout in fill pipe where required. (not on all models)

Design working pressure

- ◆ 50 psi (3.45 bar) maximum pressure.
- * OPW internal lab-testing results as of August 2010.

Listings and Certifications

See pages 168 - 174 for certification number

△ WARNING

In order to be UL-2586 approved effective April 30, 2015, the use of a Hold-Open device is only permitted on dispensing nozzles equipped with a "B-Cap" (no-pressure - no-flow) or interlock feature. The use of foreign objects to hold open automatic nozzles could result in shut off failure and personal injury.

(adaptor required for each nozzle)

Weight:

2.41 lbs. each, 36 lbs./case of 15 1.1 kg each, 16.5 kg/case of 15

Features - Benefits

- Automatic Shutoff Feature shuts off nozzle when the tank is full
- Mis-filling prevention device eliminates the risk of accidental DEF filling or environmental contamination.
- Spout with magnetic interface prevents mis-filling mishaps.
- Durable streamlined nozzle design for easy, comfortable nozzle handling makes it easy to differentiate DEF products.
- Total end-to-end affordable solution is a convenient and complete system from the Industry Leader.

- Comes with Integral Contaminant-Prevention Filter; this replaceable, stainless-steel, 40-mesh filter provides an added level of protection against DEF contaminants.
- Outfitted in that familiar and unmistakable "DEF Blue" with slogan badge for instant product identification.

21GU-FLTR

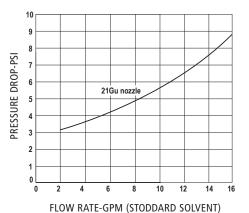

Maximum pressure and flow rate

- 40 psi (2.75 bar) maximum pressure.
- ◆ 10 gpm (37.8 lpm) maximum flow rate

OPW 21Gu™ DEF Nozzle

The Industry's Most Comprehensive DEF-Filling Solution

- End-to-end dispensing hardware solution for reliable, efficient DEF-filling
- Industry standard DEF-filling solution in Europe
- Unique Mis-Filling Prevention Device (MFPD) provides unparalleled filling assurance and peace of mind
- Affordable mis-filling prevention insurance designed to protect your investment against potential mis-filling mishaps

Are You Protected?

A fixed magnetic field within the Mis-Filling Prevention Device actuates a magnetic interface in the spout of the 21Gu nozzle to allow the flow of DEF. Without the Mis-Filling Prevention Device, the DEF nozzle will not flow. Put the nozzle in the wrong tank – say, your diesel tank – no problem, the nozzle will not flow. No other DEF-filling nozzle has this DEF mis-filling protection capability.

OPW 45 Hose Swivel

The OPW 45 swivel is designed for gasoline self-service applications where easy nozzle and hose handling is important for customer convenience. The 45 is installed between the nozzle and hose to reduce strain, providing flexibility so fueling hoses last longer.

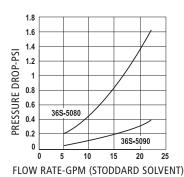

OPW 36S Hose Swivel

Designed for use with fuel-oil nozzles (at inlet only), the OPW 36S provides 360° swivel action. The full-circle swivel reduces the physical strain of aligning the nozzle with the fill pipe.

OPW 241TPS Series Hose Swivels

The OPW 241TPS Series of swivels are designed and rigorously tested for applications where easy nozzle and hose handling is important for customer convenience. Swivels are installed in between the nozzle and the hose to provide flexibility in the system to reduce customer strain, position the nozzle properly and reduce premature hose wear.

Materials

Features

- UL and ULc-listed for use in gasoline, diesel, and up to 10% ethanol blends. Specific listings available at www.opwglobal.com.
- Allows for easy nozzle positioning in fill pipes - utilizing two planes of rotation.
- Reduces premature hose wear utilizing two planes of rotation.
- Added protection vs. thermal and chemical degradation - Dual Seals.
- 50 psi (3.45 bar) maximum pressure.

OPW 66SB Swivel Breakaway

The OPW 66SB Swivel Breakaway is intended for easy installation at the nozzle inlet. The compact, lightweight design incorporates a 360° swivel rotation at both the male end and middle joint, with a simple and easily reconnectable breakaway on the opposite end.

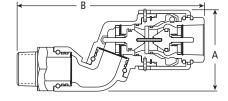

Features

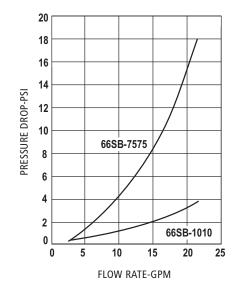

- UL and ULc-listed for use in gasoline, diesel and up to 10% ethanol blends.
 Specific listings available at www.opwglobal.com.
- Pull Force the 66SB will break away with a pull force of no more than 350 lbs.
- Easily Reconnected at Waist Height after relieving line pressure, simply push coupling halves together until latched. Reconnection force is approximately 15 lbs.
- Protected Coupling and Poppet the breakaway's poppet and sealing surface are protected from impact during separation by a plastic sleeve.

- Reduces Connections the singleunit design replaces the standard swivel, breakaway and whip hose, eliminating possible leak points.
- Double O-Ring Seal both swivel joints are protected by a double O-Ring design.

Design working pressure

◆ 50 psi (3.45 bar) maximum pressure.

OPW 68EZR Series 3/4" and 1" Dry-Reconnectable Breakaway

The OPW 68EZR Recconnectable Breakaway has been designed for retail-fueling operations to deliver an increased level of security in the event of a drive off. Not only is it the fastest and easiest breakaway in the industry to reconnect, but also the one that delivers the greatest peace of mind that it is securely reconnected. Built on the 66REC breakaway technology platform, the 68EZR delivers trusted OPW quality and proven technology at the lowest cost of ownership. The 68EZR is installed on fuel-dispensing hoses and will separate when subjected to a designated pull force. Upon separation, the dual valves seat automatically, stopping the flow of fuel and limiting any fuel spillage, while protecting the dispensing equipment. For proper operation on high-hanging hoses, the OPW 68EZR must always be installed with a "straightening" hose, such as the OPW 66H. For low-hose applications, the OPW 68EZR should be installed downstream of the retractor cable.

Materials

OPW 66REC 3/4" Dry-Reconnectable Breakaway

The OPW 66REC is the first dryreconnectable breakaway for the conventional dispensing market. It is designed to be installed on fueldispensing hoses and will separate when subjected to a designated pull force. The dual valves seat automatically, stopping the flow of fuel and limiting any fuel spillage, while protecting the dispensing equipment. When reconnecting the separated halves, the 66REC seals tightly on an O-ring before the poppet stems engage to open the valve. For proper operation on high-hanging hoses, the OPW 66REC 3/4" must always be installed with a "straightening" hose with a minimum length of 9", such as the OPW 66H. For low-hose applications, the OPW 66REC should be installed downstream of the retractor cable.

OPW 66V Series Breakaways

The OPW 66V Series Breakaways are designed and rigorously tested for use in today's fuels. Installed on fuel-dispensing hoses, they will separate at the designed pull force, reducing expensive damage to the dispenser and piping system. Internal dual valves close automatically during separation, stopping the flow of fuel from both the dispenser and the separated hose, reducing environmental and health risks of potential spilled fuel.

