

Test Boots

FlexWorks Test Boots are used to isolate and air-test the interstitial space between the primary and secondary pipe. One test boot is required for each pipe end.

The QCJ-2512 and QCT-2512 models allow users to quickly close the interstitial space of the pipe for testing. New EPA regulations maintain that secondarily contained areas must be tested for tightness after repairs and this hardware saves time and money on labor when tests are necessary.

- QCJ-2512 (Junction) is used for pass-through UDCs, and the QCT-2512 (Termination) is used to terminate the run.
- Quick-close system allows for open systems to be closed and tested in minutes.