OPW 44 Flow Limiters

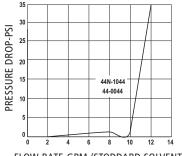

The OPW 44 Flow Limiters allow your customers to comply with the EPA's 10-gallon maximum flow-rate mandate which went into effect July 1, 1996. The OPW 44-0044 Flow Limiter is designed to control the maximum fuel flow rate to 10 gpm.

Features

- UL and ULc-listed for use in gasoline, diesel and up to 10% ethanol blends.
 Specific listings available at www.opwglobal.com.
- Compact, attractive profile for a sleek, modern appearance.
- ◆ Includes a ¾" NPT pipe nipple.
- The OPW 44-0044 is designed to be installed at the dispenser outlet or between the dispenser and the
- breakaway valve, thus removing it from the abusive action sometimes seen at the nozzle.
- A flow-indication arrow is indicated on the flow limiter for easy installation.

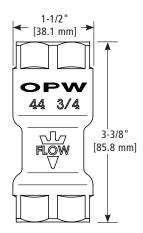

Design working pressure

◆ 50 psi (3.45 bar) maximum pressure.

Features

Safe for Use

- UL-listed for use in gasoline, diesel and up to 10% ethanol blends.
 Specific listings available at www.opwglobal.com.
- Prevents gasoline spills in prepay or card-lock systems utilizing OPW's unique No-Pressure - No-Flow Device.
 - The nozzle cannot be opened until the pumping system is pressurized and closes automatically when the pressure is removed.
- Prevents consumer from jamming the nozzle in an open position – blocker on lever guard.
- Vapor Escape Guard (VEG) improves vapor collection.
- Lever-activated vapor valve only opens when product is flowing controlling the amount of vapors collected from the vehicle.

Durable and Long Lasting

 Cycle tested and proven to last longer than 1 million cycles – better than any other nozzle available on the market today*.

- Stainless-steel insert in spout to last longer than standard aluminum-only spouts.
- Durable lever guard that won't scratch your customers' vehicles – made from Duratuff®.
- New hold-open clip spring lasts longer then previous designs.
- Internal vapor path no replacement parts needed.

Appealing to Customers

- Easy to use utilizing Accu-Stop® to-the-penny Flow Control Technology.
- Attractive 2-Piece NEWGARD™ Hand Insulator is the most comfortable nozzle in the industry to use.
- Convenient one-finger hold-open clip that is easy to set the flow rate (not on all models).

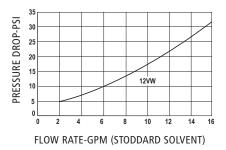

Design working pressure

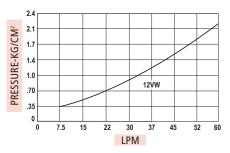

- ◆ 50 psi (3.45 bar) maximum pressure.
- * OPW internal lab-testing results as of August 2010.

OPW 12VW Vacuum-Assist Nozzles

The OPW 12VW Series automatic nozzles are one of OPW's premium nozzles for Vacuum-Assist vapor recovery systems. Designed with an integrated vapor valve, they are certified on the most used vapor recovery systems in the world. The 12VW is the most trusted vapor recovery nozzle in the world for the applications it is certified on including:

- Dresser/Wayne Wayne® Vac
- Gilbarco® VaporVac®
- Schlumberger
- Vacurite

^{**}Approval for 350ml liquid-retention requirement.

Body: Aluminum

Outlet Adaptor: Aluminum Inlet Adaptor: Aluminum Seals: Viton® and Buna-N Weight: 1.5 lbs. each, 0.68 kg

Features

- UL-listed for use in gasoline, diesel and up to 10% ethanol blends.
 Specific listings available at www.opwglobal.com.
- Easier Hose Movement filling the vehicle is much easier, because hoses do not kink and are much freer to move.
- Improved Wear reduces stress and wear on hoses.
- Two-Plane Rotation the first swivel plane allows for 360° of motion perpendicular to the axis of the nozzle.
- The second swivel plane allows for 360° of motion parallel to the axis of the nozzle for easy nozzle positioning in the fill pipe.

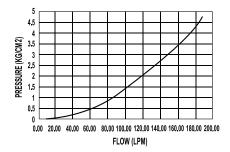

- Compact, Attractive Profile –
 provides a sleek, modern appearance,
 allowing hoses to hang straight down
 instead of at an angle.
- Secure Design not repairable or rebuildable for certainty of operation. Every MFVA is factory assembled and tested.
- Special Swivel Outlet Design –
 male adaptor is specially designed so
 that tightening of the threaded joint
 will not inhibit swivel rotation.

Design working pressure

◆ 50 psi (3.45 bar) maximum pressure.

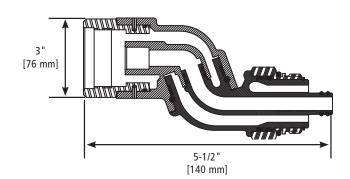

OPW MFVA Inverted Swivel

The OPW MFVA Inverted Swivel is designed for vapor recovery applications where easy nozzle and hose handling are important for customer convenience. When attached between the nozzle and the hose, the OPW MFVA two-plane swivel allows your customer a much fuller range of motion in positioning the nozzle to fill the vehicle. Your customer can access the fill pipe from virtually any angle with minimal effort. The OPW MFVA attaches between the hose and the nozzle to reduce strain, providing flexibility so fueling hoses last longer. The OPW MFVA provides 360° swivel action for easy nozzle positioning into the fill pipe.

- Sleek, Attractive Appearance to enhance station image.
- Quick Reconnect requires only 15 lbs. of force to reconnect.
- Dry-Reconnect designed to help prevent liquid from spraying the operator during the reconnection operation.
- Rugged, Durable Construction outer sleeve to protect coupling and sealing parts from damage for long, trouble-free service life.

Nozzle and Hose Compatibility

 interfaces with Stage II vapor recovery nozzles by OPW, and with all manufacturers of vapor recovery hoses (features the popular M34 metric thread).

Construction/Design

- Outer sleeve to protect sealing and coupling parts in a drive-away.
- Field-proven, double-poppet design that seals both ends of the product line and the dispenser side of the vapor line in a drive-away.
- Inverted metric coaxial hose fitting for installation into any vacuum-assist dispenser.
- Easily replaces any inverted breakaway currently in use today.

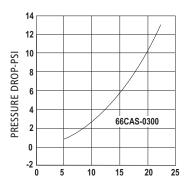

Design working pressure

◆ 50 psi (3.45 bar) maximum pressure.

Inverted Breakaways The OPW 66CAS Dual Perpeted Dry

OPW 66CAS Dry-Reconnect

The OPW 66CAS Dual-Poppeted, Dry-Reconnect Inverted Breakaway is designed to close off the liquid path and the vapor path in the event of a drive-away. Engineered to separate at a maximum of 300 pounds of axial pull force, the OPW 66CAS Breakaway is also designed to handle line shock better then a single-use breakaway, while protecting your dispensing system from catastrophic damage. The OPW 66CAS is developed for use with inverted coaxial metric hoses and designed to meet today's demanding standards.

OPW 19DEF Series Industrial Automatic Nozzle

When you're responsible for ensuring the safe, reliable and affordable dispensing of Diesel Exhaust Fluid (DEF) for on-road, off-road, commercial and industrial heavy-duty trucks, farming or other diesel-powered vehicles, you rely on the most trusted name in dispensing nozzles — OPW.

The NEW OPW 19DEF Series Industrial Automatic Nozzle is specifically designed for your commercial and industrial fleet operations, offering unmatched reliability with the features you want.

OPW 19DEF Series Swivels

Reconnectable Swivel Breakaway

- Designed to connect to the inlet of the nozzle. - No whip hose needed
- The industry's best swiveling ability
- Breakaway is reconnectable with built in swivel; retaining jaws and seals are replaceable
- Breakaway will separate at no more than 350 pounds of force. (axial or angular)

 The industry's best swiveling ability

Design Working Pressure

 50 PSI (3.45 bar) maximum pressure

NOTE: The OPW 19DEF Equipment is for commercial-fleet applications only and is not UL-listed for gasoline-dispensing facilities.

Materials

Packing & Disc: Fluorocarbon Lever & Lever Guard: Duratuff®

Spout: Stainless-Steel

O.D. 19mm (0.75 in) per ISO 22241

Specifications

Inlet Size: 3/4" NPT or 3/4" BSPP Weight: 2.73 lbs. each, 43.1 lbs./case

> of 15, 1.25 kg each, 19.9 kg/case of 15

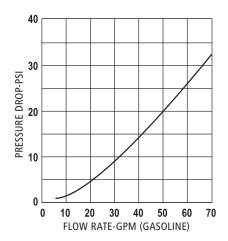

Features - Benefits

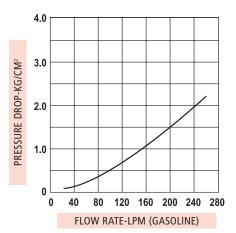

- Stainless-Steel Spout provides optimum DEF purity and prevents corrosion
- Lowest Overall Cost of Ownership reliable, long-lasting design based on proven OPW quality platform and industry standard-setting technology
- Ease of Use sleek, lightweight design with patented Accu-Stop® Flow Control Technology and convenient one-finger hold-open clip to set flow rate
- User Comfort attractive 2-Piece NEWGARD™ Hand Insulator is the most comfortable nozzle in the industry in hot or cold weather
- Vehicle Protection our Duratuff® lever guard not only provides for rugged durability when dropped but also won't scratch your fleet vehicle
- Meets ISO 22241 Requirements all materials of construction are 100% third-party tested and approved for DEF compatibility

OPW 1291C Automatic Shut-Off Nozzles

For Heavy-Duty, High-Flow Truck, Bus and Home Fuel Oil Delivery Service

Materials

Body: Aluminum

Main stem: Stainless-steel

Packing: Graphite with Teflon®

Main Disc: Viton®
Inlet Size: 1-1/2" NPT

Features

- Venturi-Type Shut-Off Mechanism for automatic shut off.
- Aluminum Body lighter in weight and easier to maneuver than other nozzles on the market.
- Two-position hold-open device*.
- One-Hand Control of Hold-Open Mechanism – means easy setting of flow rate.
- Right-Angle Design provides larger lever area for better grips and easier control, permitting the nozzle to fit into awkward spaces close to walls and into corners.

- Easy Spout Replacement simply remove the spout's retainer nut.
- Built-In Outlet Check Valve meets all known requirements of the Division of Measurement Standards.
- Dual Poppets make nozzle easy to open against high inlet pressure.

Design working pressure

- ◆ 50 psi (3.45 bar) maximum pressure.
- Service Temperature range:
 -20° F to 140° F (-29°C to 60°C)

Body: Cast aluminum

Main Stem: Stainless-steel

Stem Seal: Buna-N O-Ring

Disc: Viton®

Spout: Aluminum

Features

- Aluminum Body lighter weight, easier to maneuver.
- Dual Poppets easy-to-open nozzle against high inlet pressures.
- Color-Coded Composite Lever Guards – helps distinguish between AVGAS and Jet A. Easily replaced in lever-guard kit.
- Right-Angle Design provides larger lever area for better grip and easier control.
- Vinyl-Coated Lever insulates fingers against cold.
- 100-Mesh Strainer prevents foreign matter from entering fuel tank; easy to remove and clean.
- Dust Cap keeps spout free from dirt and stops fuel drippage when connected.
- Adjustable Dash Pot permits adjusting the main poppet closure rate over a wide range of flows to overcome line shock with minimum afterflow.

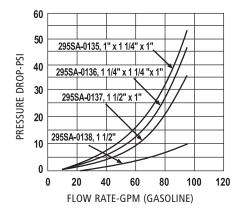

- Easy Spout Replacement the spout is easily threaded into the body. Replacement spouts are readily available from OPW.
- Built-In Swivel eliminates twisting and kinking of the hose. This swivel is electroless nickel-plated and has full-bearing surfaces.
- NPT Female Threads at Inlet End of 295SA – accepts all 1", 1-1/4" or 1-1/2" male connections.
- NPT Female Threads At Inlet End Of 295SAJ – accepts all 1-1/2" male connections.
- Unique Jet Aircraft Spout Design of 295SAJ – to help prevent inadvertent fueling of piston-engine aircraft with turbine fuel.
- Ground-Wire Assembly included on all aviation nozzles.

Materials

Body: Cast aluminum
Main Stem: Stainless-steel
Stem Seal: Buna-N O-Ring
Main Poppet Disc: Viton®
Spout: 297AF-9070

Features

- Aluminum Body lighter weight, easier to maneuver.
- Dual Poppets easy-to-open nozzle against high inlet pressures.
- Replaceable Lever Guard easy, low-cost replacement.
- Right-Angle Design provides larger lever area for better grip and easier control.
- Vinyl-Coated Lever insulates fingers against cold.
- 100-Mesh Strainer prevents foreign matter from entering fuel tank; easy to remove and clean.
- Dust Cap keeps spout free from dirt and stops fuel drippage when connected.

- Spout-Protector Ring to protect aircraft tanks and wing surface; adjustable. Furnished as standard.
- Special Heavy-Duty Spout knurled to facilitate daily strainer service.
- NPT Female Threads at Inlet End standard pipe threads all 1-1/2 " male connections.
- Static Ground Wire with air-force plug meets MS 25384-5.
- Dash-Pot Action for smoother closing action and reduced line shock.

OPW 190 High-Flow Manual Nozzles

For High-Flow, Bulk Fuel Oil Delivery Service

Designed to handle high flow when line pressure is not a critical consideration or otherwise absorbed.

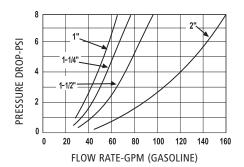

Features

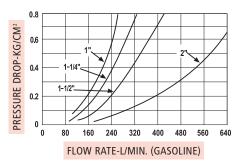

- Aluminum Body lighter weight, easier to maneuver.
- Dual Poppets allow for low-flow metering (this nozzle is not intended for high-pressure pump applications).
- Replaceable Hold-Open Rack for use when fueling large-capacity tanks. Nozzle must be attended at all times during usage.
- Right-Angle Design provides larger lever area for better grip and easier control; permits nozzle to fit into awkward spaces close to walls and into corners.

- Drag Lugs protect the nozzle when dragged across rough surfaces; enhances long-life durability.
- Easy Spout Replacement the spout is easily threaded into the body.
 Replacement spouts are readily available from OPW.
- NPT Female Threads at Inlet End standard pipe threads accept all standard 1", 1-1/4", 1-1/2" and 2" male connections.

Design working pressure

◆ 50 psi (3.45 bar) maximum pressure

Body: Cast aluminum

Main Stem: Stainless-steel Stem Seal: Buna-N O-Ring Main Poppet Disc: Viton® Spout: OPW 297 aluminum

(optional)

295SC-0141 (Spout optional, see Page 190)

Features

- Aluminum Body lighter weight, easier to maneuver.
- Dual Poppets easy-to-open nozzle against high inlet pressures.
- Replacement Hold-Open Rack –
 one-hand control of hold-open
 mechanism means easy setting
 of flow speed. Nozzle must be
 attended at all times during usage.
- Replaceable Composite Lever Guard
 easy, low-cost replacement.
- Right-Angle Design provides larger lever area for better grip and easier control; permits nozzle to fit into awkward spaces close to walls and into corners.
- Adjustable Dash Pot permits adjusting the main poppet closure rate over a wide range of flows to overcome line shock with minimum afterflow.

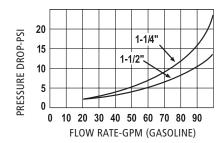

- Built-In Swivel eliminates twisting and kinking of the hose. This swivel is hard-coated aluminum and has full-bearing surfaces.
- Built-In Check Valve prevents hose drainage after pump is turned off.
- Vinyl-Coated Lever insulates fingers against cold.
- Easy Spout Replacement the spout is easily threaded into the body. Replacement spouts are readily available from OPW.
- NPT Female Threads at Inlet End
 standard pipe threads accept all
 1-1/4" or 1-1/2" male connections.

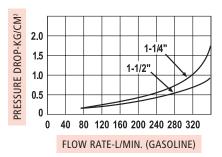

Design working pressure

110 psi (7.58 bar) maximum pressure

Body: Cast aluminum

Main Stem: Stainless-steel

Stem Seal: Graphite with Teflon®

Disc: Viton®

Spout: OPW 296 brass or

297 alum. (optional)

210-0105 (Spout optional, see Page 190)

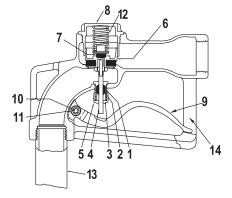

Features

- Aluminum Body lighter weight, easier to maneuver.
- Dual Poppets allows for low-flow metering.
- Replaceable Hold-Open Rack for use when fueling large-capacity tanks. Nozzle must be attended at all times during usage.
- Dash Pot non-adjustable, to minimize closing line shock.
- Right-Angle Design provides larger lever area for better grip and easier control; permits nozzle to fit into awkward spaces close to walls and into corners.

- Drag Lugs protect the nozzle when dragged across rough surfaces; adds to long life with rough usage.
- Easy Spout Replacement the spout is simply threaded into the body.
 Replacement spouts are readily available from OPW.
- NPT Female Threads at Inlet End standard pipe threads accept all standard 11/4" and 11/2" male connections.

Design working pressure

50 psi (3.45 bar) maximum pressure

Manual Nozzle Accessories OPW 190 Ground Wire

The OPW 190 ground-wire assembly is designed for use on 295 series aircraft nozzles. The OPW 190WM is designed for use with the 295SA and includes a cable, attaching eyelet, ground plug and clamp. The OPW 190WF is for use with the 295AF aircraft nozzle and includes a cable, eyelet, ground plug and dust cap.

OPW Strainers

OPW strainers prevent foreign matter from entering fuel tanks. They are held in position by a tube and have a 100-mesh screen.

OPW 296 Protective Caps

OPW 296 Protective Caps are for use with OPW 296 and 297SA nozzle spouts. Each cap also comes with a chain and tension spring. The size ordered should be the same size as the spout O.D.

OPW RF400 Manual Utility Farm Nozzle

For General Utility Farm Usage

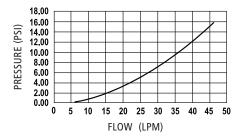

The OPW RF400 nozzle is designed for use in non-retail, commercial, industrial and agriculture use where an automatic nozzle is not needed.

Features

- UL-listed for use in gasoline, diesel and up to 10% ethanol blends.
 Specific listings available at www.opwglobal.com
- Manual Nozzle no automatic shut off.
- Built-in hanger for quick use in field.

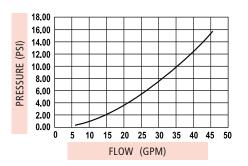

Design working pressure

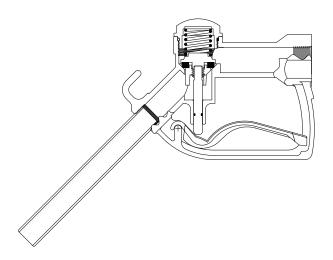

◆ 50 psi (3.45 bar) maximum pressure

OPW 66SP High-Volume Breakaways

The 66SP is designed for installation on fuel-dispensing hoses that require a substantial volume of flow, and therefore the potential for a high-volume spill.

The 66SP utilizes shear-pin technology to ensure separation at proper pull forces, and limit unwanted valve closures that stop or limit fuel flow. Once separated, a qualified service technician can easily repair the breakaway with an OPW 66PRK Shear-Pin Replacement Kit.

Materials

Body: Aluminum

Seals: Viton®, Buna-N and Fluorosilicone

Spring: Stainless-steel
Poppet: Aluminum

Weight:

66SP-5150: 1.93 lbs, .87 kg 66SP-5200: 3.80 lbs, 1.72 kg

66SP-5150

Features

- Pull Force the 66SP will separate with a maximum pull force of 600 lbs., and limits fuel spillage from either hose end.
- Easily Repaired after separation, the 66SP can be repaired and put back in service with the OPW 66PRK Shear-Pin Replacement Kit.
- Heavy-Duty Construction –
 physically designed for durability in
 high-volume environments, including
 a protective, nickel-plated body.
- Low Pressure Drop valve design ensures superior flow rate for high-volume fills.
- Special Seals special fluorosilicone (66SP-5200 only) O-rings help protect the valve in harsh, high-volume environments.

FLOW RATE-GPM (STODDARD SOLVENT)

Hose Retractors

Features

- Easy to Use the spring-loaded reel and stretch-resistant cable provide smooth and steady tension throughout hose extension and return.
- Easy to maintain the removable sideplate provides full access to the mechanism for easy tension adjustment and unit maintenance.
 A convenient safety thumb screw is provided to lock the reel in place during tension adjustment.
- Field Adjustable for Various Hose, Nozzle, Swivel, Breakaway
 Combinations – no need for upgrading components if a breakaway or swivel is added to the hose assembly. Simply change the tension setting on the spring-loaded hose reel.
- ◆ Multiple Mounting Options the 102 retractor housing is tapped on the top for bolting to overhead crossbars, and on the side for mounting to vertical posts. The 102 is available as a retractor kit (including post, retractor and mounting hardware) or as separate components. Models are also available for aboveground storage tank (AST) applications. AST models include a 44" (112cm) post with a freestanding base.

102 Spring-Balance Hose Retractor Instruction Sheet Order Number: **H15853PA**

102 Spring-Balance Single-Hose Retractors

102 Spring-Balance Single-Hose
Retractors keep excess hose off the
ground and out of the way, prolonging
hose life and reducing potential hazards.
The 102 Spring-Balance Single Hose
Retractor is a California Air Resources
Board (CARB)-certified Stage II
component for use with single and dualhose dispensers as per Executive Order
G-70-52-AM.

Post Mounted

NOTE: See OPW's Website at www.opwglobal. com for product instruction sheets, troubleshooting guides, how-to-use guide and to view the Do's & Don'ts at the Gas Pump video.

Features

- Easy to Install each model number designates a custom-designed retractor package that mounts in the canopy of a particular manufacturer's MPD. Packages are shipped complete with the appropriate number of retractors and all the necessary mounting hardware for a clean, professional installation.
- Easy to Use the spring-loaded reels and stretch-resistant cables provide smooth and steady tension throughout hose extension and return.

 Easy to Maintain – the removable sideplate provides full access to the mechanism for easy tension adjustment and unit maintenance. A convenient safety thumb screw is provided on each retractor to lock the reel in place during tension adjustment.

102 Spring-Balance MPD Hose Retractor Packages

102 Spring-Balance MPD Hose
Retractors keep excess hose off the
ground and out of the way, prolonging
hose life and preventing extra-length
hoses from cluttering the island. The
102 MPD hose retractors are especially
well-suited for use on Multiple-Product
Dispensers (MPD) with Stage II Vapor
Recovery hose/nozzle assemblies. The
102 MPD Hose Retractor is a California
Air Resources Board (CARB)-certified
Stage II component for use with MPDs
as per Executive Order G-70-52-AM.

OPW 100 Counterweight Hose Retractors

OPW 100 Counterweight Hose Retractors keep excess hose off the ground and out of the way, prolonging hose life and reducing potential hazards.

Features

- Easy to Use counterweights are precisely matched to each hose configuration to ensure that a minimal pulling force is needed throughout hose extension.
- Easy to Maintain the 100 has just two moving parts, ensuring a long service life with a minimum of maintenance.

 Multiple Hose Configurations – the 100 is available in a multitude of configurations to meet virtually any conventional or vapor recovery hose/nozzle configuration. Models are also available for air and water-hose applications to keep hoses clear of vehicles when not in use.

OPW 6221 AST Direct-Fill Aboveground Storage Tank Spill Containers

OPW Direct-Fill AST Spill Containers are designed to prevent spilled product from entering soil near the fill and vapor-return riser connections on an aboveground storage tank during normal tank-filling operation. The spill containers catch spillage to help prevent soil contamination and groundwater pollution. OPW Direct-Fill AST Spill Containers thread on the top of an aboveground tank and allow for drainage of spilled product back into the tank.

Dimensions

	Сар	acity	A	1	В		
Model #	gal. liter		in.	cm	in. cm		
6221	7	26.5	14 ¹ / ₂	37	17	43	
	3.5	13.2	91/4	24	17	43	

Features

- Easy Installation 4" NPT threaded base screws directly to the tank riser pipe. No further adjustments are needed
- Integral Drain Valve allows highspeed drainage of spilled product back into the tank
- Capacity available in 7-gallon (26.5-liter) container capacity. Larger 7-gallon capacity spill containers provide additional clearance for 61 fSTOP Overfill-Prevention Valves (3.5 gallon-221 only)
- Rain-Shedding Cover Design –
 hooded cover design helps prevent
 water or snow entry by extending
 the lip of the cover over the body of
 the spill container
- Welded-Hinge, Lockable Hatch

 the cover includes a provision

 for a padlock and a welded-hinge assembly for added security
- 12-Gauge Epoxy Powder-Coated Construction – heavyduty materials, compatible with hydrocarbons, for long service life and added security

- 6221AST Spun-Steel Design spun-steel construction provides a lightweight, one-piece design for easy installation and a clean, sleek appearance on aboveground tanks.
- All Models Are ULc-Listed clearly labeled to identify the listing

Features

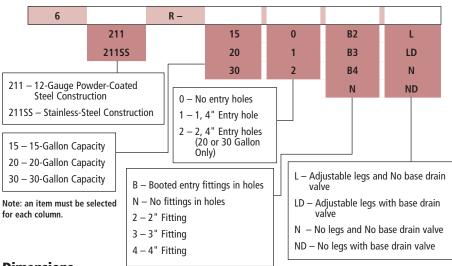

- Easy Installation a 4" flexible boot on the back panel allows for a quick, simple connection to the remote-fill or vapor lines. Optional reducer inserts are available to accommodate 3" and 2" piping connections
- **Models to Accommodate Various** Fill-Pipe Configurations – available in 15-, 20- and 30-gallon container capacity. Smaller 15-gallon models are designed for a single-fill or vapor-return connection. Larger 20- and 30-gallon models accept both fill and vapor-return piping in a dual-port configuration. The 30-gallon model will accommodate both fill and vapor-return piping in a singleport configuration and allow the use of 3" Dry Disconnects (OPW 1611AN and 1711D) in a dual-port configuration
- Rain-Shedding Cover Design hooded cover design helps prevent water or snow entry by extending the lip of the cover over the body of the spill container
- 12-Gauge Epoxy Powder-Coated Steel or 304 Stainless-Steel Containment Box – heavy duty materials, compatible with hydrocarbons, for long service life and added security

- Welded-Hinge, Lockable Hatch cover includes a provision for a padlock and a welded-hinge assembly for added security
- Easy Product Drainage lockable ball valve drain provides for quick and easy product removal
- Height Adjustable adjustable legs enable the spill container to be set at a variety of heights, from 161/2" to 30". Each leg is independently adjustable to account for uneven ground conditions
- Custom Sizes Available Upon Request

OPW 211-RMOT Remote-Fill **Aboveground Storage Tank Spill Containers**

OPW Remote-Fill AST Spill Containers are designed to prevent spilled product from entering soil near the remote, horizontalfill and vapor-return connections on an aboveground storage tank during normal tank-filling operation. The spill containers catch spillage to help prevent soil contamination and groundwater pollution. OPW Remote-Fill AST Spill Containers slip on the remote-fill and vapor-return piping connected to an aboveground tank. Compatible with methanol, ethanol, jet and AV-Gas fuels.

OPW 61fSTOP Overfill-Prevention Valves

The OPW 61fSTOP Overfill-Prevention Valve is designed to prevent overfilling of aboveground storage tanks by providing a positive shut-off during a pressurized-fill (pump-on fill) delivery. It threads into the fill opening and is an integral part of the fill tube. The 61fSTOP is fully adjustable to allow for easy installation in new or existing aboveground tanks of various heights and storage capacities.

The 61 fSTOP is a single-action, complete shut-off valve. When the liquid-level rises to your specific, pre-determined tank capacity, the valve mechanism is released and automatically closes with the flow of the product. Any excess product left between the valve and the fuel-delivery coupler is drained into the tank through internal drain vents. The drain vents on the 61 fSTOP act as an anti-siphon, by introducing air/vapor into the fill line, to help isolate the tank from a potential siphon due to a broken or leaking fill-pipe.

The 61 fSTOP, available in either 2" or 3" full-flow models, maximizes flow rates and minimizes delivery times. The 2" 61 fSTOP requires a 4" tank opening and minimum tank ullage (space from the top of the stored product to the inside top of the tank) of 8" on the 61 fSTOP-1000 Cylindrical Float model and a minimum ullage of 4" on the 61 fSTOP-2000 Float Arm model. The 61 fSTOP-1000, with the cylindrical float, eliminates the need to position the valve to avoid tank walls or cross-bracing. The 61 fSTOP-2000 with the float arm allows for increased usable storage capacity in the tank, and is wellsuited for small-capacity rectangular ASTs. The 3" 61 fSTOP requires a 6" tank opening and incorporates a cylindrical float requiring 8" of tank ullage space.

Materials

Valve Body, Adaptor and Collar:

Cast aluminum

Poppet: Cast aluminum,

hard-coated

Cam: Stainless steel

Follower: Brass

Shaft: CRS zinc-plated

Bearing: Sintered bronze

Float: Closed-cell nitrile

Nipple: 2" - 3" schedule

40 steel pipe

Lower Nipple: 2" - 3" schedule 40 steel pipe with Duragard*

coating

Features

- ◆ A Special Crossbar Tank-Inlet Adaptor — is provided with each Stopper to provide for tight-fills and help prohibit open-fills. Mounting hardware, upper drop tube and 14" lower drop tube provided (longerlength drop tubes can be purchased or added)
- Completely Automatic Operation no pre-checks to perform, no resets, and no overrides to be broken or abused
- ◆ Direct or Remote-Fill Compatible – fuel-delivery couplers can be connected directly to the 61 fSTOP, or steel pipe can be threaded into the top of the valve and piped to a remote location where the couplers are contained in a 211-RMOT Spill Container
- ◆ Integral Anti-Siphon Valve drain vents on the 61 fSTOP act as an antisiphon, by introducing air/vapor into the fill line after the valve actuates, to help isolate the tank from a potential siphon due to a broken or leaking remote-fill-pipe
- 150-psi (10-bar) Pressure Rated* with Low Pressure Drop – to enable quick, safe delivery of fuel into the tank
- ◆ 25 GPM (95 lpm) Minimum Flow Rate Required
- UL and ULc-Listed to satisfy thirdparty accreditation requirements of many jurisdictions
- Test Kits Available to allow for testing shutoff functionality without removal of the valve.

*OPW does not recommend pumping pressures above 100 psi for Class 1B fuels and we make no warranties for products use in conjunction with the 61 fSTOP.

NOTE: OPW recommends the use of the 61 fSTOP with clean product only. Debris and other products such as contaminated waste oil may cause improper operation of the valve.

NOTE: The 61 fStop can be used in gravity drop provided the minimum flow rate is maintained. A tight shut-off is not achieved in the closed position. However with a minimum tank size of 1,000 gallons, the leak rate will provide a 30-minute warning before the tank is full.

OPW 61FT Drop Tube

The OPW 61FT Drop Tube is designed to install on the bottom of the 61 fSTOP AST Overfill-Prevention Valves when a lightweight, longer, lower drop tube is required. Constructed of extruded aluminum, the OPW 61FT is connected to the bottom of the 61 fSTOP by a clevis and cotter-pin assembly, and allows for submerged filling of ASTs.

Spout Kits And Delivery Couplers And Accessories

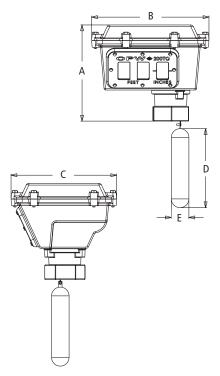

Fuel-Delivery Couplers and Accessories are designed to connect fuel-delivery transport truck hoses or nozzles to the fill-pipe of an aboveground storage tank.

Typical AST-Filling Application

OPW 200TG AST Mechanical Tank Gauge

The OPW 200TG Tank Gauge is designed for reading liquid-levels in horizontal or vertical aboveground storage tanks. The 200TG Tank Gauge provides an accurate numerical counter readout, eliminating the need for any on-site manual gauging.

Dimensions:

Replacement Parts:

Part #	Description
C05165M	Float
H15325M	Lens
H15267M	Lens Gasket
H14909M	Lid Gasket

Underwriters Laboratory Listed UL Listing MH29367. Liquid-level gauges which are intended to be used on aboveground storage tanks and monitor the level of petroleum-based flammable or combustible fluids.

Materials

Enclosure: Powder-coated aluminum

Swivel Base: Hard-coat aluminum

Float: 304 stainless-steel

Lenses: Tempered borosilicate

Gears: Acetal

Gaskets & O-Rings: Nitrile®
All Hardware: Stainless steel

Accuracy: + or - 2"

Features

- Vapor-Tight allows for standard tank-pressure testing and sealing up to 25-psig (1.72 bar)
- Angled Face improves visibility from ground on large-diameter tanks.
 May be read easily up to 30 feet away (9.14 m)
- Swivel Adaptor Base allows for 360° of rotation of gauge face for easy viewing wherever needed
- ◆ Easy Installation 2" NPT-threaded base reduces labor time, and comes standard with female thread. A H11421RS may be purchased for malethreaded applications
- Corrosion-Resistant Construction powder-coated die-cast aluminum body assures long service life in many fluids
- Drop Tube prevents float entanglement in the tank, and gives the gauge a more accurate reading when turbulence is present (Drop Tubes sold separately. They are recommended for use in tanks with high turbulence, and where other piping and structures inside the tank may cause entanglement)

 in all approved fuels with a specific gravity of 0.65 and greater
 Tank Height – unit designed for use

Float Buoyancy – designed to float

- Tank Height unit designed for use on any horizontal or vertical aboveground tank up to 18 feet (5.5 m) in depth.
 Specials available upon request
- Numbering black letters on white background for ultimate contrast and better visibility. Characters stand more than 1" (25 mm) tall
- ◆ Unit Measurement Can be purchased in metric units to read in meters, 1/10, 1/100, or in English units to read in feet and inches
- Maintenance No annual maintenance required
- U.S. Patent No.: 6,523,404 Other patents pending
- ◆ Compatible Fuels see chart on page 293
- ◆ Temperature Rating 120°F to -40°F (49°C to -40°C)

& stainless-steel rod

Pipe: Stainless steel

Tank Adaptor: Aluminum hardcoat anodized

Features

- Up to four alarm signals (444TA)

 can be used for high or low liquid-level sensing, interstitial monitoring, and/or other signals in one to four separate tanks
- Self-Powered lithium battery with a 10-year shelf life for long service life.
- ◆ Audible Alarm sounds a 90-decibel alarm at 4 feet away
- Visual Notifications red alarm light will flash during use for notification to the user. Low-battery light indicates when battery needs to be replaced
- Corrosion-Resistant Construction petroleum and environmental resistant housing and all-stainless-steel pipe fitting ensure long product life
- Product/Alarm Identification Label

 located on top of the alarm for quick

 and easy identification, allowing you to
 correspond alarms to signals. Label has
 a protective covering

Intrinsically Safe – complies with ANSI/UL 913 for Class 1, Division 1 & 2 for Groups C & D hazardous locations

- ◆ Cold-Weather Resistant all components are safe for temperatures down to -40°F operation (and up to 120° F)
- Long-Life Lithium Battery selfpowered by a lithium battery which includes a 10-year shelf life to ensure peace of mind for the owner
- Easy Installation requires no calibration and installs easily into a 1" tank bung. May be assembled remotely or directly on top of tank

Maximum Surface Temperature Classification:

T4 Surface Code

Wiring limitations: 1000-foot maximum between the 144TA/444TA unit and any remote switch for each channel of the alarm. This assumes that maximum capacitance for any input is 60 nanoFarads and that the maximum inductance is 0.2 milliHenry per input (UL-913 A7.3)

Note: This device is designed to work independently and should not be wired in parallel with another device, except as defined in the following instructions.

Requirements for devices wired to the 144TA/444TA:

- Attached wiring and devices must be classed Intrinsically Safe
- No voltage or current source
- Maximum capacitance: 60 nanoFarads (.06 uF) per input
- Maximum inductance: 200 microHenrys (.2 mH) per input Float Switch Technical Information:

Minimum liquid specific gravity: 0.45.

Stem material: Stainless steel. Float Material: Closed-Cell Buna-N (UL Approved) for gasoline services Max Pressure: 150 psi @ 70° F. Thread 1/8" NPT.

OPW 301 Emergency Vents

The OPW 301 Emergency Vent is designed to prevent an aboveground storage tank from becoming overpressurized by providing high-capacity venting in the event of a fire or blockage. The 301 is a weighted, mushroom-style emergency vent. When the AST builds pressure, the weighted cast-iron lid is forced up off its seat to relieve the pressure. When pressure is relieved, the lid lowers and is automatically reset. The appropriate 301 Series vent is determined by the emergency venting capacity requirements of the AST and the type of connection at the tank's emergency vent opening. The OPW 301 Emergency Vent is available in 4", 6" and 8" openings with female NPT, and male NPT to allow for easy installation in new or existing aboveground tanks. Various lid-pressure settings determine the initial venting of the valve.

Replacement Parts

Part #	Description
201877	4" Seal
202721	6" Seal
203325	8" Seal

Materials

Lid: Cast iron with powder-coated finish

Body: Aluminum

Shaft: Zinc-plated steel O-Ring: Buna-N

301 SCFH @ 2¹/₂ PSI (0.17 bar)

4"- 101,000 6"- 250,000

8"- 421,000

Features

- Automatically Resets weighted cast-iron cover reseats once the pressure in the tank is relieved
- Aluminum Body and Cast-Iron Lid
- Epoxy Powder-Coated Cover prevents rusting of the cover to protect expensive finishes on ASTs

 UL-Listed – to satisfy third-party accreditation requirements of many jurisdictions

- ◆ Alerts Tank Operators of Possible

 Venting Problems when the
 emergency vent is actuated, the lid
 remains open for inspection until
 manually reset. The actuation of the
 emergency vent indicates abnormal
 excessive pressure build-up in the tank
 due to either a blockage in the normal
 tank vent or in the event of a rapid
 expansion of vapors possibly from
 a fire
- ◆ 3-Point Vent Shear System —
 Ensures the vent safely opens every time, even if non-OPW replacement parts are utilized. Shear Pin breaks at 2.5 psi (0.17 bar), Break Link breaks at 3.5 psi (0.24 bar), and Bar breaks at 6.5 psi (0.44 bar).
- UL-Listed to satisfy third-party accreditation requirements of many jurisdictions

OPW 202F Emergency Vents

The OPW 202F Emergency Vent is designed to prevent an aboveground storage tank from becoming overpressurized by providing full-bore, high-capacity venting in the event of a fire or blockage of the OPW 23, 113, 523V or 623V. The 202F is a vapor-tight, spring-loaded emergency vent. When the AST builds pressure to 2.5 psi (0.17 bar), a break-pin shears and the springloaded lid opens full-bore and discharges vapors upward to relieve the pressure. The lid remains open for inspection, to indicate a problem with the normal tank venting or if a fire has taken place, until manually reset. The appropriate 202F Series vent is determined by the emergency venting capacity requirements of the AST and the type of connection at the tank's emergency vent opening. The OPW 202F Emergency Vent is available in an 8" flanged connection to mount directly to a tank manway.

Important

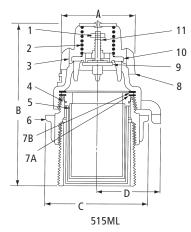

FlexWorks by OPW, Inc., VAPORSAVER™ and all other OPW products must be used in compliance with all applicable federal, state, provincial and local laws, rules and regulations. Product selection must be based on physical specifications and limitations, compatibility with the environment and material to be handled. All illustrations and specifications in this literature are based on the latest production information available at the time of publication. Prices, materials and specifications are subject to change at any time, and models may be discontinued at any time, in either case, without notice or obligation. OPW warrants solely to its customer that the following products sold by OPW will be free from defects in materials and workmanship under normal use and conditions for the periods indicated.

OPW Utility Tank Vents

OPW Utility Tank Vents are installed directly on the top of aboveground storage tank or utility tank vent pipes. The vent-cap is designed to protect the tank against intrusion of water, debris or insects. The 515ML incorporates a flame-arrestor screen for jurisdictions that require these on tanks. A normally closed poppet in the valve opens at a predetermined pressure or vacuum setting to allow the tank to vent.

OPW 23 Series Open Atmospheric Vents

Open Atmospheric Vents are installed on the top of vent pipes from underground or aboveground fuel storage tanks. The vent-cap and internal wire screen are designed to protect the tank vent lines against intrusion and blockage from water, debris or insects. These vents are always open to atmosphere and allow any pressure or vacuum in the tank to vent.

OPW 113 Series Open Atmospheric Utility Vents

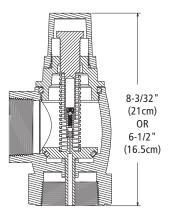

OPW 113 Open Atmospheric Utility
Vents are installed on the top of
aboveground fuel storage tanks.
The vent-capand internal wire screen are
designedto protect the tank vent lines
against intrusion and blockage from
water, debris or insects. These vents are
always open to atmosphere and allow
any pressure or vacuum into the tank to
vent. The 113 vents vapors downward
and is used primarily on diesel, fuel
oil, waste-oil and motor-oil tanks, but
can also be used on a wide variety of
aboveground storage tank
venting applications.

OPW 199ASV Anti-Siphon Valve

The OPW 199ASV Anti-Siphon Valve is designed to help prevent siphoning of an aboveground storage tank should a leak or break occur in the fuel-supply line. The 199ASV installs on the top of an aboveground storage tank with a suction rod on the inlet and the fuel-supply line (to a remote pump) on the outlet of the valve. A poppet in the valve remains normally closed, isolating the tank from siphoning. When the remote pump is activated, it overcomes a factoryadjusted spring set to a predetermined hydrostatic head pressure and allows flow of fuel out of the AST. An internal pressure relief valve helps absorb thermal expansion in the fuel-supply line. The 199ASV is available in female NPT threads with four different factory-adjusted hydrostatic head-pressure settings.

- ◆ 8³/₃₂" model for 1¹/₂" and 2"(20.55 cm model for 3.81 cm and 5.08 cm)
- ◆ 6¹/₂" model for 3/4" and 1"(16.51 cm model for 1.90 cm and 2.54 cm)

Materials

Body: Clear anodized aluminum

Bonnet: Powder-coated aluminum

Cap: Powder-coated aluminum

Spring: Stainless steel

Poppet: Hard-coated aluminum **Screw:** Hard-coated aluminum

Poppet Seal: Nitrile

199ASV

Features

- Factory-Adjusted Hydrostatic Head-Pressure Settings – allow for quick, safe and easy installation on aboveground tanks
- Internal Pressure Relief Valve –
 helps protect piping and fittings from
 damage due to thermal expansion.
 Set to operate between 20 to 40 PSI
 (1.3 to 2.7 bar)
- Aluminum Bodies compatible with gasoline, diesel, kerosene, ethanol, methanol, fuel oil and jet fuels
- ◆ Temperature Rating -20°F -120°F (29°C - 49°C)

Valve Rating ft of gasoline S.G. = 0.7

OPW 821 Solenoid Valve

The OPW 821 Solenoid Valve is designed to prevent accidental siphoning of aboveground storage tanks if a leak or break occurs in the fuel-supply line. The 821 valve is a two-way, normally closed diaphragm valve that opens when energized to allow fuel to flow to the pump or dispenser. Available in female NPT threads.

OPW 178S Series External AST Emergency Shut-Off Valve

The OPW 178S Series External AST Shut-Off Valve is designed to shut off product flow from an aboveground storage tank, bulk-loading rack or any place in the fuel-supply line in the event of a fire. The 178S installs in-line on fuel-supply piping. A fusible link attached to a spring-operated lever holds the poppet normally open. In the event of a fire, the fusible link melts at 160° F, allowing the spring-actuated poppet to shut off the flow of product in the fuel-supply line. The 178S is available in 2 " female NPT connections.

CLEANENERGYFUELING PRODUCTS

We are dedicated to continuous innovation in the design, engineering and manufacture of high-quality components used for alternative fueling applications, such as CNG (compressed natural gas). A division of OPW, the global leader in fueling solutions since 1892, CleanEnergy Fueling Products is a name synonymous with innovation, quality, reliability and customer service. OPW CleanEnergy Fueling Products offers you a complete selection of alternative fueling products to meet your specification. Each product is designed and built to exacting standards for your fueling safety and efficiency.

CNG Fueling Nozzles (NGV1 & ISO14469)

OPW CleanEnergy Fueling Products offers an extensive line of CNG Fueling Nozzles to meet a wide variety of fueling applications. OPW CNG nozzles are used throughout the world.

NT2AP30 (Type 2 or 3)

NT2AP36 (Type 2 or 3)

The NEW NT2A Series Nozzle is designed to be versatile for all of your Type-2 CNG-fueling applications. The NT2A has true Class-A specified durability and will optimize your time-fill, fast-fill and fleet-fueling sites. The ergonomic design, positive locking jaws and best-in-class internal seals will make this nozzle the preferred choice of your operators.

CNG Type-2 Fueling System

The OPW CleanEnergy CNG 3-Way Valve and Type-2 Nozzle features the latest in industrial and commercial fueling innovations. A fueling system which bridges the gap between convenience and comfort, without sacrificing flow or reliability. Ergonomically designed to be easy to use and prevent unnecessary wear and tear during the fueling process.

1000 Series (Type 1)

OPW 1000 Series Self-Service Nozzles are designed for high-flow public and private CNG-fueling systems. Applications include quick-fill, self-service fueling of automobiles, light trucks, shuttle buses and vans.

5000 Series (Type 1)

OPW 5000 Series Nozzles are designed for extremely high-flow public and private CNG-fueling systems. Applications include quick-fill, self-service fueling of transit buses and large trucks.

6000 Series (Type 2)

OPW 6000 Series Nozzles are designed for extremely high-flow public and private CNG-fueling systems when connected to OPW CL50 series receptacles. Applications include quickfill, self-service fueling of transit buses and large trucks.

BDN Vehicle- Defueling Nozzle

OPW has developed this tool to safely depressurize vehicles. This valve can also be used to transfer fuel from one vehicle to another in the event of a breakdown on the side of the road, or be used in areas where no refueling station is available.

OPW Listings and Certifications

Every year we introduce more safety and environmental-protection innovations to the industry than any other petroleum equipment manufacturer. Leading-edge innovations such as the new 1-2200™ single-wall replaceable spill container, 68EZR™ reconnectable breakaway, Fibrelite covers and tank sumps, decommissioning hanging hardware kits, the SiteSentinel®

Integra 100^{TM} automated tank-gauge systems all serve to illustrate how OPW is *Leading the Way* in helping to protect the well-being of people and the environment – today, tomorrow and into the future. That's the nature of OPW.

OPW STANDARD PRODUCT WARRANTY

NOTICE: FlexWorks by OPW, Inc., VAPORSAVER™ and all other OPW products must be used in compliance with all applicable federal, state, provincial and local laws, rules and regulations. Product selection is the sole responsibility of the customer and/or its agents and must be based on physical specifications and limitations, compatibility with the environment and material to be handled. All illustrations and specifications in this literature are based on the latest production information available at the time of publication. Prices, materials and specifications are subject to change at any time, and models may be discontinued at any time, in either case, without notice or obligation.

OPW warrants solely to its customer (the initial purchaser and any subsequent purchasers within the warranty period) that the following products sold by OPW will be free from defects in materials and workmanship under normal use and conditions for the periods indicated:

PRODUCT	WARRANTY PERIOD	
FlexWorks Primary Pipe	10 years from date of manufacture	
All Products and replacement parts installed in the State of California Certified to California CP-201 and/or CP-206 Standards*	1 year from date of installation (proof of purchase from certified contractors/technicians required) OPW warrants ongoing compliance with the standards and specifications for the duration of the warranty period required by the State of California; this limited warranty is under the condition the equipment was installed and maintained by trained and certified contractors/technicians unless noted in Installation Manual	
All Other Products	1 year from date of manufacture	
*Products certified to California CP-201 and/or CP-206 Standards have been factory tested and met all applicable performance standards and specifications and will have an OPW registration card enclosed/attached to the product		

OPW's exclusive obligation under this limited warranty is, at its option, to repair, replace or issue credit (in an amount not to exceed the list price for the product) for future orders for any product that may prove defective within the applicable warranty period (repairs or replacements are subject to prorated warranty coverage for remainder of the original warranty period). Complete and proper warranty claim documentation and proof of purchase required. All warranty claims must be made in writing and delivered during the applicable warranty period to OPW at OPW 9393 Princeton-Glendale Road Hamilton, Ohio, USA 45011, Attention: Customer Service Manager. No products may be returned to OPW without its prior

This limited warranty shall not apply to any FlexWorks or VAPORSAVER™ product unless it is installed by an OPW attested installer. This limited warranty also shall not apply to any FlexWorks, VAPORSAVER™ or other OPW product: unless all required site and warranty registration forms are completed and received by OPW within 60 days of installation; unless all piping connections are installed with a nationally recognized or stateapproved leak-detection device in each tank and dispenser sump (which are not for storage and from which all discharge hydrocarbons must be removed, and the systems completely cleaned, within 24 hours); unless testable sumps utilize FlexWorks pipe and access fittings; unless a sump inspection log or an EPA-recommended/required checklist is maintained and the results are furnished to OPW upon request; and unless OPW is notified within 24 hours of any known or suspected product failure and is provided with unrestricted access to the product and the site. This limited warranty also shall not apply to any product which has been altered in any way, which has been repaired by anyone other than a service representative authorized by OPW, or when failure or defect is due to: improper installation or maintenance (including, without limitation, failure to follow FlexWorks Quick Reference Manual Installation Guide and all product warning labels); abuse or misuse; violation of health or safety requirements; use of another manufacturer's, or otherwise unauthorized, substances or components; soil or other surface or subsurface conditions; or fire, flood, storm, lightning, earthquake, accident or any other conditions, events or circumstances beyond OPW's control.

THIS LIMITED WARRANTY IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, AND ALL OTHER WARRANTIES INCLUDING, WITHOUT LIMITATION, THE WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE, ARE HEREBY EXCLUDED.

OPW shall have no other liability whatsoever, whether based on breach of contract, negligence, gross negligence, strict liability or any other claim, including, without limitation, for special, incidental, consequential or exemplary damages or for the cost of labor, freight, excavation, clean-up, downtime, removal, re-installation, loss of profit, or any other cost or charges. No person or entity is authorized to assume on behalf of OPW any liability beyond this limited warranty. This limited warranty is not assignable.
